Conscientious objection at ND

by Tom Hampson

This is the last of a six part series on conscientious objection by Rich Smith, Dr. John Yoder, Tom Hampson, and Dave Lamners.

The avowed purpose of this series of articles was to de-mystify the C.O. position. This is a most important goal. The C.O. is not necessarily a freak or a fanatic. He is a conscientious christian. He holds a legally recognized objection to war. He understands that the conscientious objector with civil disobedience, is completely acceptable. To be perfectly clear, the C.O. objector is just as legitimate a position as the college student who can in the past in the past led to more extreme actions for the sake of conscious, the premier of a new system of law as the draft.

Perhaps this part of the C.O. is not for every Christian to follow, however it is the responsibility of every member of the body of Christ to consider this course. The challenge of the peacemakers is not to be lightly ignored. Nor are its consequences, in WWI the penalty for conscientious objection was death, in WWII imprisonment, and at present the C.O. is required to do two years of alternative service. The difference between these penalties is the result of more and more men considering the legal option more. The government could not fail to recognize the willingness of sincere Christians to investigate the more difficult implications of the gospel and human management to solve these situations. It is an unfortunate fact that at this university to pursue this path of C.O. is also planning to how much money they will lose them. This is especially relevant for C.O., since it is a decision based on Christian teaching. Rather than questioning the position itself the C.O., club hopes rather to be a place of personal investigation and comparison through discussion. If you think you may want to follow the way of conscientious objections it certainly makes sense to talk to others both in the same position and even more important to people already committed to this idea. Realizing that eventually the final decision must come from within, it is hoped that through this preliminary dialogue everyone will be able to answer the challenge of seriously loving the gospel.

The decision to apply for a C.O. for the Notre Dame student has typically been one of isolation. (An exercise in contemplation within the confines of one's room, with little realization that there are others trying to find similar answers.) This awareness I believe could be beneficial to the student who believes his search is singular. The C.O. attempt at this discovery for Notre Dame claims itself to be a Christian commitment rather than a major portion of this familial concern should be to provide information and support for these young people. This is especially relevant for C.O., since it is a decision based on Christian teaching.

Student Union spends 30% of budget, expects profit

by Glen Corso

In a press conference last night by Denny Clark, along with the top management of the Student Union, the SLC's recommended changes to the C.O. position has only spent 30.6% of their total budget allocation. The Union, which was budgeted for an outlay of $2,420,000, spent $1,972,000. The reason for the Union's financial success was attributed to several factors, including the profits made by Student Services and Social Commission, and a new accounting system which gave tighter control over internal cash flow.

Jay Fitzsimmons, Union Comptroller, explained the goals which the Union's management set when they took over on April 1st of last year, and how they were achieved. He explained that one of the most pressing needs was to "control the flow of cash in the organization." Previously, he claimed, there was "little control over money," in the Student Union. Commissions could spend money, without telling the management where and how it was being spent, as well as the amount, he said. Under the system, commented Fitzsimmons, the budgeting and financial responsibility appeared in the black, when the new Union people took over April 1st of last year however, bills were sent for expenses which had already been incurred by the Commission, which had not been taken into account. Now however, it is possible to measure where a commission spends money, which Fitzsimmons termed as "Venture accounting combined with budgeting."

Under this system each expenditure made by a commission over $500, will be circulated to the form of an encumbrance. This way of controlling management will make it possible to predict a certain amount, the comptroller is informed and the amount entered on his books. Thereby each commission knows how much money is available for extra events activities which would be done at a certain stage, or if they have to drop certain activities because of a shortage of money. A 100 page report which explains the system thoroughly, and how and how it works has been compiled and will be passed on to the new University management team so that they won't have to "set up a whole new system, because they don't know how this one works," according to Fitzsimmons.

Dick Roderick, head of Financial Planning for the Union, explained that the budget was set forth so as to convey the idea of "package of services." According to the Union budget was presented as a whole to the Senate.

