Reagan urges support for Central America

WASHINGTON (AP) — President Reagan urged the nation and a skeptical Congress yesterday night to embrace his Central America policy on grounds that the United States has a "vital interest, a moral duty and a solemn responsibility" to protect the region from Leftist revolution.

In a rare address to a joint session of Congress, Reagan said, "I say to you that tonight there can be no question, the national security of all the Americas is at stake in Central America. "If we cannot defend ourselves there," said Reagan, "we cannot expect to prevail elsewhere. Our credibility would collapse, our alliances would crumble, and the safety of the homeland would be put in jeopardy."

Reagan's nationally broadcast address was primarily an attempt to salvage a proposed $10 million in U.S. aid for the besieged regime in El Salvador. Congress so far has balked over all but $30 million of that. But Reagan pressed Congress to approve his full request for aid for all of Central America, totaling about $600 million for 1984. "That is less than one month of what Americans will spend this year on coin-operated video games," the president said.

"What the administration is asking for is on behalf of freedom in Central America is so small, so minimal — considering what is at stake," he added.

Reagan said the Caribbean Basin region is "a magnet for adventurers" primarily sponsored by the Soviet Union and Cuba. "If the Nazis during World War II and the Soviets today could recognize the Caribbean and Central America as vital to our interests, should not we also?" he asked.

Reagan noted the seizure in Brazil of four Libyan cargo planes loaded with arms enroute to Nicaragua, and said "violence has been Nicaragua's most important export to the world."

"It is the ultimate in hypocrisy for the unselected Nicaraguan government to charge that we seek their overthrow when they are doing everything they can to bring down the elected government of El Salvador," said Reagan.

Disputing charges levied in Congress and elsewhere, Reagan said.

Population density increases in America

WASHINGTON (AP) — Americans are getting closer to each other. It's a question of denseness. It's a matter of numbers. The increase in population has increased population density by more than half over the last 30 years.

The 1990 Census found an average of 64 Americans per square mile; up from 42.6 in 1960.

New Jersey is the most crowded state; there are 986.2 people per square mile. Alaska is the emptiest — only 0.7 people per square mile.

Population density in the 49th state has more than tripled since 1950 when it had 0.2 per square mile. The growth in New Jersey was close to the national average; climbing by 53 percent from 642.8 over three decades.

Overall the census counted 226,546,000 people in 1980, up from 203,502,000 a decade earlier and from 179,323,000 in 1960 and 151,326,000 in 1950.

While the population has shifted toward the Sunbelt in recent years, the Northeast remains the most densely populated region by a wide margin.

The Middle Atlantic states averaged 369.1 people per square mile in 1980, up from 300.1 in 1950. New England — the second most closely packed region — had 196.0 people per square mile; up from 147.5.

Career outlook glum for graduates

By BOB VONDERHEIDE

Nearly 75 percent of the Notre Dame chemical engineers will graduate this year unemployed.

The top students with grade point averages approaching 4.0 are rarely receiving more than one job offer, and students with a modest GPA of 3.0, who used to receive three to four offers with starting salaries well above $20,000, are failing to get second interviews.

The career news in most other fields is no better. Civil engineering, liberal arts, and management are suffering while finance, accounting, mechanical engineering and science are far more tightly brokered, according to statistics of Notre Dame's Placement office.

"The outlook is slightly worse than last year," said Placement Director Richard Willem. Less than half of the students who have reported in have a definite job offer, he said.

The College Placement Council reported last week an even poorer picture nationally, with only half as many students as last year receiving job offers.

"It may be the toughest year since World War II," said John Singleton, director of placement at Michigan State University, who conducted a national survey of placement bureaus last fall.

"It's not a question ofienship. It's not a question of the national security of all the Americas is at stake in Central America. It's not a question of efficiency. It's not a question of sponsoring a policy that we seek the overthrow of when they are doing everything they can to bring down the elected government of El Salvador," said Reagan.

Disputing charges levied in Congress and elsewhere, Reagan said.

Student completes sea program

By VIC SCIULLI

Assistant News Editor

Learning about the sea can be adventurous and challenging, according to a Notre Dame student who recently completed a journey to exotic sites as part of a University program.

Sean Kerwin, a junior chemistry major, recently completed a 6-week study at sea as part of the Sea Semester program. Sea Semester is a college level course designed to teach undergraduates about the sea.

