Cable installation makes Haggar 'student-friendly'

By MAUREN KORZA

Cable has finally been installed in the Student's Union on the Haggar Center campus. Students can now watch their favorite cable channels in the Union.

Usage of the center was an idea promoted on the Board of Governance Haggar Renovation Survey issued to students in 1990. The students responded favorably when the surveys were dispensed, according to Rosenbush.

"I'm really excited about the cable because there will be more than three channels," said Michelle Meredith Johnson. "Also, I can get to bed earlier the nights Melrose Place is on instead of waking up until 1:30 a.m.\textsuperscript{,}\" she added.

Freshman Megan Driscoll said she is also happy about the cable installation. "I'm at Haggar a lot at night so it will be fun to stop in the Game Room and watch television and soccer,\" Driscoll added. It's a step in the right direction for our student center, said sophomore Charity Bocan. "They wanted to attract more students to Haggar and with the new TV's, the students will be able to enjoy more shows such as 'Frasier' and 'Sunnydale.'\"

Space Shuttle memories

ND grads speak on recent flight, Russian venture

By TOM MORAN

Detailing his rendezvous with the Russian space station, Mir, astronaut Jim Wetherbee, who commanded the shuttle Discovery, spoke yesterday to a student audience about his most recent space adventure.

During the mission, which took place in February, the astronaut did not actually dock with Mir, but came within 10 miles of the station. "We were in preparation for an actual docking planned for June,\" Wetherbee said. "The reason we got Wetherbee, a 1974 graduate of Notre Dame."

The primary purpose of the lecture was to address the question of human space exploration versus exploration by robotics.

Can we prepare for the unexpected?

You never think it will happen. Many of us go through our sheltered little lives thinking the biggest disasters happen to but is almost always elsewhere.

One week ago it happened to the people in Oklahoma City, I heard about it at lunch from a friend who began to cry at noon and had already turned on a TV. It wasn’t until late afternoon that I saw it for myself.

For the people of Oklahoma City, it has “hit home,” and the same television just as we watched the World Trade Center, Hurricane Andrew, the California fires, the Challenger, and Padre Island. Aside from those who experienced any of these events first-hand, we sit in the family room watching in silence as technology brought these disasters into our homes.

We prepare for it, we expect anything with such magnitude to come so close to touching our lives. Then, on a warm spring morning or a cool October evening something happens or it ceased to stop time. Nothing else matters for the moment. Class? I’ll get the notes. Homework? I’ll stay up late. Studies? Who cares? The evening hours are too short to do anything. Dinner? I’m not hungry. Well, it didn’t last that long.

Once the initial shock leaves, once the cleaning up and the coping begins, time jumps back. That was last week already? You mean, already? That’s when we again start to think “It won’t happen to me.”

But not this time, not for me, at least. I’m as surprised as everyone else. I was waiting for the unexpected to happen. I’ll be expecting it, and I’ll still be surprised. But somehow I know I won’t be ready.

**INSIDE COLUMN**

**Unabomber strikes again; blast kills lobbyist**

The Unabomber may have struck again, this time killing a timber industry executive who helped remove the spotted owl from the endangered species list.

A heavy box-sized package, meticulously wrapped, arrived by mail Monday at the California Forestry Association office. The package exploded when association president Gilbert Murray tried to open it, blowing out the windows and doors and scattering glass and ceiling tiles on the floor. Murray, 47, was killed in the reception area. Five others in the one-story brick building were not hurt.

“Everything strongly suggests the Unabomber,” FBI Special Agent Richard Ross said Monday night after the crafty Unabomber task force took over the case. Ed Glauser, a spokesman for the federal Bureau of Alcohol, Tobacco and Firearms, said there were no new developments in the case.

Before Monday, the Unabomber was believed to have carried out 15 bombings over 17 years. No one in U.S. history has set off as many bombs over as long a period of time. Murray would be the Unabomber’s third fatalistic.

Twenty-three people have been injured in the blasts. FBI investigators say the Unabomber, so called because his early targets were connected to universities and airlines, appears to be targeting people involved with 300 of his bomb parts were carved out of wood, and 300 of his bomb parts have been carved in a bomb. The forensic association lobbyists on behalf of wind projects, environmental and timber owners. In 1993, it filed a petition seeking to remove the northern spotted owl from the federal endangered species list. The package was flown to Murray’s office and then was addressed to Murray; authorities wouldn’t say to whom it was sent.

The bomb was an extremely cleanly wrapped package, almost flawlessly wrapped. It blew out the windows and glass in the lobby, said Ed Glauser, a spokesman for the U.S. Postal Service.

No warning was sent and no one claimed responsibility, said Sacramento police spokesman Michael Heenan. Police Chief Arturo Venegas said there was no indication the bombing was connected to last week’s blast at the Oklahoma City federal building.

**President Clinton drops down roots in Iowa**

President Clinton, hoping to ward off the 1996 re-election threat for the Democrats in this key campaign state, staged a national rural conference today and vowed to protect small farms from zealous budget-cutters. “I don’t believe we ought to destroy the farm economy if we can help to keep the family farm,” Clinton said, surrounded by farmers, academics, business leaders and residents of rural America. Convening the gathering at Iowa State University, Clinton also called for continued funding of agriculture research programs and urged conference participants to consider the broader problems of rural America, even off the farm, and to “reward the good values that reside there.” The event was designed for success stories outside America’s big cities, with Clinton outlining the principles his administration will follow in crafting the 1996 five-year farm plan. But the most important item for the trip was politics. Iowa holds the nation’s first test of strength in presidential primaries and caucuses next year, and Clinton’s trip was one of a series he will make.

**Australia to host Ethnic conference**

SYDNEY, Australia.

Sydney, Australia. German skinheads attack Turkish and Vietnamese immigrants. Political, racial and religious strife flare around the world in 1995, dominated with AIDS and the problem of Tolerance. In this climate, the United Nations holds the first ever Global Cultural Diversity Conference, a $5.6 billion event mostly subsidized by federal and state governments. The conference opens Wednesday in Sydney. Dominating the week is the question: How can humans get along better? Conference organizers say there will be no final manifesto, no list of solutions, no recommendations. What will be discussed? Among the issues to be examined will be how the media’s impact on tolerance, the welfare and health care in multiculti populations, language barriers and health care in multiethnic groups. Australia, where 200 ethnic groups comprise a population of 17.3 million, stands as a model of experience. "Ours is surely the most multicultural society in the world," said Prime Minister Paul Keating, who opens the conference.

