Hall presidents won’t buck Trustees

The Hall Presidents’ Council in a meeting last night voted not to back any open confrontation against the Trustee’s decision on hall parietals. The meeting, held at six o’clock in St. Ed’s Chapel, turned out to be the longest in the organization’s history.

The presidents debated their response to the Trustee’s decision with the Student Body President John Barkett and with each other. Barkett himself, paused the discussion by referring to a letter he wrote to the hall presidents, suggesting that the parietal issue be dropped.

Before he began though, Badin Hall president, But Imhoff motioned to close the meeting to the public. The move would have excluded everyone but Barkett and the Notre Dame and St. Mary’s Hall Presidents. The motion failed 15-4.

In opening, Barkett restated that he was “tired of the parietal issue” and that time should be spent on “more important things.” He also expressed confidence that th Trustees would allow halls to determine their own parietals some time in the near future. This action, he said would depend on how much responsibility the individual halls display throughout the rest of this year.

Barkett emphasized how impressed he was with what he called “commitment” and “recognition” he thought the Trustees showed in his recent meeting with them. He cited their acceptance of the professional study of campus life as an indication of their concern.

According in Howard Hall president, Bob Ryan, “The people in Howard are tired of hearing strictly about parietals and feel that there are other things as pressing in the hall and on campus.”

Korean Hall president, Dave Loring argued that the parietal question was still an important one and called for strong action. “I believe that there is a need for confrontation. The parietals question is an element of the larger issue of whom is to run this University” –the SLC or the Board of Trustees.”

Others, like Buzz Imhoff, argued that there would be no need for confrontation. Although he was not in favor of dropping parietals as an issue, Imhoff said that there are effective means open confrontation for improving the present situation. Developing hall judicial boards into a more effective part of hall government was one approach he cited.

After more than two hours of involved discussion and repeated attempts by chairman Ed Motto to bring the body to a vote, the HPC decided not to call for confrontation. Motto himself moved that the HPC should not initiate any open confrontation against the Trustee’s decision. The motion was passed by a 13-5 vote, with one abstention. Two hall presidents were absent.

In other HPC business, March Gran Chairman Greg Stepic, appealed for the co-operation of the hall presidents in the upcoming March Gran raffle.

HPC Executive Coordinator, Fritz Hoefer, explained some of the guidelines that will be followed in the distribution of funds for hall projects. Walter Sworg also announced that the new student telephone directories were completed and would be distributed soon.

On renovating LaFortune

What it is and what isn’t

The residence Halls and LaFortune Student Center demand serious physical renovation, according to Student Government Executive Coordinator Bob Weaver. But according to Student Center Director Brother Frank Gorch, the Center provides “precisely what it is supposed to.”

In an address to the Trustees last week, Weaver spoke of the need for vast physical improvement in these two areas.

Weaver called renovation a need that must be recognized and “appropriate action” to be taken. Weaver contended that there has been an emphasis from the University on the development of the halls as well as a “rising tradition of strong hall governments.”

While these two factors have done much to facilitate good growth of the halls, physical renovation has simply not kept pace with it,” Weaver said. “In fact now, we’ve reached an impasse of sorts.”

“We are a lot of good things being done in the halls these days,” Weaver claimed, “but the Presidents, RA’s and rectors can do so much more given the physical means to do so.”

Specifically he recommended more and better lounge space, recreational facilities, kitchen facilities and section lounges.

Weaver has also asked the Trustees to consider what he called the “basic inadequacies” of the LaFortune Center. He has invited the Trustees to visit the Center and pointed out what he considered wasted lounge space in the Rathskellar and Fiesta lounge. He contended that “little provision” has been made for off-campus students and that very few recreational and social attractions are there for the students.

“It’s the same situation as in the halls,” Weaver stated, “LaFortune was probably more than adequate when it first opened. But changes in life styles and changes on the campus have placed such demands on the building that this is no longer the case.”