The program is divided into two components; six weeks of coursework in Woods Hole (located at the port to Martha's Vineyard), followed by six weeks aboard the schooner Westward where students had the opportunity to work on research projects.

At Woods Hole, students completed three courses: Introduction to Oceanography, a course based in biology, geology, chemistry and physics, with special emphasis on the geographic area to be visited during the cruise; Introduction to Nautical Science which taught concepts of navigation, naval architecture, ship construction, marine engineering systems and ship management, and Introduction to Maritime Studies, a multi-disciplinary study of maritime heritage, which examined how the oceans have influenced history, politics, literature and economics.

Classes ran from 8 a.m. to 4 p.m. five days a week, with classes held only half-days on Saturdays. Kerwin said that his courses weren't as demanding as many of the chemistry courses he has taken over the years.

Kerwin became interested in the program when he saw a sign outside of the Dean's office. At the time, he was uncertain of his future and could not decide between a career in pure chemistry or one in applied chemistry.

At lunch that day, Kerwin happened to sit down next to a student who had just come back from Sea Semester. He became more interested after

The festive spring atmosphere that characterizes this time of year may strike one as ironic in terms of the snowballing academic load. This time of year — hectic for all — is as extensively active period for one group: the graduating seniors. In addition to the missed classes, long papers and all-nighters, the seniors have the additional task of having to take up the cold mirror of reality. For some seniors this means a few last minute scrambles toward good graduation jobs along with the additional worry of whether they will be graduating. For others, this is based on the chance to be as irresponsible as possible before accepting the challenges of the real world.

Attention should be more than a frantic fight with academic requirements. Otherwise, this will be the extent of their responsibilities. Graduation also means taking time to realize the culmination of one’s (or more) years here.

The Hampton mansion was purchased by the federal government in 1815. It was previously owned by St. Mary’s. The concert will feature a variety of music, including folk songs, gospel tunes, hymns, popular pieces and classics. The concert is free and open to the public.

A happy medium between the two extremes is possible. All seniors must take some time out to do the next few weeks to examine themselves and their values. The word “commitment” is a beginning; the idea of something new. Every commitment, however, is based on a foundation. Everything is based on what comes before it.

In many ways life is comparable to a cross-country journey: You start out on the east coast and slowly make your way across the country. Of course, you’re bound to run into a few NewWarks and Toledos along the way, but you can accept and enjoy these adventures. As you travel, you pick up various friends — passengers — that make the trip more pleasant. Ultimately, however, you’ll have a job to fill, an intermediary — such as Chicago — and you must change vehicles and go on.

In less than two weeks, since seniors had perhaps their first real taste of freedom, will have to deal with the concept of a real job. Up until here, there have always been others — parents and schoolmates — to lean on. Coming to college was really a dress rehearsal of the real world. This time of year — hectic for all — is one of making the transition to the real world.

Making this trip alone is not important. Seniors should not be too quick to take on the additional responsibilities of spouse and family. This will probably be the only time in their lives that they will have only themselves to worry about. The time should be viewed as an opportunity to learn responsibility for oneself before making any life-long commitments.

The diploma handed out at commencement will signify much more than the sacrifice of a sheep. One’s education should be used as a stepping stone to self-awareness. Only with the proper experience upon reaching Chicago will the graduates make a conscious choice between pulling off the highway at Peoria or continuing on its life’s journey.

The views expressed in the Inside column are the views of the author, and do not necessarily reflect the views of the editorial board or stint.
The Observer continued from page 1 of Midwestern employers are planning to increase hiring levels in May. The Manpower study, however, did not explicitly consider college student employment.

The drop in job offers to college graduates, the College Placement Council said in its report, does not necessarily mean a drop in the number of jobs available. "In a more competitive year," a CPC spokesman said, "employees frequently had to make numerous job offers to fill a position, especially in engineering. But due to the tight job market, many students are accepting jobs earlier, often after only a few offers, and employers don't have to make as many offers."

Here's the outlook:

• Engineering: Except for electrical engineering, the number of job offers is down sharply — 16 percent in chemical engineering, according to the MSU study. Civil engineering is suffering because high interest rates have drastically decreased capital expansion, Willemin said. Recent cutbacks in government funds by the Reagan administration have also hurt industrial projects.

• Business Finance majors are finding relatively little change in the job market, as some major banks including Citibank and Bank of America in California actually increased hiring. Accounting majors at Notre Dame, usually strong in the job market, are receiving slightly fewer job offers than last year. Marketing majors will find a small decrease, the MSU study predicted.