**Dow reinstated as defendant**

BIRMINGHAM, Ala.

A federal judge reinstated Dow Chemical as a defendant in thousands of breast implant lawsuits Tuesday, raising the possibility of new negotiations in a landmark product liability settlement. Attention will now focus on how the ruling by U.S. District Judge Sam Pointer could force the multi-billion dollar company to pay up to $800 million more than the $1 billion initial settlement. He also called for continued funding of agriculture research programs and urged conference participants to consider the broader problems of rural America, even off the farm, and to “reward the good values that reside there.”

Women encouraged to pursue mathematics

By PEGGY LENCZEWSKI
Saint Mary's News Editor

Many female students have assumed that they were simply not good at mathematics, and left numbers to those who were - namely, male students. But it has been shown in numerous reports on gender and mathematics that if a girl does succeed in mathematics, it is because she has worked hard. If she fails, it is because she has no natural inclination.

There is also statistical evidence that in fifth or sixth grade, girls' self-esteem drops dramatically, and they become less assertive in the classroom environment. The boys, who demand more attention, receive it from their teachers.

However, as a women's college, Saint Mary's offers women an opportunity to excel in what is traditionally considered a man's field - mathematics.

Sr. Miriam Cooney, professor of mathematics, says that classroom attention is often the measure of worth; without attention, there is little encouragement to succeed.

The result of these patterns of behavior is that women are often not encouraged to pursue mathematics, show little interest in it, and are content to remain "mathematically challenged," she explained.

According to Cooney, "It's been shown in several studies that in the middle grades, girls lose their voice. Teachers spend two-thirds of their time paying attention to boys.

Girls are given the short end of the stick." Cooney explained that there are four internal motivational beliefs: confidence, usefulness, sex-role congruency, and attribution. After seventh grade, math becomes more problem-solving oriented and less dependent upon memorization. Girls have more trouble with problem-solving than boys at this stage, and because teachers pay less attention to them, girls quickly lose confidence in their ability to do math.

Girls are also unaware of the importance of mathematics. Cooney said, "teachers take a lot of time to convince boys of the importance of mathematics, to show them its importance. Teachers do not realize it is important. Since it is not useful, they are not eager to learn it.

One Saint Mary's student enrolls in a math class, which when asked to remain anonymous, claimed she did not grasp the importance of probability and statistics. "I just do not see why this is as important as simple algebra or consumer math. I am never going to use probability in real life." A male in this situation would likely accept its importance in the correct style, and learn it accordingly.

Cooney explained that there are definitely a male-dominated field, and very few women are held up as role models for women studying mathematics. Women are seldom encouraged in the mathematics field, Cooney said. "Prior to World War II, 14% of all doctorates in math were awarded to women, and you never hear of these women and their work.

According to Cooney, "Women are often not given credit for being mathematically proficient. If a woman does succeed, it is because of hard work, not natural talent, while if a male succeeds it is because he is talented. If he fails, he did not work hard enough.

"It is a mathematical double standard," she said.

Women and men learn differently. Men learn competitively, by pushing each other with their internal desire to SC, or to be the best. Women flourish in a cooperative environment. In a male-dominated field such as math, classes are taught in a way in which men can do well, while women are forced to act in an environment which is not conducive to their success. As a result of all these factors, very few women go into mathematics. They are not given an equal opportunity to succeed, according to Cooney.

Cooney explained that there are four internal motivational beliefs: confidence, usefulness, sex-role congruency, and attribution.

According to Cooney, "Women do not have to struggle against sex roles. They do not have to work hard enough. They do not have to think a certain way, it's hard to change," Cooney said.

This is a genuine threat to the status quo, according to Cooney, to women who continued: "But women don't want to take over, we just want to be equal.

Professor Mary Capuzzi, who teaches women's studies classes at Saint Mary's, said that "there are good people in here, and the training and experience of professors is a issue regardless of the student make-up in a classroom. There is a very good scholarship at Saint Mary's to think differently about women's capabilities, and in all areas.

Saint Mary's math classes, while open to students from Notre Dame - male and female, are usually all women. In this atmosphere, according to Saint Mary's senior Beth Go, "it seems as if women are more willing to participate in class, even if they may be wrong." There are co-sex classes that encourage female participation which is imperative to success learning.

According to Cooney, "Saint Mary's pays very close attention to promoting math students. All incoming freshman are placed at the appropriate level in order to encourage their growth in mathematics. By carefully going through high school records and placing competent students in the right math class, such as calculus, we open a door for science and math."

Saint Mary's also has many women on the math faculty who provide role models for women in math classes. "Very often the university will have several very competent and respected female instructors, but you just never hear about them. By having a large female faculty, there are role models teaching the classes," Cooney said.

Promising math majors are also examined very closely so that they do receive adequate encouragement. Cooney states that "When you're been conditioned to think you're not good at something, it takes a world of encouragement to open up.

Go hopes to attend Oregon State University next fall to study algebra and topology, and to work hard. "I'd like to help students enjoy math. A lot of people are turned off by math, male and female, and I hope that if you enjoy math you'll do good at it," she said.

By offering women an environment that supports women in mathematics, Saint Mary's encourages students to excel in a field in which there is little encouragement. As a result, women such as Beth Go can excel in a specific and unconventional field, and can, in turn help others.

Traffic transmitters which will be placed in the body to monitor vital signs and alert doctors and/or hospitals in the case of medical emergency.

Wetherbee also cited the need that without NASA's lead in technological improvements, these advances probably would evolve eventually. "But they will come faster if we keep humans in space," he added.

Another benefit of human space exploration that Wetherbee cited is its effect on young Americans and their education. "Kids are enticed to stay in school and are excited about science," Wetherbee said.

Wetherbee also sees many political advantages of human involvement in studying space, as nations can pursue a common goal through space exploration. He found the cooperation between the American and Russian space programs in his last mission very promising.

"Some people were afraid of involvement with the Russians, but working with them was far better than working without them or against them," Wetherbee stated.