Gorch, however, disputed some of Weaver’s claims. Although he said he is “neutral on what they/student government) are demanding or seeking,” he argued that there is a “ample room” for meetings, study, and conversations.

Gorch said that he was “concerned” about the number of student organizations currently occupying space in the student center.

“If this continues,” he said, “the place may cease to be a student’s center.” Currently, seven organizations are seated in LaFortune.

SMC hall question postponed once again

by Sue Prendergast

The SMC Student Affairs Council in a closed meeting decided yesterday to postpone voting on the hall autonomy proposal for at least two weeks so that, according to council member Jean Seymour, its members can “research the matter thoroughly and form opinions.”

The Bill, originally proposed by Student Assembly members Darlene Gallina, Gary Curran, and Mary Kay Tobin had been passed by the Student Assembly and Student Affairs Committee before appearing on the Council Agenda this week.

The proposal, if passed would allow each hall to determine its own policies, including “the formulation and jurisdiction of hall parietals policy.”

SMC hall question postponed once again

Jean Seymour member of SMC Student Affairs Council.

According to Miss Seymour, Miss Gallina, who presented the proposal to the Council “did a tremendous job. She argued from the standpoint of the basic philosophy of hall autonomy. Miss Gallina also answered questions posed by faculty and administration Council members.

Miss Seymour explained what she saw as the reasons for the voting delay: “We want to see more data and have more information so we can make an intelligent decision.” She contended that Council members would especially like “to see the general basic concepts of what halls would do” if the proposal succeeds.

Miss Seymour declined to speculate on the proposal’s future but commented on the Council’s attitude: “Everyone was very open, they asked legitimate questions. The lines of communication are good at this point.” She added that she felt the faculty and administration Council members are looking for some indication that halls will take effective action in regulating community life.

Student Assembly Vice-President Missy Underman generally concurred with Miss Seymour’s analysis describing the meeting as “very optimistic.” She commented, “It was very pleased with the direction and tone of the meeting.

Iqbal Geoffrey is suing ND on grounds of racism.

Notre Dame - Saint Mary’s Theatre presents Studio I Production

MY SWEET CHARLIE

by David Westheimer

Little Theatre Moreau Hall, SMC

November 5, 6 - 8:30 pm

Reservations at 284-6176

Your Student Billing Card is yours at no cost at the Indiana Bell Business Office. So, if you live in a dorm you can make long distance calls from your room simply by telling the operator your card number.

Calling by Student Billing Card eliminates the 25¢ additional charge made on every station-to-station “collect” call within Indiana.

If you’re a dorm resident, get your card now!
Selective Service changes draft procedures

New Delhi - The official death toll in the cyclone and tidal wave that struck India's eastern coast rose to 4,000, but officials said that it might reach 20,000 or more. Newsmen at the scene of the disaster reported that many bodies were still floating in the rivers and the sea.

United Nations - China named Chiao-Jan Hua, her Vice Foreign Minister, as the head of a nine-man delegation to the United Nations. Huang Hua, one of China's senior diplomats and her present ambassador to Canada, was named as the permanent representative. The delegation was expected to arrive at the U.N. at the end of this week.

Stockholm - The 1971 Nobel prizes in physics and chemistry were awarded to Prof. Dennis Gabor and Prof. Gerhard Herzberg. Gabor, a Hungarian-born Briton, was honored for his invention of holography. Herzberg, a German now living in Canada, was chosen for his work on electronic structure and molecular geometry.

Washington - A 4 per cent increase limit on dividends was announced by the committee that will regulate interest and dividends during phase two of the economic stabilization program. The 4 per cent guideline was understood to be a signal to other boards as to what the administration would consider an anti-inflationary increase.

The new regulations make it possible for men who are not immediately susceptible to being drafted. Thus, when a man registers for the draft at age 18, he will be classified I-H because he is liable to being drafted until the calendar year in which his 26th birthday occurs. Likewise, a man who has passed his year of eligibility without being drafted because his lottery number was too high will be classified I-H. Beginning next year, the selective service system will determine after each lottery drawing the highest conceivable lottery number that could be reached by draft calls that year. Persons with a number higher than this cutoff will also be placed in category 1-H.