• Science: Computer science students are receiving several job offers and the surge will continue for the next 10 years. Physics and math (except students who also have computer backgrounds) are experiencing modest to steep decreases. But Willemin said health care companies have begun to hire more and more Notre Dame biology and microbiology students.

• Arts and Letters: "A kid is going to have a tough time selling an employer on a philosophy degree," said Steven Salway, director of placement at New Mexico State University in Las Cruces. An economics degree is looking the best this year, but, Willemin said, "liberal arts students traditionally face an uphill battle to get involved in business." Students with concentrations in computer applications, however, are finding as much success as the electrical engineers. "I would hope that we have 50 percent placements by May 1," said Willemin. "By September 1, most students will have some type of job, but not necessarily in their career fields."

If your goal is to become a professional, you owe it to yourself not to overlook any opportunities that will help you reach that goal. THE NAVY PILOT (20/20 vision is required) is the finest in the world, flying a variety of sophisticated high performance aircraft. THE NAVAL FLIGHT OFFICER (vision correctible to 20/20) is the quarterback of the Naval Aviation Team with wide-ranging expertise from state-of-the-art Data Processing to Master Tactician. If you are a college graduate, or are within three years of graduation, wanting to get your feet off the ground and earn over $27,000 a year within four years and attend the world's most prestigious flight school, contact or mail your resume to:

WANT TO FLY?
EARN OVER $1000 A MONTH.
AND OPEN THE DOOR TO A TOP
ENGINEERING FUTURE.

How many corporations would be willing to pay you over $1000 a month during your junior and senior years just so you'd join the company after graduation? Under a special Navy program we're doing just that. It's called the Nuclear Propulsion Officer Candidate-College Program. And under it, you'll not only get great pay during your junior and senior years, but after graduation you'll receive a year of valuable graduate-level training that is not available from any other employer.

If you are a junior or senior majoring in math, engineering or physical sciences, find out more today. And let your career pay off while still in college.

said the United States was not seeking the overthrow of the leftist government of Nicaragua. "Our only interest is to insure that it does not infect its neighbors through the export of subversion and violence," the president said.

In a warmup for the prime-time speech, Reagan told a newspaper publishers' meeting in New York that Americans are not accustomed to worrying about possibly a military threat in our own hemisphere. "We've almost taken for granted the friendly, independent neighbors that we have."

... Reagan

But "we can no longer ignore that there's a fire started and burning in our front yard," he told the newspaper executives.

His speech in the House chamber marked the first time Reagan addressed lawmakers on a foreign policy issue. Usually presidents address Congress only to give the annual State of the Union report.

The speech came one day after the House Appropriations subcommittee chopped in half his request to shift military aid worth $60 million to El Salvador from amounts allocated for other countries. At that, the panel approved the lesser amount by just a one-vote margin.

GRADUATION CHAMPAGNES, NOW!
their discussion and decided to apply. Kerwin said that the students in the program were from a number of schools across the country. Not all the students were science majors. One English major from Dartmouth, he said, had a more difficult time getting through the courses but completed them nevertheless.

Students taking the course earn a full semester's credit from Boston University.

Woods Hole is the center for many scientific groups and industries, including the National Geographic Survey and the National Oceanographic and Atmospheric Association. Kerwin described Woods Hole as "a quaint town" where there were tremendous opportunities to meet people and do things. "There was too much to do and too little a time."

After the five week course at Woods Hole, 26 students and teachers set sail from Miami on the steel-hull sloop, Antilles. Most of the students and Kerwin said that there was some confusion at first about what to do. "After the first week, we kind of knew what we were doing," Kerwin said. "The cruise track included port stops in the Bahamas, Haiti, Roatan and Kewin said that there was some utilization many of the principles learned in his chemistry classes over the years. Because of his great knowledge of chemistry, Kerwin was in charge of the many chemical assays taken during the cruise. Kerwin is currently an undergraduate researcher in chemistry and is working on the synthesis of beta-lactams.

Kerwin described the semester as "very disciplined and structured." One of the goals of the semester, he said, was to make the students feel akin to the sea. "No tape decks, radios or stereos were allowed on board the schooner but musical instruments were encouraged," he said.

Kerwin said that he learned a great deal in the semester and realizes the incredible opportunities which he has experienced that would have normally been impossible and recommends it to anyone interested in learning more about the ocean.