According to Wetherbee, many businesses in Houston are following NASA's lead and expanding their markets to include international consumers. Thus NASA has provided important examples of successful international relations.

Wetherbee also addressed the competitive aspect of space exploration. He noted that the Japanese will go into space "with or without us." If America stops sending humans into space, Wetherbee believes we will become a second-rate nation, as Japan will be far more powerful technologically.

"Human space exploration helps make the country survive. It will improve technology and medicine, it will make the economy and the standard of living better, and students will study more. It will make the world a better place for future generations," he said.

Wetherbee studied aerospace engineering at Notre Dame. After graduating in 1974, he joined the Navy, and then went on to the Naval test-pilot school in 1981. In 1984, he became an astronaut candidate, and was selected in 1985.

Lecture

continued from page 1

the mission was to insure that the procedures were going to be acceptable (for the June mission.) We worked out some of the bugs and got the two agencies talking," stated Wetherbee.

The mission, he explained, was not without its problems. A shuttle maneuvering jet began to leak fuel and was rendered inoperative. Although the remaining jets and fuel were enough to ensure the shuttle's safety, the Russians were concerned that the leaking fuel could damage the more sensitive parts of the station during a close rendezvous.

Eventually, all parties involved decided it was an acceptable risk, and the rendezvous went as planned. Wetherbee said that the mission paved the way for a successful docking in June, and that the only question remaining now is "whether or not the docking equipment will work properly."

In addition to the meeting with Mr. the shuttle also carried aloft 23 different scientific and medical experiments, Wetherbee said. These included "Charlote," a new robot capable of performing different tasks in zero gravity. The astronauts also launched and retrieved a satellite and performed several spacewalks.

The spacewalks were meant to test methods and devices to be used in the construction of space-station Alpha, the permanent space station that will be constructed beginning in 1997.

The mission was also notable as Wetherbee's crew included Lieut. Col. Eileen Collins, the first woman to pilot a NASA space shuttle, and Col. Vladimir Titov of the Russian Air Force, the second Russian to fly on a shuttle. Wetherbee praised Titov, calling him "a professional cosmmonaut as well as a good guy."

This mission was an important one in terms of international cooperation, he stated. The Americans got to visit Russian space facilities and learned a lot about their space hardware. The mission helped prepare for future U.S.-Russian cooperation in space, including not just the Mir-space shuttle docking but also space station Alpha. The station will be a product of international cooperation, especially between Russia and the United States.

"A joint program" in space, Wetherbee said, "will benefit both of us."

This was Wetherbee's third trip into space, and his second command. In 1990, his first mission, he carried into space with him the University's 1925 Tau Beta Pi laureate medal. The medal had been awarded to Notre Dame professor Albert Zahm, who pioneered early theories of manned flight.

The first Notre Dame graduate in space, Wetherbee has participated in several landmark missions. The most recent of these missions was in February when, under his leadership, the NASA space shuttle Discovery flew within 10 meters of the Russian Mir space shuttle, bringing the two largest space vehicles in lower space orbit closer than ever.
Chivalric attitudes have allowed nations to add rules to international law that govern war, according to Professor Robert Rodes of the Notre Dame Law School. He described this body of law yesterday in a lecture sponsored by the Kroc Institute for International Peace Studies. "If you see an enemy soldier taking a shower, you don't shoot him," Rodes said. "There are no international cops." The authority of war codes is thus strictly moral, he said.

In the past year, international law has come under attack from members of the Critical Legal Studies movement. This group argues that treaties such as the Geneva and Hague Codes actually promote war by designating some war acts as legal.

Rodes disagreed, however. "These authors overlook the didactic role of law: if it didn't have moral force behind it, people wouldn't look to it for justification," he said.

By outlawing such war atrocities as civilian bombings, rape, and civilian killings, like those of the My Lai massacre, the makers of international law "make sure the unspeakable and unthinkable are spoken and thought," according to Rodes.

While the Critical Legal Studies movement contends that laws only reinforce the hegemony of the ruling class and do not embody a transcendent moral order, Rodes called law "a reflection of practice in light of moral principles." Laws that embody a community's moral principles help members of the community make morally informed decisions quickly, according to Rodes.

Besides, he said, war is not fought only to promote the interests of a nation or a class but rather "for aims like freedom, religion, God, country, Notre Dame." Rodes predicted that warfare will become more clandestine after the end of the Cold War and Desert Storm. International law will be redefined to give a different scope to the United Nations, he said.

Professor Rodes has been at Notre Dame since 1956. He is a faculty fellow and the author of several books.
Bombing continued from page 1

Though Clinton's efforts to prevent terrorist acts from occurring in the United States may serve as a blockade to international groups, the effectiveness of these preventive measures against domestic terrorists may not be as strong. Johansen said that Clinton's aim at better prevention measures "will be helpful," but it is not possible to have "a foolproof security system."

Mainwaring says that Clinton's push for stricter security laws may result in "a slight increase in the efficiency" of the government's preventive efforts. However, Mainwaring says, "The bottom line is - it's pretty difficult to prevent," especially when terrorist acts are committed by "well-organized and determined groups."

Citing such organizations linked to the bombing, Davis sees the bombing as "a sign that we should take the threat from extremist groups seriously."

in comparison to countries in the Mideast and parts of Europe, it can still be affected by this violence. Professor of Government and member of the Krue Institute for International Peace Studies Robert Johansen agrees. Speaking in reference to the blast of the bomb estimated to have weighed close to five thousand pounds, Johansen says that, as Americans, "we are all vulnerable" to terrorism and "acts of great destructiveness."

Realizing America's vulnerability to terrorism, President Clinton recently stated his encouragement of anti-terrorism legislation which would allow law enforcement agencies "greater freedom to infiltrate foreign and domestic terrorist groups," according to an article in Monday's Chicago Tribune.

TV recognizes bomb tragedy

Soap operas review plots related to killing
By LYNN ELBER

LOS ANGELES "All My Children" aired a disclaimer and "Melrose Place" is reviewing its season finale out of concern that their bomb-related storylines cut too close to home in the wake of the Oklahoma tragedy.