Draft boards will keep no records other than names and addresses of men who are drafted. Thus if the men need not contact their boards except when they change addresses.

Classification 2-A, which applied to all men over 35 who had held deferments, will be abolished. Draft boards will now destroy the files of men in this category.

After a man has had his file destroyed, he will no longer be required to carry a draft card. A new classification, 2-D, will be established for men who are not considered physically fit for the draft. It is for men who are considered physically fit for the draft.

...
Sunrise in Pakistan

Sunrise in Pakistan is a grim sort of greeting. The dead sit unburied on the ground; collecting flies since there’s no money in Pakistan to bury the dead. The cyclone of All Saint’s day has killed twenty thousand; the Associated Press estimates another two million missing. Except that they’re not really missing; they’re floating down rivers; half-visible; half-submerged in the mud. A fat Pakistani baby

- paraphrase of a National Lampoon joke.

Yes, Pakistan has become a sort of an institution—a disaster—a den country that’s slipped beyond the periphery of believability and has hence been institutionalized. Babies are ushered softly into existence there; sleep blissfully through the whole of their one-day existence there and are ushered softly out.

Yes, that’s the way it is in Pakistan. Sports fans! People hacketting at the elements and the fate of each other—until nothing remains on the ground except blood and festering human parts. And that’s how it is when the ground greets sunrise in Pakistan.

II

Here’s how it is at Notre Dame:

Colder now, with a wind. Cat Stevens first; then Pitt. We have to worry about parietals—can’t get caught this weekend.

Today the Pakistani relief people are going to collect for their project. They want a dollar per person; they’re not going to get it; they never get volunteers for their Halloween collection and end up with something like thirty-six. Associated Press estimates another two million missing. Except that they’re not really missing; they’re floating down rivers; half-visible; half-submerged in the mud.

III

Sunrise in Pakistan has a sort of sick pallor to it. Another day, another death. Another ten thousand deaths. Ten thousand deaths a day!

The Staff

Numbers of such numbing proportions lack a certain reality. It does no good to say that the death rate would wipe out South Bend in two weeks. We can’t see a city wiped out—cities don’t fit in our minds.

Indians and Pakistanis are dying at a rate of seven a minute. If you’re in the dining hall, the odds are that if the disease, war, filth and natural disaster of India and Pakistan were distilled and distributed with the more conventional fare you are consuming, it would wipe out your table in three and a half minutes. If you live in a quad, it would take twenty-eight seconds.

Well, so there’s a collection to take care of. Tonight. But you know about collections at Notre Dame. So they might as well gird their loins in the dining hall, the odds are that if the disease, war, filth and natural disaster of India and Pakistan were distilled and distributed with the more conventional fare you are consuming, it would wipe out your table in three and a half minutes. If you live in a quad, it would take twenty-eight seconds.

Q. What weighs 2 pounds and crawls?

A. A fat Pakistani baby

— paraphrase of a National Lampoon joke.

Steve Lazar

On the Liberation of Women (and of all other Human Beings)

To begin with, let us adopt a profound view of woman; profound, and yet so marvelously simple: woman is a childbearer, her body protects and sustains first life, and has evolved to this biological yes. And by one, that is born and nourished by her biological function: woman is a partner for man. Let us, too, define man: man is the complement of woman, the source of seed from which first life springs. So too, he is a partner for woman.

Man is defined a biological sex, and a very true one; but it is a bit too simplistic for any place other than the Garden of Eden. In fact, its simplicity is a bit too honest even for there, there where the most fundamental prejudice ever devised against woman has been handed down through the generations as if it were the will of the Supreme Being.