The February Scholastic article raised another concern related to the question of federal aid (Military or otherwise). The author states: "part of the reason for the increase (of ROTC members at Notre Dame) lies in the scholarship opportunities initiated by Congress in 1981." Most students who receive federal aid will remember that it was in that very same year, 1981, when Congress decreased much of the other student assistance, such as Pell grants, SEOG, and as well as some of the federal loan programs. When one considers this phenomenon, an increase in military student scholarships and a decrease in non-military student scholarships, one realizes that what actually occurred in 1981 was not a "drastic cutback" in student federal aid but rather a transfer of that aid from students not in the military programs to students who are in such programs.

As a Christian, I see such a phenomenon as a tragic and unfortunate for all students concerned. I say for all students because not only were those of us who once received such aid hurt by the cutbacks, but also many students who otherwise never would have done such foolish things as promised some basic egotistical values just forced to do so as the only means of paying their tuition costs.

In response to such a tragic scenario, I advocate two proposals that as Christian students, we oppose any such transfers of federal aid from non-military usage to military usage, in the same as a replacement to the ROTC scholarship (and program) at Notre Dame; we develop and institute some type of alternative scholarship fund, for which Christians who are dedicated to peace might contribute, and from which students who are qualified for yet otherwise could not afford Notre Dame, might draw. If such an alternative scholarship program is not receive the necessary funds through ordinary contributions, then those Christians who believe in the value in such a fund could withhold that percentage of their federal taxes which goes to the military establishment and contribute the difference to the money to the scholarship fund. This "alternative scholarship fund" is obviously just a suggestion and would require much work and imagination to implement, yet it certainly does not seem impossible, non- desirable, or unnecessary.

Another area of major concern involving ROTC and the Catholic faith involves a question of loyalty - loyalty to the nation (and its military leaders) versus loyalty to the Church (and its leaders). For example, in the case of Catholicism in the United States this was not a question of loyalty to one or the other, they both seemed to go hand in hand." And the Church was, for the most part, supportive of the state.

Col. Webster of ROTC at Notre Dame, in another Scholastic article, summed up this historical viewpoint quite well when he stated that Notre Dame "always supported the military" and that the "moral responsibilities that Catholics have typically had to support the national as well as the Church."

What happens when the Church has stated concerns directly against a certain governmental policy, yet the ex-ROTC non-military personnel is ordered to maintain that policy? Obviously, the answer is not a hypothetical one, for on two major United States policy positions in recent years, one concerning American involvement in El Salvador and the other concerning nuclear warfare, the leaders of the Catholic Church in this country has publicly criticized and condemned that policy. To which does the post-ROTC student remain loyal, the Church or the military establishment? If the military and Catholic institutions were not so intertwined, as the ROTC program is at Notre Dame, then such a question of loyalties would not arise.

The bishops state in their letter, "We are coming to a fuller awareness that a response to the call of Jesus is both personal and demanding... To obey the call of Jesus means to separate oneself from all attachments and affiliations that could prevent us from hearing and following a true and authentic vocation." ROTC at Notre Dame is such an attachment or "affiliation" and thus should be removed from this campus.
Traveling the great interstates of our land is not unlike undergoing a frontal lobotomy. Ribbons of poles and wires extend to infinity, acres of bland land roll past, occasionally, an interchange leading to some obscure town will appear. However, if you are like most drivers, you are numbed by the rotating digits of the speedometer. Upon reaching your destination, friends may ask "how was your trip?" The answer is not easy — if you have traveled in the East, all you can remember is Ohio, through the West, it's probably the parade of shodded desert varmints. God help you if you ventured through Kansas or Nebraska.

Once upon a time, there were no interstates. Not only was car driving not so easy, it was much more adventurous, and a heck of a lot more interesting. The roads were not straight, or even to our standards, curved. Just as you would slow up speed, another hamlet would appear around the bend. Although not as efficient as a crest-mount road, it was hard to get bored, because in each of these little burgs, and not in some tangential stream, can be found the real America. The trains and buses claim to let you see America, but really you see America's backyard on the train, and America's depository on the bus.

An easy way to touch our nation's soul can be found on the backroads. Overlooked by both the media and the tourist lines of the multi-lane roads are the secondary roads, the roads which have grown into their autumnal aspects. In their heyday these routes were the nation's arteries, like U.S. 66, whose dotted lines a whole generation followed to populate the west. Today these roads are content to provide passage for farmers going to market, and their sons and daughters out to wear the pick-up.