Now Roderick said, the union has "quite a bit of extra money" available for the year. A list of the concerts was presented as a whole to the Union. The Union budgeted for an outlay of $22,400 has been increased to $25,000. The Union budget has been increased to $25,000 on a group rather than a horse. The Union bought $25,000 on a group rather than a horse. Mr. Frick pointed to the Academic Commission and said, "In October we planned the Academic Commission Conference. We will have some $15,000 now though it will be around 19,000." The Union is also planning to have a $5,000 contingency fund, in cases of losses incurred in the areas of campus press or academic commission or other areas.

"We made money mainly because of the success of the concerts this year," Social Commission head Dave Veechi explained. "In fact, two of the concerts were very successful and we could be a great amount of money off of them."

Veechi also outlined upcoming events for the semester. On February 28, the Social Commission is sponsoring the Dreams in concert. This is the first effort in the smaller concerts idea, where there is a minimum budget. Veechi termed this as risky though saying "I would rather spend $25,000 on a group rather than $1,500 since I can be sure of filling the place up with the more expensive group."

The Collegiate Jazz Festival will be held this year, Veechi said. Due to the extra money the festival will be held "Even if it incurs a loss."

An agreement has been reached with the SLY and the Family Stone for the May 2 Grand Prix concert. The concert has been budgeted to break even, Veechi said, even though he expects it will make a profit. This is due to (continued on page 5)

Frick supports most Bureau changes

Tito Trevino, Ant. SU director

Frick holds the letter which was sent last week to the Student Life Council Mr. James Frick, University Vice-President for Public Relations, expressed his support for all of the SLC's recommended changes to the C.O. Placement Bureau in compliance with the SLC's recommendations as general goals. The C.O. office will be published by the deadline date. This pamphlet will include a list of organizations and the newly-formed St. Mary's Placement Bureau in compliance with the SLC's recommendation to that effect.

In order to clear up any confusion about the exact purposes of the Bureau the SLC had asked, Frick said a pamphlet explaining the complete organization and purposes of the Placement Bureau will be published by the deadline date. This pamphlet will include a list of organizations and the newly-formed St. Mary's Placement Bureau in compliance with the SLC's recommendation to that effect.

Frick said a pamphlet explaining the complete organization and purposes of the Placement Bureau will be published by the deadline date. This pamphlet will include a list of organizations and the newly-formed St. Mary's Placement Bureau in compliance with the SLC's recommendation to that effect.

Frick also indicated that the list of organizations will be sent to the SLC and the Student Body President for the purpose of selecting the organizations which will be of most use to the student body.
Aiggins Professor of Physics and a member of the National Academy of Sciences, Dr. Margenau is well known as an author and lecturer. He served as a consultant to the Atomic Energy Commission, the Air Force, the National Bureau of Standards, the Argonne National Laboratory, the Rand Corporation of California, as well as Lockheed and Avco Fmearch Laboratories. He has been a staff member of the Institute for Advanced Studies at Princeton, New Jersey, and the Radiation Laboratory of the Massachusetts Institute of Technology and has held a Guggenheim Fellowship and a Fulbright Grant.

"You look at the situation of the world. The war is still going on in Vietnam. The cold war still continues. And the fact that we have those two big things is going to affect the solutions to the world's problems," he said, "because you can't have a peaceful society with those two forces going on.

Margenau to speak on science and experience

Henry Margenau, Visiting Lecturer and Yale University professor who is a leading authority on the philosophical foundations of physics, will be the featured speaker during the Saint Mary's College Humanistic Studies series on Monday, February 26. The session, which is open to the public free of charge, will be held at 8:00 p.m. in the Monroe Hall Little Theater.

Dr. Margenau, who will speak on "The Role of Science in Human Experience," has made important contributions to physics as his work on intermolecular forces, spectroscopy, nuclear physics and electronics.

During World War II, Dr. Margenau did important work in microwave theory, particularly duplicating systems which make possible the use of a common antenna in a radar set for both transmitting and receiving operations.

Dr. Margenau has been visiting lecturer and professor at many universities throughout the United States and in Germany, Japan, and Switzerland and has received at least six honorary doctorate degrees from universities in the U.S. and Canada.

Notre Dame accepts large ALC grant for research

Notre Dame accepted awards for research and educational programs totaling $191,994 for the month of January, Dr. Frederick D. Roscoe, vice president for research and sponsored programs has announced.