These things we have said now are true, but this is not the Garden. This is the twentieth century, and there is a difference. We find that somewhere in the progress of humanity from the Garden to the twentieth century, civilization was slowly developed from its crude beginnings. Strangely, however, this formation of civilization was the work of man alone; man, left to rear his children and refresh the ego of his husband—was excluded. Thus she became homemaker and the protected sex. Man became breadwinner and protector, and thus socially and psychologically the dominant sex. Her passivity and inferiority reached such symbolic extent that she came to be regarded as the property of man, who, when he took her for his mate, symbolized her ownership of her by impairing to her his name.

We in the Western world can trace the development of our civilization through the Greeks and Romans, the Hebrews and the Europeans. All of these civilizations, at the time they were flourishing, were male-dominated societies. We have maintained this aspect. Man, in fulfilling his role as protector and sustainer of the lives of his wife and children, has at times thought it necessary to destroy the lives of other men so that he could survive and grow. Women, as the passive and neutral partner of man, was taught to keep her place and accept the benefits of conquest that man would bring her. This has been the way of humanity for tens of centuries.

But this is the twentieth century, and civilization has changed. Survival is no longer a matter of the triumph of biological sex; it is a question of the whole hostile environment. The moral notion of equality has evolved to the extent that it is written into the constitutions of nations. Slaves have been set free. But despite all this, the male-dominated society has persisted.

Women are demanding that this cycle be broken, and rightfully so. They have seen that the methods of a male dominated economic society include discrimination against and exploitation of women, furthered by a kind of psychological brainwashing that trains them to inhibit the expression of their talents. This type of domination of man over woman has become immoral. For by discriminating against humans because of their sex and by commercially exploiting their unique attributes, men have turned women into commodities. By maintaining that women should be passive in all social relations the commercialist male has simply made it easier for women to be manipulated for his own selfish gain. This is no less than a fundamental immorality. It is an immorality that the male dominated society as a whole must bear, just as it must bear responsibility for its other products—wars of genocide, espionage, environmental destruction. Your life becomes clearer with each day that the condition of society is in need of change—change of a moral sort as well as a social one. And it is evident that such a change will not be accomplished by men alone; women must step up to be among the leaders. They must not only gain their equal rights but must also exercise a moral force superior to the men who now run the society. Their moral leadership is urgently needed; their disappearance among the leaders of our life—whether it be housewifery or breadwinning—is not needed at all.

Woman, who is perhaps a more moral creature than man because of her closeness to the creation of first life must become all that she can be, and yet must refuse to put on the shackles that man has built upon himself. And if she can do this, surely her partner, man, will follow, and surely their civilization will change for the better.
Two of the most frequent questions I get asked in my speaking trips back to the halls is what has Student Government been doing, and what is the job of the Student Body President really like? Since I have not spoken to you all yet this year, I wish to take this opportunity to answer these questions.

The first question is easy to answer; though I'm not sure where to begin and I have to be brief. We have $10,000 to give back to the halls, as we said we would last spring. Student Government personnel have been in 15 halls since Freedom speech to orientation to check on the halls. Orlando Rodriguez, the Vice President, and I have reached eleven halls in the past few months, and I have scheduled in the next four the two weeks. Senate elections were held a month earlier this year than last year and the Finance Committee hearings and the Senate meeting on the budget went quicker and smoother than anyone can remember. I congratulate Cass Renent publicly for the second part. The second part of the second part will be

Perhaps the biggest accomplishments were achieved after Bob Weaver, Orlando Rodriguez, and I spoke at the deficit this year, the Trustees made a commitment to them selves to a survey of student life to help all of us where to begin and I have to be brief. We have proving the conditions of student life at Notre Dame. Orlando Rodriguez, the Vice President, and I last spring. Student Government personnel have been in

Tom Hamilton said.

Each student on the two camps may turn in their contributions at the Off-Campus office of La Fortune Student Center, Hamilton said. According to Hamilton, "We hope to raise at least $10,000. Each student on the two camps is capable of giving a dollar."

"I want to emphasize the extreme importance of raising this money in view of two recent developments," he continued.