In Blue Highways, William Least Heat Moon sets about finding national insight and personal inspiration. Moon had been a teacher in Missouri when the pink slip arrived. The next day he hit the road, sleeping in his van and following the blue Highways (traditionally, secondary roads are dotted on maps in blue ink). He found more to them than the color of ink, as he says in his opening statement.

On the Blue Highways maps of America, the main routes veer red and the back roads blue. Now even the colors are changing. But in those brevities just before dawns or dawns just after the night — the old roads return to the sky of some its Them. Then, in truth, they carry a mysterious cast of blue, and it's that time when the pull of the blue highway is strongest, when the open road is a beckoning, a strangeness, a place where a man can lose himself.

During his trip, Moon hit such honchos as Nameless, Tennessee, a long-abandoned town, the Zion Country of Louisiana, and a place of his ancestors in New York. Moon is an American Indian, which makes his journey even more striking. Though national Geographic has done first and better, and thus is a chronicle of things that are not special people, they are not the dog-faced boys, three-legged lads, or other eccentrics, but rather the stories of a man and woman. Photographs by Moon, not only the pink slip, but in a place where a man can lose himself.

In Blue Highways it is an experience to read. The author chooses not to begin his journey, but the country's, the nation's, the带着选项的困惑。他强调了国家在想法的紧迫性中的重要性，并提出“当然，国家政府不能帮助这些不可分离的组织。但是，舞蹈的喜剧可能帮助建立国家的声誉。”

His language is simple and straightforward. Consequently it is not necessary to quote anything. Moon particularly has this simple insight. It is a gift. We cannot convey it properly.

Interwoven throughout the text are Moon's own quotations from scripture. These quote do, however, break the monotony of the author's own words. In this detail, Moon recognizes that the reader is not the last word. That his words convey the story is, in fact, difficult to write about. The author can talk about the text's plot and counterplot, as well as the world of terrorist activity on the continent.

Kurtz, the Israeli intelligence officer, is charged with the responsibility of handling this elusive political force. Like the man he pursues, Le Carre prefers to do his dirty work with the assistance of a bloodthirsty private army. The competition between the two men is intense: both are adventurers — ruthless, vicious, and not above resorting to any and all tactics necessary to achieve their overall objectives.

Unlike his prey, Kurtz does not choose to work alone; rather, he exalts the aid of his old friend Joseph, a veteran of the Israeli special forces, and Charlie, a beautiful young English actress. It is through her eyes that Le Carre ties together the story's plot and counterplot, its internal and external dramas. As he takes his characters on a whirlwind chase throughout the cities of Europe and Palestine, the drama unfolds through Charlie's performance in which Kurtz calls "the theater of the real. Indeed, it is through Charlie that the reader is introduced not only to the conflict, but to its still and well.

In order to avoid the potential reader's appetite, I do not wish to reveal one of the plot except to say that anyone who loves a suspenseful work set within a modern historical context will not be disappointed. Although the book is a bit difficult to get into at first, it is worthwhile the effort to get involved and delve into its contents. In my opinion, it is a rewarding endeavor, because of the perspective on the Israeli-Palestinian conflict which Le Carre provides.

Many times, it is difficult for me to understand the rationale behind the intense emotions which play such a vital role in the Middle East. For two groups of people, home is home, sanctuary, identity, and freedom, indeed, survival. In Too Little Drummer Girl, Le Carre attempts to — and does — personally those aspects of the conflict within an intriguing framework.
Nolan Ryan of the Houston Astros broke one of baseball’s most durable records when he struck out the 3,509th batter of his career in the eighth inning of a game against the Expos. The victim was pinch-hitter Fred Mills, who was caught looking at a curveball on a 2-1 count. Ryan broke the record held by 55 years with Wally Johnson, Hall of Famer from the Boston Red Sox and Senators. By the way, the Astros — and Ryan — won 4-2. — AP

The ND-SMC Sailing Club will host the second annual Clean and Sweep Regatta for club members this weekend. Interested members should attend tonight’s meeting in the boat house at 6:30. Everyone is welcome to attend. — The Observer

An informal afternoon of Ultimate Frisbee will take place Thursday, April 28, at the Kresge Law School Quad. A full Saturday game will be sponsored by the Ultimate Frisbee Club. Baseball team loses doubler headed to BG

By NEAL SMITH

The University of Notre Dame lost a 10th of its last 11 games, the Irish baseball team was defeated 4-1 and 7-2 yesterday at Bowling Green State University. "We just didn’t score any runs. It’s the same old story all the time," commented Coach Larry Gallo. "They (the players) felt as though we couldn’t get up to speed for the second game. "For the season, Notre Dame, bowling Green, Saint Mary’s, and 117 runs compared to our opponents’ 290 average and 169 runs. In the opening game against Bowling Green Falcons, the Irish collected only three hits. After two first inning runs by the Falcons, Notre Dame picked up its lone run on a double by centerfielder Steve Pronzato.