The Atomic Energy Commission contributed $100,000 in support of research in nuclear sciences in the department of physics. Dr. John W. Mihelich, professor of physics, and Dr. Emerson G. Funk, associate professor of physics, have used spectroscopy methods since 1957 to study the nuclei of excited atoms. They are particularly interested in measuring the energies, describing the wave functions, and learning the spins of specific nuclei.

A sophisticated apprenticeship program in science for top undergraduates received $36,080 from the National Science Foundation (NSF). Six departments at Notre Dame will sponsor undergraduate research programs this summer, more than at any other university in the country. The programs offer top undergraduates an opportunity to pursue individual research under established scientists. Awards for research totaled $155,904, and included:

- $19,180 from the National Institutes of Health (NIH), for studies in "Cellular Aspects of the Mechanisms in AB Synthesis," to be administered by Dr. Albert A. Nordin, associate professor of microbiology.
- $12,200 from the NSF for an undergraduate research participation program in aerospace and mechanical engineering, to be administered by Dr. Kwan-Tou Yang, chairman of the department.
- $9,487 from the NSF for a postdoctoral research fellowship in biology.
- $5,944 from the NSF for a postdoctoral research fellowship in geology.
- $4,500 from the NSF for a program in medical physics.
- $4,550 from the NSF for a program in meteorological engineering and materials science, administered by Dr. Edward A. Peevit, professor of meteorological engineering and materials science.
- $3,570 from the NSF for a program in civil engineering, administered by Dr. Kenneth R. Lauze, professor of civil engineering.
- $1,000 from the NIH for a postdoctoral research fellowship in biology.

Awards in support of educational programs totaled $36,080, and included:

- $12,200 from the NSF for an undergraduate research participation program in aerospace and mechanical engineering, to be administered by Dr. Kwan-Tou Yang, chairman of the department.
- $6,600 from the NSF for a program in biology administered by Dr. Ralph E. Thorson, professor of biology.
- $4,660 from the NSF for a program in geological sciences.
- $4,550 from the NSF for a program in geology, administered by Dr. William M. Farley, associate professor of geology.
- $3,500 from the NSF for a program in meteorological engineering and materials science, administered by Dr. Edward A. Peevit, professor of meteorological engineering and materials science.
- $3,570 from the NSF for a program in civil engineering, administered by Dr. Kenneth R. Lauze, professor of civil engineering.
- $1,000 from the NIH for a postdoctoral research fellowship in biology.

In attacking such a problem, students spend the first two weeks getting acquainted with the physical layout, people and procedures. After that, they are expected to conduct interviews, draw a floor plan, perform simulations on the computer, and come up with a few workable suggestions.

Daschbach's students in past semesters have undertaken service projects for the Memorial Hospital, the Sibey Machine and Foundry Co., the South Bend Clinic, and White Farm Industries. Often, their studies have proved so interesting that a graduate student was funded to complete the project when the semester ended.
Stop false fire alarms

The Notre Dame fire department spent its usual weekend answering false alarms. On at least, for the past two or three years.

Friday night the department, which consists of the Brothers who live above the fire station and some volunteer graduate students were called to a false alarm in Walsh Hall. After spending time checking out the call they returned to the station. As soon as they returned they were called out again — this time to the area near the Grotto. Apparently some prankster saw the truck returning to the station and decided it would be cool to turn in a false alarm.

Saturday night was the same story. About midnight an alarm was turned in for the 11th floor of Grace where a party was going on. The crew arrived in time to barge in on the affair, probably much to the delight of whoever it was that was looking for a laugh. One of the fire volunteers remained on the truck while the others went up to the eleventh floor. He had to stay there, he said, because in the past they have had problems with people stealing equipment while the volunteers would leave the truck unattended to investigate an alarm. While he stood there he had to put up with the taunts and jokes of the hall residents.

Such actions are ridiculous to say the least. At the most they are dangerous. Someday they might prove less than funny if the staff is out chasing a false alarm while a real fire is taking place or if they discover that some drunken student has picked up a piece of equipment from the truck that is needed. Not insignificant is the fact that the men in the campus fire department are volunteers. They are giving their time to help protect the campus and certainly shouldn't be required to put up with all the pranks that take place.