While cliffhangers and extravagant plot twists are common during the May ratings sweeps, used by local stations to home in the wake of the bombing, there is some amount of violence it includes, which gives you a red-faced, which gives you a

 example of Fox Broadcasting's "Melrose Place." Both were written before the trading of the 'Melrose Place' season finale because of a single coincidence with those real-life events," Fox and series producer Spelling Television said Tuesday. "We are currently discussing the best way to handle this one aspect of the May 22 episode and will make that decision over the next week," the statement said. A Fox spokesman said the network would not detail the options under review. Red-shooting the episode seems unlikely, since filming is over for the year and the actors have scattered. On "All My Children," the decision was made to air a disclaimer Monday and before each episode dealing with the wedding bomb. The two-hour May 22 episode of Fox Broadcasting's "Melrose Place" reportedly includes a bomb at the apartment complex that is home to its main characters. "The attack by a vengeful Kimberly (Marcia Cross) was planned as a series cliffhanger that leaves uncertain who planned as a series cliffhanger. It's likely the Serbs will be less concerned by the bombing than the airing of the United Nations bomb, located outside the building on the north side, the same side to which the offices on Wednesday, April 25, 1995 The Observer

Federal building security
An explosion at the Alfred Murrah Federal Building in Oklahoma City, Oklahoma occurred Wednesday, causing extensive damage and casualties. The explosion may have been caused by a 1,000- to 1,200-pound bomb, located outside the building on the north side, the same side to which the offices

the blast. The one who endures wins.

SARAJEVO Gripped by a critical fuel shortage, the United Nations signaled Tuesday that it may give in to Serb demands to ban civilian use of the front-line Sarajevo airport.

It entails a day ahead of Wednesday's scheduled airport talks expressed little hope they could avoid further restricting use of Sarajevo's frontline to the outside world.

It's likely the Serbs will be less concerned by the bombing than the airing of the United Nations bomb, located outside the building on the north side, the same side to which the offices

repealed he would, arguing that the Serbs to dictate who may fly.

Karadzic, while claiming he was committed to peace, conceded. "We are making efforts to make war stop as soon as possible and that it stops without a winner or loser," Karadzic said, added: "We think in our duty to defend ourselves.

"Everything else would not please God and would not be in keeping with our Orthodox tradition." he said. "Our people endure and the one who endures wins." SARAJEVO

U.N. officials in Bosnia on Monday expressed concern that the tribunal's move could lead to further retaliation against peacekeepers and tightened restrictions on aid deliveries.

Following several successful offensives by government forces in recent weeks, Serbs have increasingly squelched Sarajevo. Seven people were wounded in the city Tuesday, including five bus passengers targeted by snipers. One person was wounded by small-arms fire on Serb-held territory near the city, hospital and U.N. officials said.

Serb refusal to give security guarantees to planes carrying civilians has caused suspension of aid flights to the besieged capital.

Serbs have long been angered that select Bosnian passport holders, including government leaders leaving for talks abroad, are allowed on U.N. flights.

The 1992 airport agreement, under which the Serbs gave the United Nations control of the airport, lists three categories of flights: humanitarian aid and U.N. supplies; United Nations or European Union flights with international guarantees for all civilians; and special flights for in Sarajevo, lists three categories of flights: humanitarian aid and U.N. supplies; United Nations or European Union flights with international guarantees for all civilians; and special flights for who endures wins.

A CELEBRATION OF SPRING
Navy investigation reveals harassment

Instructors and others found guilty of charges

By ERNEST SANDER

SAN DIEGO

A seven-month investigation, four instructors at the Naval Training Center have been convicted of sexually harassing female students, while others were found guilty of lesser charges, the Navy said Tuesday.

The announcement brings to a close an examination into claims by 16 female cadets who said they were harassed during training in internal communications at the center in 1993 and 1994.

The harassment reopened wounds created by the 1991 Tailhook convention, during which drunken aviators groped and assaulted women at a Las Vegas hotel.

Since then, the Navy has added sexual harassment hot lines and interaction training programs in an effort to make the service more sensitive to women and gender equality.

"There is always going to be 5 or 10 percent of the population that just doesn't get it," center spokesman Lt. Pat Denison said, "but the word is getting out that if you do it (sexually harass someone), you are going to have to pay the consequences." Of the 11 people originally named in the center investigation, only one, Joel Hernandez, was convicted in a court-marshall. A punitive letter will be put in his file, he will be fined $1,000 and, most significantly, he now has a federal criminal conviction on his record.

Nine others had administrative, non-court hearings and received punishments ranging from pay dockings to counseling and punitive letters. Charges were dropped against one person.

All four instructors found guilty of sexual harassment have between six and 20 years in the service. None are still teaching at the school or anywhere else in the Navy, Denison said.

In addition to sexual harassment, charges included indecent language, indecent assault, fraternization, maltreatment and dereliction of duty. The latter charges were for not pursuing abuse complaints.

The Navy has declined to discuss the nature of the harassment at the center, but most of it is believed to be verbal.

The investigation began in early September when a woman mentioned to a senior chief petty officer that she and another student had been harassed.

It was complicated by the fact that many of the 16 women had moved to other countries and several had left the Navy.

The center, on the federal government's base closure list, is slated to cease operation in mid-1997.

Dissident taken from home

Plainclothes police took a Chinese dissident from his home in the middle of the night last week, and no word has come since of his whereabouts.

Shao Jiang, who was a student leader of the 1989 Tiananmen Square democracy movement, was awakened Friday and taken to a police station in Canton, capital of south China's Guangdong province, the New York-based Human Rights group said.

Shao's girlfriend, with whom he was staying, also was detained. Police told them they were detained because they did not have cards authorizing them to live in Canton. However, the girlfriend was released the next day. But police said there were "other problems" relating to Shao, and there has been no further word on him.

"What we are worried about is that nobody is admitting that he's been arrested," said dissident Wang Dan. He and two other Beijing dissidents met Tuesday with the Beijing Public Security Bureau to appeal for information about Shao.

Dissidents in Canton and Shao's parents, who live in the northern city of Tianjin, have asked Canton police and other authorities for information, but the response from all offices has been that "there's no such person here," the human rights group said.

Shao, a former mathematics student at Beijing University, is a longtime friend of Wang, who was No. 1 on the government's most-wanted of student leaders of the 1989 movement. Like Wang, Shao was arrested after the military crackdown that ended the protests. Although he was never charged or sentenced, Shao was not released until 1991, when he went to Canton seeking work.