In the third inning of the second game with one run and the bases loaded, Bowling Green’s Jeff Law was on second base with the bat. The Falcons’ John Basy in hit Stonkaws’ first pitch to hit it for a double and score the double for a grand slam. Basy had been called out on strikes two weeks ago against the Central Michigan with the bases loaded and two outs. Bob Hickey replaced Stonkaws (1-3) and proceeded to give up a single and a double, making the score 0-4 in the fourth inning.

In the sixth, Notre Dame made it 6-2. Rick Chesty’s solo home run and Jim Del had a run scoring double.

The Obser...
Bears hope for great things from Duerson

By MIKE SULLIVAN
Assistant Sports Editor

Dave Duerson, one of last year’s co-captains, is out to prove that 3 is not just a bad number — and has a good chance to do it as he joins the Chicago Bears. He was the 13th defensive back chosen in Tuesday’s draft as the Bears picked him up as an eighth rounder at Notre Dame and that’s fine with me,” said Duerson.

“Telly (the Bears told me) I’ll play on the corner,” said Duerson. “I played there for my first two years at Notre Dame and that’s fine with me.”

Duerson, who was the 64th pick overall in the draft and the fourth choice of the Bears, is also happy to be playing for the Bears. Not only is he the type of player that needs a lot of help, but it is also close to his home in Muncie, Ind.

In addition to playing cornerback, he may also be used by the Bears as a punt returner to help out the Bears.

Whether he will be used as a starter at this position is still uncertain, but, because punt returners do not mean that he will be a starter for long.

Meanwhile, Duerson will try to live up to his scouting reports as someone who has a speed to cover on passes and his toughness to come up to stop the run.

those two positions for the injury-riddled offensive line of the Blitz.

Thayer, a Jet, Illinois native, was drafted earlier in January by the Blitz. He admitted that he was more attracted to the USFL because it would be less of a risk.

“I signed with the Blitz because I always wanted to play in my home town,” Thayer said. “This was assured. In the other league, it was only a chance at 28, and the Bears never even said that they were that interested.”

They’re the Bears, and the Bears never even said that they were that interested. Washington, Philadelphia, Miami, and Detroit all expressed more interest in me."

On Tuesday, only hours after putting his name on the dotted line, Thayer was already playing for the Blitz. Allen said that Thayer may even see action in the Sunday’s game in Los Angeles.

The thought doesn’t bother Thayer one bit.

“I’ve lost 25 pounds from a foolish 290 something I played in the Hula Bowl. I lost from January in a serious playing weight of 267,” he said. “I’ll play tomorrow.”

continued from page 12

Coordinator Tom Lichtenberg, Hunter was positioned at wingback, an all-around offensive touch which called for Hunter to perform as a running back and a receiver. This experiment backfired after five games, and he was switched to wide receiver, then tight end, as Hunter searched for an offensive home.

“I’m not the least bit concerned about what happened to him in college,” said Stephenson. “He’s a Kellen Winslow-type player who can line up on the line or wide out. He can be a tight end and a fullback, or a halfback, or a halfback and a fullback, or a halfback and a wideout.”

“I think he has been blessed with the same type of ability (as Winslow),” said the product of Cincinnati’s Moeller High School.

“The only difference that Winslow is an All-Pro and I have to prove myself.”

Hunter flew from the draft in New York to Washington to meet with Bears GM, Bob Bennett, and will be in Buffalo for a press conference Monday.

 MANAGEMENT INTERNS

Glendale Federal is currently seeking highly motivated men and women for its MANAGEMENT INTERN PROGRAM. Enthusiastic individuals with a 4-YEAR DEGREE (prefer Business), who possess LEADERSHIP QUALITIES are needed to help meet future management needs. Eighteen-month program provides an overall perspective of an expanding financial institution and offers the right individuals rewarding and challenging career opportunities.