We feel that members of the halls should begin to take a more active role in assuring that such ridiculous actions are not allowed to continue. The number of false alarms has picked up in the past few years. Three or four years ago there used to be a false alarm or two when there was some kind of "big weekend" according to officials. Now it is an acknowledged fact that the company is out almost every weekend — often more than once.

Usually a person can not turn in a false alarm without someone spotting him. It is often done as a joke and the person no doubt likes to talk about it. It would seem that the responsible segment of the student body could see that these people are not allowed to get away with their ridiculous actions. They should be stopped before they turn in alarms or should be turned into the hall judicial boards. If a student takes a piece of fire equipment he certainly can not keep it in his room without being noticed. At this time that responsible students do a little something. Perhaps if students were forced to evacuate a building every time an alarm was turned in people would be a little more concerned about the issue.

Such a suggestion is ridiculous but there is something to be concerned about. Fire protection is no children's toy. The juvenile delinquents who are using it to get their kicks ought to stop or be stopped.

Dave Lammers

Genocide

An essay by Bertrand Russell, entitled "On American Violence," published posthumously in the March issue of Ramparts magazine, describes the general character of the war in Vietnam as "genocidal."

"The war has been fought from the air with napalm and fragmentation bombs, helicopter gunships and jet fighter bombs, the spraying of poisons on thousands of acres and the use of enormous high explosive weapons. Civilian areas have been declared 'free fire zones' and the policy has been one of mechanized slaughter. On the ground, search and destroy missions have used gas in lethal quantities, the killing of prisoners, and systematic interrogation under electrical and other torture."

One must look beyond the general mass media to determine the true extent of American genocide. David Delfinger reported after his trip to North Viet Nam in 1967 that no village over 600 persons had survived the American bombing raids, despite President Johnson's promise that only military targets were being attacked. The latest Guardian reports many other incidents similar to My Lai that have gone unreported.

This gruesome review is necessary because Americans have accepted the genocidal character of the war as "necessary." We realize that the purpose of destroying the Vietnamese is not to hold territory, but to inflict more pain, suffering, death, and destruction on the Vietnamese than they are able to bear. The tactics that Russell describes make little distinction between soldiers and civilians. We kill Vietnamese because they are Vietnamese, much as Hitler killed Jews because they were Jewish.

Jean Paul Sartre, in his essay, On Genocide, says that "genocide represents itself as the only possible reaction of the American government in the rising of a whole people against its oppressors."

Honeywell Corporation, which has been recruiting here at the school of Our Lady, at this "Christian university" this past week, is the main producer of anti-personnel bombs. In the Honeywell Report, (available in the Administration Building) there is this description:

"The main fragmentation bomb is the cluster bomb unit (CBU), which consists of a "mother bomb" filled with 640 small baseball-size secondary bombs called 'Guavas.' These 'guavas' are released from the mother bomb 1/2 mile above ground and dispersed over an area 10 football fields in length. They may be set to explode in the air, on impact, or after laying on the ground for some time. When they do explode, each one sends about 350 steel pellets flying in all directions with great force. The pellets do harm to concrete, brick buildings or weapons but they tear flesh, spiraling forward and rapping inside. Their erratic course makes removal extremely difficult."

In January of 1968 the Air Force spent $11,191,730 for 31,288,059 bomblets.

"We've seen reports of enemy soldiers actually being nailed to trees by these things," one officer commented. (December 14, 1967, AP)

I think we have a right to know from the Administration of this "Christian" university what war research is going on here. I think we have a right to know why Father Hesburgh allows the producer of anti-personnel bombs and other genocidal weapons to recruit here. It is not enough for the head of this university to say that he sees the nation "falling apart," or that he would end the war if he could.

The breach of innocence is daily being defined, we do our part. 300,000 Vietnamese lie dead: we did our part, and now we prepare fresh graves.