"Even though he was imprisoned, unemployed and endured other persecutions and hardships, he never gave up his ideal of improving human rights and democracy," the rights group said.

In March, he joined Wang and other activities in petitioning the national legislature for guarantees of basic human rights.
The other day, as I was sitting in my study, carrel attempting to get some work done, I happened to look out the window, and I was immediately captivated. It was dark gray and the wind was blowing hard. This juxtaposition of extremes had to be one of the most beautiful things I ever witnessed. The trees appeared as though they were about to be torn down. I turned my gay into dark. I was torn out of the carrel and spent the day. I felt a sense of duty to do so, I considered causing sorrow. I tried to comprehend the grief that this poor man was going through. I found my sorrow combined with fear. I longed to put myself in the place of those individuals who, despite surviving the blast, remained trapped under all the residue. I did not doubt that the rescue teams did their best, but even those who eventually were found had no doubt suffered a psychological trauma that will probably remain with them forever. And again, many victims of the explosion were children. It must have been even worse for them. As I imagined how awful it would be to be trapped in such a way, my fears were not quelled when my mother informed me that the building I plan to work in next year was temporarily locked up for reasons relating to the bombing. These are not pleasant thoughts.

Of course, in any tragedy there is a ray of sunlight to be found, and in this case I think it is the way in which people have united to help and support one another. I hope that people will try to put themselves in the shoes of those who have lost loved ones. They have been through unobscured. My first reaction was the light. I wonder if it is not the same type of phenomenon that causes me such disturbance as I write today’s column. Although I felt that duty to do so, I did not really want to write about Oklahoma City. The whole experience was overwhelming for me, and my difficulties dealing with it, I think, are more complex than the feelings that many others are experiencing during this time of crisis. Let me explain.

My first reaction was the same as that of most people: sorrow. I tried to comprehend how the residents of that city must feel - especially those whose homes were reduced to ash, or those whose children may not have even considered the building to the time of the explosion - and I knew that nothing I have ever experienced could compare to what those people were subjected to. Many who were in the building were children, and I cannot imagine how horrible it would be for a parent to suddenly find that one of their children is dead or alive. One man in particular evoked my sympathy. Both his parents and his children were killed in the bombing. I know that losing my parents alone would be more than I could deal with. Not being a parent myself, I cannot begin to comprehend the grief this poor man is going through.

Viewpoint Editor

The blast. Why obscure this side of the issue with proposals for further killing? I have heard some of these torturous recommendations too. What bothers me most about this facet of the tragedy is that it almost seems that those of us who do not wish upon the responsible persons cannot have much sorrow for the victims of the tragedy. This is completely wrong. First of all, it is our compassion for others, not our own reforms which allows us to seriously lament for the victims and their families and yet avoid hating those responsible for the bombing so intensely that we rally for their death. Second, while it seems backwards to some that all people do not adopt their violent, revengeful tendencies, what seems back wards to me is that we should take a crisis of such degree and make it even uglier by adding the advocacy of further violence. The unity I have observed will help us to make it through the tragedy and, for those who know the victims, to grieve in a healthy manner and eventually to go on, always remembering the contributions made by those killed in the blast.
In Moo, her newest novel to hit the bestseller lists, author Jane Smiley creates a fascinating array of eccentric characters displayed against the backdrop of a fictional state university. Using the image of universities as their own little worlds, Smiley uses the college cast to portray almost every facet of American society.

With its midwestern locale, strong agricultural training tradition, and classrooms filled with "twenty-one blue boots, five red, in row of five, unraveled by a single gle brunette," Moo U might appear as the last place one might find a bit of diversity. However, this is the wrong assumption. Right from the first page Smiley sockers her readers with characters of a character exhibiting a vast array of interests and placed in a wide variety of situations. Using short three- to four-page chapters, Smiley manages to introduce over twenty major characters and plots early. The multiple plots become a clever patchwork, the detailed events illustrating the interconnection of the society. Each character revolves on his or her (or even its) own axis, but out of the individuals' problems and plots falls that of another.

The novel opens with an introduction to Old Meats, the formerly hallowed hall of agriculture which lies at the exact center of campus. Within this desert campus, buildings residing the agreeable Earl Butz, the founder of a research project by Dr. Bo Jones. Obsessed with the study of the hog, Butz hires the pig Butz to attempt to discover what will happen to Butz if he is allowed to eat at will for all his natural life span. Butz, given free reign to satiate his affinity to consume, cooperates. Jones's project becomes the first of several faculty research projects introduced throughout the book. The many plots begin to focus around this plethora of research which ultimately needed to keep the university intact. The struggles and relationships resulting from these attempts to create new inventions and establish new theories are all played out in entertaining and intricate detail.

Emerging from this tangle is the complicated issue of corporation and political involvement. As the state and corporation push more and more of the allessential funding of Moo U and ties between the university and outside world increase, Professor Gift's idea that it is the strive for consumption of goods which lies at the root of human's desires begins to seem fairly reasonable. But is there a limit to what one should do in this search to fulfill desire? When Professor Gift becomes involved in a corporate proposal to mine a Costa Rican gold deposit which lies beneath one of the last remaining economic mainstays, he begins to see the tinge which upset the careful appearance of calm at Moo U. Suddenly passions explode, voices rise above polite humming, and pigs run out of buildings. As funding slips out of reach, Moo U must make a crucial decision.

Despite the stand on academic freedom. Like Earl Butz, Moo U is faced with society's newest challenge: Get big or get out.

With poignant humor and the clever weaving of several plots and characters, Smiley produces a wonder of a book, presenting a simply a good read. But the hidden insights and messages she subtly introduces raises the novel beyond being just simple enjoyment.

In the "old days," describes one of Smiley's characters, "merely a college, a group of classmates." It made no claims to universality. But the idea of universality created an institution "shaming formal pretensions to everyone, and charging so much that prospective students tended to leave with a good education and wit." Smiley examines the present day conceptions and realizations of higher education, illustrating its problems and assets in a way appealing especially to readers having passed through its doors.

Going one step further, Smiley turns Moo U. and its eccentric community into a mirror of the modern world. Moo U.'s provest comments, "It had become, more than anything, a vast network of interlocking wishes, some of them modest some of them impossible, many of them conflicting, many of them complementing each other."