For immediate consideration, please send your resume with salary history to Employment Department.

Tuesday May 2, 1:00 - 5:00 PM
behind Student Center.

Deposits will be returned.
Offensive unit makes progress

By THERON ROBERTS
Sports Writer

Going into spring drills, offensive coordinator Ron HUDSON had two major goals for his offensive unit. "The two things we felt that we really needed to do in the spring were to get the players to really understand what we were doing and to get a good feel for it," says Hudson. "Also from a coaching standpoint, to be comfortable with all of the different things Coach Faust wants.

Even though Hudson terms the work of the offensive unit in the spring as a success, he still sees a little improvement possible in the fall.

"We'll be trying to solidify our passing game and simplify our pass patterns to benefit our receivers and prepare them for the season," he adds.

A rash of injuries in the last two weeks has hindered the progress of several major accomplishments of the spring.

Although quick tackle Mike DERN and strong guard Mike PERRINO are still sidelined and will not suit up for the Blue-Gold game on Saturday, Tight end Brian BEHNER jammed his neck in practice yesterday but probably will play.

"I don't anticipate that we will be platooning our running backs unless things change in the fall," notes Hudson. "Right now we would like to be at least as deep as we were in the backfield.

"Last year, the Notre Dame offense at times could be described as inconsistent and frustrating, as it could go from one game to the other in the three games against Michigan State, Miami and Arizona.

"Another oft-revised criticism of the offense in 1982 was that the Irish coaching staff was too conservative and predictable in calling plays - the game of Carrer, Hunter, then bring on the punter, as one observer wryly puts it.

"What about fullback Larry Mortality? Why did he rush only 49 times in the last eight games after having 47 carries in the first three?" Hudson attributes changes in game plan from week to week as the cause of that disparity.

"The teams we played took it (a part of the offense) away, so we had to do something else," Hudson explains. "If we execute the plays called for in the game plan, we can move the football against the best teams.

"What about the many passes completed for gains of five yards or less? We have been working on intermediate and longer pass routes, as evidenced by last Saturday's scrimmage, and I am pleased with the progress of Blue (Kiel) and the receivers.

The Irish offense has a chance to look at its capabilities in Saturday's Blue-Gold Game. Notre Dame football's spring showpiece.

"I hope we can move the ball well enough to win, and end the spring in a positive way," Hudson said jokingly.

Spring Football '83

Coach Tom Callah's men, now 11-11, enter their regular season in style yesterday afternoon under sunny skies at Courtyard Tennis Center as the Irish dominated their Bowling Green Green, 7-2, to finish with an overall 23-9 record before this weekend's conference championships.

Finishing the regular season on a high note, the Irish completed a six-match winning streak with the victory over the Falcons. The team's peak came just in time for the end of the season, and the players are hoping to carry it through the Midwestern City Conference championships.

Senior captain Mark McAllister won his sixth straight at No. 1 for a 1st round/12th seed as easily downed Fal­ cor Gary Conlon, 6-4, 6-2, while sophomore Dave Noonan, playing No. 2, was too much for the Westerners.

Tony Hunter, who never quite grew comfortable enough at Notre Dame to become the superstar recruits thought he would be, had his finest season topped Tuesday by his selection to the first-round selection, the 12th overall pick in the entire National Football League draft.

"We were quite surprised to see that Tony was still available," said Stephenson. "We had him rated as the third best player in the nation behind (John) Elway, (Eric) Dickerson and (Curt) Warner.

"The native of Cincinnati had originally wished to be drafted by a warm-weather team (he had been rumored to be going to the Los Angeles Rams until LA traded up in the draft), but expressed great interest in being selected by the Bears.

"I met Coach Kay Stephenson at a scouting combine in Seattle," Hunter said. "Hed say that if they took me he'd go back the ball up a bit more." Buffalo's attack had keyed in his recent years on running back Joe Cribbs. Whatever the reason, Hunter continued on the run to go deep and take the pressure off their receivers.

The intestinal position switches for the 6-5, 225 lb. receiver were an unexpected four years with the Irish. Touted as Notre Dame's best offensive athlete by Head Coach Gerry Faust and Offensive Coordinator Rick Christopherson, the 1981 team (he had been rumored to be going to the Los Angeles Rams until LA traded up in the draft), but expressed great interest in being selected by the Bears.