We, (students, faculty, administrators) must stand up, or continue to be the "white-washed sepulchres" of hypocrisy and complicity. Our silent witness to genocide will not go uncondemned.
Seniors to vote on six fellow nominees

OPEN LETTER TO THE SENIOR CLASS OF 1970

Below you will find brief biographies of the six Senior Fellow Committee. Each of these six men has already agreed to come to Notre Dame for four to five days in February. We ask that, in voting, you bear in mind that we are looking for someone not only with a sincere interest in Notre Dame but with a genuine concern for the student body as a whole, and not only for those who share his views but for all students. The candidates are: Michael Kelly, Chairman 1970 Senior Fellow Program LEONARD BERNSTEIN

Leonard Bernstein is noted equally for his work as a conductor, composer, pianist, and pedagogic flair. This American composer and conductor was born in Lawrence, Massachusetts in 1918. He studied music and became an accomplished pianist at Harvard University. In 1943, Bernstein was appointed Associate Conductor of the New York Philharmonic. His technical self-assurance under difficult circumstances and his intense, immediate and marked the benchmark of the New York Philharmonic. His work is characterized by a mature and thoughtful quality. In 1947, he became permanent conductor of the New York Philharmonic, where he has continued to create masterpieces, both in the United States and other continents.

When Bernstein was named conductor of the New York Philharmonic, he represented a new generation in music. A controversial choice, he brought to the orchestra a new and, at times, a new spirit. His reputation and influence on the public were unparalleled in his time. He became a critical factor in the world of music, and his influence can be seen in the way in which he shaped the orchestra's sound and developed its musical style.

Bernstein has composed a variety of works, including symphonies, ballets, jazz rhythms, and scores for movies. Among the latter, he wrote the score for West Side Story and for the film On the Waterfront.

CO at Notre Dame

(continued from page 1)

Always mindful of the fact that the student body is the most important aspect of Notre Dame, the committee will deal with the legal aspects of conscientious objection. Among the people serving as advisors to the club will be at least two qualified lawyers who will be able to answer most questions accurately and have the knowledge of material to uncover the finer details. This is necessary. The complexity and inconsistencies of the present draft law are confusing even for the most experienced conscript. In addition, it is safe for the inexperienced.

Returning to the legitimate C.O. position, little has been said here of the individual's right to protest to the draft. In the current context, the individual's right to protest is essential for the maintenance of a democratic society. The right to protest provides a mechanism for the individual to express dissent and challenge the powers that be. This is a vital part of the democratic process, and it is important that the student body be aware of this right and be able to exercise it correctly.

In closing the club will be a forum for the consideration of the alternative to military service. Patriotism is not synonymous with combat (although the men who have risked and given their lives certainly have been valiant) — it is a dedication to the highest ideals to which this nation is capable of as a people. The individual's autonomy is of highest importance to our society. The individual's right to protest and to dissent is fundamental to a democratic society.

In general the club is meant to be the information service to the Notre Dame community.

As a delegate to the 1968 Democratic Convention, he organized the Coalition for an Open Convention. He is a former President of the National Students Association which in widely considered one of the most beneficial national student organizations.

Lowenstein is widely considered "the most liberal man in Congress."

NUMBNESS BEFORE DEATH

Editor: It had many of the trappings of a Greek drama: the crowd of spectators gathered as in an amphitheater, the masked ritual players, and a choragos made up of the righteously incensed members of SLFC (Save the Lamb for Christianity). But as the crowd filed away, after all the action was over, anyone who bothered to read seriously the statement passed out by those masked players must have shared its bitterness. What followed would only re-enforce that feeling: out of the chorus stepped a figure robed in black, hands behind his back. "There is bitterness, yes. It is our duty to express our views to the world on the situation. It is our obligation that the United States Government, through its diplomatic niceties, the United Nations, or to observe the diplomatic niceties. The destruction of an entire people is an immoral objective, even in the most moral of wars. It can never be justified; it can never be condemned," R.M. Nixon, Sept. 10, 1968.

Editor: The choragos echoed, responded, saying: out of the chorus stepped a figure in black, hands behind his back. "There is bitterness, yes. It is our duty to express our views to the world on the situation. It is our obligation that the United States Government, through its diplomatic niceties, the United Nations, or to observe the diplomatic niceties. The destruction of an entire people is an immoral objective, even in the most moral of wars. It can never be justified; it can never be condemned."