The book is a strange mixture of realistic and fantastical elements. The setting is painstakingly accurate and the people are realistic but the events are a blend of the mundane and the incredible. A house blown away by a storm, a gruesome murder, and a dead man sitting up at his own wake are interspersed with Christmas pageants and oil spills. Whether or not "The Shipping News" deserves a Pulitzer Prize is a matter for debate. It is a good book but not quite that good, an interesting story but hardly compelling. It has in its moments but it doesn't draw you in and make you care about the characters. Though not a chore to read, it is certainly not a joy, although it improves upon reflection. If you spend any time thinking about the book, you will find things you overlooked while reading it. There is a lot contained within the pages, it just takes a while to find it.
Notre Dame, Dame and the Irish today with twinnip

By Neil Zinder
Syracuse Contributor

It's not a Conference game. In the MCC standings it counts for nothing. But Notre Dame's 3:30 doubleheader at DePaul this afternoon is one of those. After all, DePaul is a rival. And rivals are everything.

DePaul is always one of our biggest rivals," coach Liz Miller said. "Even at the start of the softball program it's been a good rivalry. I expect them to be very good." Miller emphasized the word very.

The South Bend World thinking that starting pitchers Torri Kobata and Joy Battersby are feeling healthy. Kobata has been batting a hip flex that's harder to swing than the weight. Miller always has to deal with the question of whether or not the Irish will be looking for improvement on the basepaths. Miller has said that the Irish have suffered partially on the basepaths.＆

Offensively, Notre Dame will need some solid baserunning. The Irish have suffered partially on the basepaths. Miller has said that the Irish have suffered partially on the basepaths.＆

Our sports assigned every business day by 8 a.m. to the Notre Dame sports director, 234 Lafontaine Hall, South Bend, IN 46655, 219-773-2011. Deadline for election deadlines is 8 p.m. All assignments should be prepared. The charge is 2 cents per character, including all spaces.

ATTENTION GRADUATING SENIORS (or anyone interested in finding out what it's like to be a Peabody or any other graduate of Notre Dame)

(SUBMITTED BY THE NOTRE DAME FOOTBALL STAFF)

Notre Dame alumnae have been hitting the books hard. "I don't think I'm hitting the ball any different," Mark said. "I probably just got a little more confident. I've been having more solid hits and bloopers."

In the Irish's box, the Irish will be looking for improvement from Megan Robertin, Megan Perkins, and Kara McMahon who have struggled as of late. The Irish are trying to bring in a Freshman who can be a solid reliever. The Irish have not had the advantage of a Freshman who can fill in. The Irish have not had the advantage of a Freshman who can fill in.

Regular season returns with higher prices

Replacement umps and lots of hits expected

By BEN WALKER
Associated Press

Star players are hobbling, and hitters are ahead of pitchers. The real umpires are missing, for now, and the schedules are messy.

No, baseball isn’t exactly getting off to a clean start in 1995.

By the time John Burkett throws the first pitch to open the season tonight, it will have been 257 days since the last game that counted, the biggest gap in major league history.

So what will the crowd at Joe Robbie Stadium for the game between Los Angeles and Florida, the audience watching on ESPN this evening, and the fans that will follow later this week see when the game returns?

A lot of hitting, probably. A spring training shortened in half to three weeks by the strike has caused problems for pitchers, and the overall exhibition ERA is over 5.00.

Steve Avery, Mike Mussina and Bret Saberhagen were among those hit hard in their tuneup starts for the regular season. Bob Welch and Ted Higuera were released in the last couple of days, and 11-year veteran Joe Hesketh retired Monday night after giving three runs in two-thirds of an inning for the New York Yankees.

“I lost my rear end for two weeks to see how it would go,” Hesketh said. “My arm didn’t come around the way it was supposed to.”

Wrigley Field will soon see action, as Tuesday marked the start of the long-awaited Major League baseball season.

Hesketh was not the only player having trouble.

Roger Clemens, Juan Gonzalez and Alan Trammell are among the players already on thedisabled list. Many more have been hobbling by pulled hamstring and other nagging problems.

“Every baseball player gets a strain, except maybe Cal Ripken,” Gregg Jeffries said.

Ripken begins the year having played in 2009 consecutive games. He’s on target to break Lou Gehrig’s mark of 2,310 on Sept. 6 in Baltimore. Even in a season chopped to 144 games, cutting out almost any chance of the record chases that made 1994 so special, Ripken’s pursuit will draw considerable attention throughout the summer.

This spring, meanwhile, might see a lot of players challenging umpires.

The regular umpires have been locked out by owners, and plan to picket, starting tonight in Miami. Replacement crews, made up from former major and minor league umpires, will take their place.

Ticket prices fluctuate as seven teams raise prices

By RONALD BLUM
Associated Press

NEW YORK

Say it ain’t so, Yankees. C’mon Rockies. What’s up Orioles?

Seven teams raised the cost of an average ticket this year, excluding the discounts many teams are offering for a few weeks to lure back fans after the 232-day strike.

The average price of a ticket went up 1.8 percent to $10.65 this year, an increase less than the rate of inflation and the lowest jump this decade.

The New York Yankees have the highest average ticket price at $15.01, a jump of 3.9 percent from 1994, according to figures released Monday by Team Marketing Report. The Cincinnati Reds, who didn’t change prices, have the lowest average at $7.95.

The Colorado Rockies, who moved from Mile High Stadium to Coors Field, had the largest increase, a 34.2 percent rise to $10.61 from $7.90. The only other double-digit increase was the Baltimore Orioles, whose average rose 17.7 percent to $13.14 from $11.17.

Inflation was 2.7 percent in 1994, according to the Consumer Price Index. Only seven teams increased their average ticket price this year.

The Pan-African Culture Center of The University of Notre Dame Presents:

An African Irish American Celebration

A multicultural celebration that you must experience to believe. With...