Superman comics

Editor: To all my misunderstanding concerning the recent "fumb-borning" demonstration, I wish to make it absolutely clear that I participated in no way in the planning or execution of said demonstration. I fact I was as much in the dark about the final outcome of the demonstration as was that venerable Mr. T.C. Snead. I am too happy to accept Mr. Snead's kind invitation to engage in debate on the issues he mentioned near the end of his column. I leave it up to him to correct any misunderstanding that I may have had concerning the political analyses.

Malin Lincoln

Editor: Referring to Mr. Larry Overhau's letter in the Observer of Feb. 16, I am astonished that he would make such an attempt to attenuate the role of a great President in Abraham Lincoln's destruction, with such blatantly unqualified assertions. He stated that Lincoln was a definite racist, but with such substantive evidence of a plan, that anyone can allow such a powerful statement to remain without being given the proof to back it up? Let's not take this "it's okay, people!" approach. I am asking you to come out and support your statement, Mr. Owen! George Brown Notre Dame, Ind.
Israel calls for airline safeguards

Airlines stop mail delivery

SUWLENINGEN, Switzerland (UPI) -

An explosive device released in a Swiss air mail bag was examined yesterday before being loaded onto the Tel Aviv bound Swissair Coronado jet that crashed near here Saturday after an explosion in flight. Victims of the blast included 47 persons aboard the plane, the airline reported. Wvere at least 60 people injured.

Five Americans and 13 Israelis were among the 38 passengers killed in the crash. The nine crew members were all Swiss.

The Swiss government pleaded to exert every effort in pinpointing the cause of the crash and the cabinet ministers decided to hold an extraordinary cabinet meeting in Bern on Monday. In Jerusalem, Israeli Premier Golda Meir met with the cabinet for three hours to discuss the crash. At least one of the victims was announced yesterday that she Meir would make a special address to the Knesset parliament Monday on the disaster.

President Johnson urged the Israeli government to release American passengers aboard the plane. He offered to help in any way possible.

Laotian situation obscure

VIENETIANE, Laos (UPI) - The commander of Laotian armed forces hinted yesterday that Communist forces had the upper hand. A Laotian government official stressed that the flat was not filled.

The agenda for the meeting included addresses by Mrs. Petrou, the Director of Housing, and Carol Cusick, McCandless Hall senator and a member of the O.C. Off-Campus Housing Committee.

According to Cusick, the proposal of the Director of Housing would permit "S. senior not on scholastic or social probation" the privilege of living in housing approved by the Housing Office. The alternative proposal would allow any 21 year old student to live in housing with a parental signature to apply, provided that the quota for O.C. students is not exceeded.

Open meeting

SMC O-C

Housing

O.C. Off-Campus Housing proposals will be discussed at the open meeting of the SMC Student Affairs Committee tonight at 8 p.m. in Carroll Hall. All administrators, faculty, and students are invited to attend and express their views.

Laotian situation obscure

U.S. military officials in Vientiane said Saturday no Americans were killed or even involved in the fighting, but the Laotian government said a third of the force in the northwest was lost.

The Laotian government said it had received no reports on troops movements and said it had received no reports that any troops were in the area.

Although based on still sketchy details of the situation on the plain, the reports yesterday in Rome, two reports yesterday contradict earlier versions of the fighting there Friday and early Saturday.

To Butler with an eight-man squad

By Jack Schaefer

Notre Dame triumphed impressively 114-78 over West Virginia Saturday night before 11,350 fans in the ACC. Austin Carr once again set a new Notre Dame single game scoring record as he popped in 55 points (Carr broke his old school record of 53 set last season against Tulane). However, the game was not a very pleasing one for the Irish. In the process of destroying West Virginia two of the finest Irish players sustained injuries. Sophomore Doug Gemmell broke his ankle and is most certainly out for the season. Senior guard Mike O'Connell sprained his ankle and at last report he might be out for a week.

Gemmell had been playing good ball for the Irish since getting the starting spot against Illinois in Chicago Stadium on January 31st. Since then the Irish had won against Ohio State, Doug gave the Irish mobility and speccifically helped the chemistry of the N.D. game plan perfectly. Gemmell turned in some of his best performances against the better teams and his presence is going to be dearly missed come tournament time.

O'Connell's injury, though far less serious than Gemmell's, will cost the Irish a valuable reserve for the Butler game. Mike was in the process of turning in what could have been his best game when the injury occurred. He had 7 points, making all three of his shots and hitting only one foul attempt.

Saturday's starting five for the Irish included John Gallagher, Jay Ziznewski, Mike O'Connell, graduating seniors playing their last game home. Butler put in two quick buckets and finished the game with 8 points. It points mark a number of good performances for the Irish and throughout his career he has been loyal to the character of the team. "Big Z" has had some great moments while coming up from. Jay was especially successful in the Villanova game while playing opposite Howard Porter. One thing that can be said about Jay is that the crowd loved him. O'Connell has had his ups and downs but his performances of late have been very strong. He has helped to pull quite a few games out of the fire, notably this year's big Marquette game.

Good news for the Irish is the continued improvement of Jackie Meade. Jack had 13 assists as he continually sparked the Irish attack. Meade is adept at getting the ball to Carr and if he continues his fine passing the Irish will be very tough.

Austin Carr just keeps breaking records. Carr hit 20 of 37 field goals (point shooting) and 3 for 6 from the foul line. Austin had 39 points. Carr's performance was... (remaining text cut off)

Grapplers-runners-up

Jim Hansen and Phil Gustafson won individual honors in their respective weight classes but their efforts were not enough to prevent the Notre Dame wrestling team from finishing second in the Wheaton Invitational Tournament held Friday and Saturday in Wheaton, Illinois.

Augustana College of Rock Island, Ill., showed that they were the class of the tournament, totaling 74 points to runnerup finishing second in the Wheaton Invitational Tournament. Tom Clausen (118) and Ken Ryan (147) both captured third places while Tom Powell picked up a fourth in the 167 pound weight class.

Notre Dame will oppose the Illinois Institute of Technology Wednesday as previously announced) in the ACC. The Irish included John Gallagher, Jay Ziznewski, Mike O'Connell, graduating seniors playing their last game home. Butler put in two quick buckets and finished the game with 8 points. It points mark a number of good performances for the Irish and throughout his career he has been loyal to the character of the team. "Big Z" has had some great moments while coming up from. Jay was especially successful in the Villanova game while playing opposite Howard Porter. One thing that can be said about Jay is that the crowd loved him. O'Connell has had his ups and downs but his performances of late have been very strong. He has helped to pull quite a few games out of the fire, notably this year's big Marquette game.

Good news for the Irish is the continued improvement of Jackie Meade. Jack had 13 assists as he continually sparked the Irish attack. Meade is adept at getting the ball to Carr and if he continues his fine passing the Irish will be very tough.

Austin Carr just keeps breaking records. Carr hit 20 of 37 field goals (point shooting) and 3 for 6 from the foul line. Austin had 39 points. Carr's performance was... (remaining text cut off)

Southern Illinois, led by double-winter senior Alan Robinson, captured the Central Collegiate Conference meet Saturday in the Convention Center. The Salukis 85 points) scored enough points for a semi-final round pin to cop first place in the heavyweight division.

Three other Irish grapplers turned in good performances and managed to reach the semi-final round of the tournament. Tom Clausen (118) and Ken Ryan (147) both captured third places while Tom Powell picked up a fourth in the 167 pound weight class.

Notre Dame will oppose the Illinois Institute of Technology Wednesday as previously announced) in the ACC. The Irish included John Gallagher, Jay Ziznewski, Mike O'Connell, graduating seniors playing their last game home. Butler put in two quick buckets and finished the game with 8 points. The Notre Dame trackmen capped their season by way of good performances to close out this week and on the strength of their 19.5 record the N.D. team appears to be almost certain of a berth.

The Notre Dame trackmen capped their season by way of good performances to close out this week and on the strength of their 19.5 record the N.D. team appears to be almost certain of a berth.

Two-Mile and Distance Medley Relays and ND's Kevin McAuliffe took third in the Triple Jump. The host trackmen were severely handicapped by the injury to Mike McMannon, the versatile performer, who would have had an excellent shot at both the Triple and Broad Jump events. Mike's ankle injury forced him to miss at least two weeks of action. Now he is getting back in the swing of things on his personal progress but it is hoped he can make it back for tail-end of the outdoor season.