• Trinity, America’s number one school of Irish dance • Award winning Irish musicians out of Chicago • Seamaín, Notre Dame’s very own Irish band • Djo-Gbe, a transcultural ancient African dance, with internationally recognized Master African drummers and dancers • The African American Unity Ensemble, affiliated with the American Conservatory of Music, Chicago

Vendors of ethnic clothing, books, jewelry, and imports will be selling their wares in outer lobby of the Hesburgh Library all day Thursday

African and Irish Music and Dance Together Again 7:00 PM, April 27th Washington Hall

Tickets: Students and Senior Citizen $3.00 advance, $5.00 at the door. General Public $8.00 advance, $10.00 at the door. Tickets available through the Notre Dame Box Office, (219) 631-8128. Reception to follow performance. Free workshops on the Quad of African and Irish Dance as part of An Tostal, 11:00 AM -12:00 PM, Thursday.

Strive to enter into dialogue and make friends with someone else from a culture with which you have had no previous contact.
Spring continued from page 20

man Jarvis Edison on the No. 1 defense. Besides Moore's absence, all other Irish casualties were temporary. Center Dusty Ziegler went down with an ankle sprain Saturday, which will keep him out of Saturday's game. Sophomore Kinnon Tatum missed Tuesday's scrimmage, but will play this weekend.

Luckily for Notre Dame, though, no other players went down, but it wasn't because they weren't trying. "We were much more physical than I thought we'd be," Holtz commented. "But we've had very few injuries, which is good. We have to be injury-free."

Without this burden, the Irish have enjoyed the luxury of putting the first team offense and defense against one another. While the defense kept the Ron Powlus-run offense from registering a first down on Saturday, it fell short of that feat yesterday. The No. 1 offense had back-to-back 65-yard scoring drives, which included pass completions from Powlus to tight ends Leon Wallace and Pete Chryplewicz. And a couple to a guy named Mayes.

"We hadn't been tenacious on offense this spring," Holtz said. "But today was the first time we started being a competitive offensive team."

It could turn from competitive to dominating come Saturday, however, when the first team defense and offense team up against the reserves in the Blue-Gold game.

"The number ones will play together Saturday," Holtz continued.

Belles blast Hornets in opener

troucing the Hornets, 9-1. Saint Mary's had to come to the conclusion as a team that they were going to win the last seven games of the season. The level of enthusiasm in Kalamazoo showed that that had taken place. But the Hornets stopped that goal in the second game of the double header when the Belles fell to Kalamazoo, 3-4 in the ninth inning Tuesday.

Junior Laura Richter had an impressive first game for the Belles, pitching for five of the six innings and helping her own cause, by doubling at the plate and scoring two runners in the process. Freshman Andrea Arena also came out swinging, hitting 4-4; including 2 singles, 2 doubles and 1 stolen base. Arena was 6-8 for the day. Coach Maggie Killian was pleased with her team performance in the first game.

Laura doubled in two runs in the second game of the double header. Richter, Killian and the Belles all had good days. Richter was aware that the Belles had come to play.

Saint Mary's won the first game of the double header.
continued from page 20

"Joe Haigh is the guru of Bookstore basketball," stated Travis Brown of competitor Showtime. "Anytime you need to know about a player or a team, Joe knows. He'll give you the skinny."

Of course, Haigh is not just the average fan. He can play the game a little too. In fact, he has never lost a Bookstore game, including a run through the field with last year's champion NBT.

"I was very fortunate to pick up with those guys last year - it was a great team, very talented and very disciplined," Haigh commented. "We need some of that discipline on this year's team."

Haigh is not a dominant player on the court, but he picks his moments better than anyone else. As he admits, "When you get down to the end of the tournament, I'm less athletic than anyone else. Given that, you've got to come up with something else, and for me that's simply guts."

When you see Haigh on the court, guts is not the first word that comes to mind. Beachcomber is more likely. In an era of kneebraces and mesh shorts, Haigh is a throwback, playing in loose fitting, purple-plaid shorts and sneakers that were out of style when Air Jordan was still in high school.

"I definitely favor the 'White Men Can't Jump' look," explained Haigh. "You come out on the court and people underestimate you."

With his track record and knowledge of the game, the days when Haigh was underestimated have long since vanished.

Irish

continued from page 20

13 in a complete game, with an equally solid outing from sophomore Darin Schmalz. The right-hander picked up his sixth win by going the distance, allowing just four hits and striking out seven.

"Our game plan was to go inside on their big guys, and I was able to mix in my changeup to keep them off balance," Schmalz said. "The defense played really well behind me."

In the first inning, it looked like the Irish might make short work of the Tide. Singles by Craig DeSensi Mike Amrhein and a walk to Scott Sollmann loaded the bases with no outs.

After Ryan Topham struck out Rowan Richards drew another walk to score DeSensi. But Schlesse got out of the jam by getting George Restovich to ground into a 6-4-3 double play.

Alabama responded in the third, as Joe Caruso scored on a grounder by Anthony Dolzone that was mishandled by shortstop J.J. Brock. After another single put two runners on, Schmalz got a double play of his own as Chris Motler hit into a 5-3 play to end the inning.

The next frame, the Tide struck again. With Jason Jordan at first, Rusty Loflin hit a towering blast to left.

"I thought that was the only bad pitch I threw all night," Schmalz said, who allowed no hits after Loflin's long-ball.

"But I knew if I battled back we'd get to their guy eventually."

The Irish got to Schlesse in the fifth. After Sollmann walked, Amrhein answered with a two-run shot, his sixth of the year.

"I didn't think I'd get anything to hit, so I was looking for a curveball down in my zone and I got it," Amrhein said.

An inning later, Notre Dame would put the game away. Richards led-off with a single, and Restovich reached on an error. With the infieldfound drawn in, Brock knocked a single into center to score both runners.

The Sailing Team will be taking time out from An Tostal this weekend in order to travel to the University of Wisconsin-Madison for the Coed Dingy Championships of the Midwest Collegiate Sailing Association. The regatta will involve ten teams, but only the top two finishing teams will qualify for Nationals.

“We feel pretty confident about this weekend. Our biggest competition will come from Marquette, Northwestern, and Wisconsin,” said the team commodore sophomore Brien Fox.

Fox will be sailing one of the two boats this weekend with Lauren Mack of Lyons Hall. The other boat will be occupied by Steve Kelley and team captain Bridget Murray.

Last weekend, the women of the sailing team earned a third place finish in the Women’s Conference Championships, led by skippers Murray and Fox. In addition to this weekend’s race, the team is looking forward to the Team Racing Championships which will take place during the weekend before the over the course of the year.

The team has competed in over twenty regattas. So far this season, led by Murray.

“We’ve done a pretty great job this year, and I hope that we will continue to reach our goals in the last two weeks of our season,” said Fox.

WOMEN’S LACROSSE

The Notre Dame women’s lacrosse team has some goals for its first season: win a few games, have some fun and lay a solid foundation for the future of the program.

As the season draws to a close, the 9-1-1 Irish have exceeded their early season hopes in a big way, claiming a berth in the first ever Women’s Collegiate Lacrosse League play-offs this weekend.

Saturday, the Irish will meet Vanderbilt at Ohio State. The league finals and all-star game will be Sunday in Columbus.

Notre Dame had four players earn all-league honors. Seniors Michelle McQuillan and Julie Mayglothring made first team, and sophomore Tara Pierce and junior Megan McGrath received honorable mention.

The team ended their regular season Saturday with a 7-5 win at Michigan State. The Irish had tied the Spartans 9-9 in their earlier meeting, and the hosts were determined to earn a win with aggressive, tough play.

But keyed by an equally aggressive defense, Notre Dame was able to overcome MSU. Freshman goalie Kara Wynn was especially impressive, allowing no goals in the last 15 minutes of play. Juniors Erin Breen and Carrie Englinston and freshmen Jen Ennis and Kerry Audley backed Wynn in the field.

Over Easter weekend a quartet of first-time players consisting of junior Meghan Quigley, sophomores Jen Jocz and Sara Costello and freshmen Kelly Gleason led the Irish to two wins over Miami (OH) and Purdue.

GYMNASTICS

Although the Gymnastics Team’s competitive season has ended, their dedication towards Gymnastics has not. This season, the women on the team were invited to the Women’s Nationals at Virginia Tech for the first time in the team’s history.

Kara Ratliff, Molly Ryan, Sarah Blattner, Amber Meely, Stacey Kramar, Molly Mayka, and Kelly Costello represented the team at Nationals, and were extremely satisfied with their stellar performance which earned them a sixth place finish.

Due to the performance, the team is now ranked number six in the nation.

The team’s season consisted of five meets, in which they placed second in three and third in two. Next year the team hopes to continue their success due to a high amount of young gymnasts.

The Gymnastics Team also contains a large number of male members, which were mostly new to the competition this year.

However, the team’s males have good things in store for them next year.

The team still practices daily in Angela Athletic Facility at Saint Mary’s every weekday afternoon from 4:45-6. They are always hoping for new members in both their advanced and beginner levels at anytime of the season.

New hockey coach Dave Poulin realizes his dream of returning to coach Notre Dame.

By MICHAEL DAY

Who says you can't go home again?

After a month of drama and suspense, the Notre Dame athletic department announced that former Irish captain and current NHL standout Dave Poulin will return to South Bend as the next head coach of the Irish hockey team. Poulin, a former Notre Dame star and a 12 year veteran of the National Hockey League, will fill the vacancy left by Ric Schaefer, who resigned March 24 after eight seasons as head coach of the Irish.

"Coming back to Notre Dame has been a dream of mine for some time," said Poulin. "I am grateful for the opportunity, and I look forward to seeing the program excel."

In an effort to rebuild the struggling program, Notre Dame athletic director Dick Rosenthal passed over several qualified candidates to bring back one of the best and one of the most popular players to ever lace up the skates for the Irish.

"I am proud to announce that the university is bringing back one of its most famous and most successful player as men's hockey coach," said Rosenthal. "Dave Poulin had so many alternatives, and it is a compliment to the university that he chose to come back here. He is the ideal of Notre Dame."

After graduating from Notre Dame in 1982, Poulin played one season with the Bogle hockey club in Sweden before signing with the Philadelphia Flyers in February 1983. The 5-11, 190 pound center played in his 700th NHL game on Jan. 29 and has amassed 530 points in his 12 year career.

Poulin, who still holds Notre Dame records with 13 game winning goals and eight hat tricks, is currently on the Washington Capitals active roster.

By TIM SEYMOUR

time," said Porlul. "I guess if I spent more time at the library, I couldn't be out here, but to be honest, I hate that place," laughed Haigh. "It's great to see everyone out here playing ball, and it's fun that everyone is so competitive about it. Everyone looks at interhall as just a game, but Haigh can be a senior and playing ball is in his blood. If a ball is bouncing somewhere on campus, chances are that he is in the vicinity, and when the courts are packed in late April, Haigh can be found strolling around soaking it in well into the night.

"I guess if I spent more time at the library, I couldn't be out here, but to be honest, I hate that place," laughed Haigh. "Being a senior and playing ball also, I know many of the players, so I just enjoy coming out here to watch them."

Haigh's knowledge of the campus basketball circuit has made him an important resource on the grapevine. If you want to know who C.C. is looking to pick up, ask him. Question on how the freshman on Cactus Jack's looks? Haigh will be able to tell you.

By MIKE NORBUT

Sometimes, a little excitement is good for a football team. But no excitement is better for Notre Dame.

After trudging through countless off-the-field problems last spring and dipping to a 6-5-1 record this past season, nothing would have pleased Irish coach Lou Holtz more than for his team to just hold court of his own on the game he loves, always while keeping an eye on the competition that makes the tourney what it is. The Irish overcame a huge victory in the Irish's continuing quest for national respect.

In the most recent Collegiate Baseball rankings, Notre Dame (32-13) found itself in the vicinity, and when the courts

NBT2's Haigh holds court

By TIM SEYMOUR

Stand next to Joe Haigh for ten minutes and you will meet the world. One minute he and Ron Powlus are exchanging pleasantries. The next, he and Admore White knock down some jumpshots. Commissioner Todd Leahy offers congratulations on another NBT2 victory while reffing at an adjacent court. You keep walking, and at Monk Malloy to drop in for tips on his defense. It is what the campus is all about, and Haigh will be able to tell you.

"I'm proud to announce that Dick Rosenthal, our new hockey coach, will fill the vacancy left by Ric Schaefer," said Lou Holtz. "Dave Poulin had so many alternatives, and it is a compliment to the university that he chose to come back here. He is the ideal of Notre Dame."

"There have been rules at the university and the program for a little controversy," said Poulin. "There are rules at the university and the program for a little controversy."