"On Friday the Senate cut off all foreign aid. This included the money that was going to be used for emergency relief aid for the refugees in India and Bangladesh." "The situation was further complicated on Friday and Saturday when a devastating cyclone hit India about 120 miles from where the cyclone hit last year. It occurred in Bangladesh in the state of Cattack which is just off the Bay of Bengal. Estimated that between ten thousand to twenty thousand people have died. An additional five million have been left homeless."

"Senator Edward Kennedy, " commented Hamilton, "has said that 400,000 refugees will die every day. And since refugees are better fed than the other victims and the children are the best fed of the refugees it is estimated that 10,000 people will die every day.""}

**Door to door fund drive**

by Greg Rowinski

Students World Concern will conduct a door-to-door campaign tomorrow between ten and midnight in each of the halls to raise money for the victims of natural disasters and civil strife in India and East Pakistan, according to campaign chairman Tom Hamilton.

The SWC has appointed captains from each hall who will be in charge of the drive within their respective halls, Hamilton said. The captains are scheduled to collect money and disseminate information, according to the chairman.

Students who reside off-campus may turn in their contributions at the Off-Campus office of La Fortune Student Center, Hamilton said. According to Hamilton, "We hope to raise at least $10,000. Each student on the two camps is capable of giving a dollar."

"I want to emphasize the extreme importance of raising this money in view of two recent developments," he continued.

"On Friday the Senate cut off all foreign aid. This included the money that was going to be used for emergency relief aid for the refugees in India and Bangladesh." "Senator Edward Kennedy, " commented Hamilton, "has said that 400,000 refugees will die every day. And since refugees are better fed than the other victims and the children are the best fed of the refugees it is estimated that 10,000 people will die every day.""

**Mexican American groups dispute Senator**

Four Indiana organization of Mexican Americans, two of which are at the University of Notre Dame, denounced recent assurances by state senator Earl Wilson that Indiana migrant labor had adequate living conditions.

The Midwest Council of La Raza, associated with the Institute for Urban Studies at Notre Dame, denounced Wilson's "apparently malicious effort against one of the most powerless and defenseless segments of our society," Ricardo Parra, executive director of the Council, said. "It is incredible how Mr. Wilson reveres the Neanderthal age of politics and dared to respond to the evidence statements after having visited only four camps."

Charging that conditions in migrant camps result from Indiana's "lack of interest," Parra pointed out that tuberculosis, salmonella, worms and dysentery are major health problems in migrant camps.

A statement from the Chicano students of Notre Dame organized in MECIA concluded, "we believe that Senator Wilson has reached an inaccurate conclusion. Therefore we demand that he be prepared to receive the evidence from the migrant communities and their representatives."

The United Mexican Americans of Indiana called for Senator Wilson's resignation from the migrant Committee and asked for an apology from the Indiana State Senate. The Mexican-American Committee said an apology would not repair the damage caused by Senator Wilson's statement, which had induced much apathy among the general public.

**Debaters shine**

Over the past weekend, the Notre Dame Debate Team traveled to the annual debate tournament of the State University of New York at Geneseo. The tournament attracted fifty teams from eighty schools, representing more than twenty states. The team of Seniors Tom Gies and Mike Wilson reached the final round where they lost a close 2-1 decision to the tournament winner. The team of Juniors John Borkowski and Brian Kelly reached the octo-finals where they also lost a 2-1 decision.

**New shorter black studies major**

Students enrolled in 24 hour majors will be able to obtain their second major in Black Studies with no more than 18 additional hours, according to Black Studies Director Dr. Joseph Scott.

Students will be able to do this by taking 18 hours, three of which are at the University of Notre Dame, Scott said. Since Black Studies is a program and not a department, there is no separate Black Studies Faculty. Faculty are designated and not appointed.

The "Black Experience" courses are taught by specially designated faculty members. Since Black Studies is a program and not a department, there is no separate Black Studies Faculty. Faculty are designated and not appointed.

There are currently eight professors designated to teach Black Studies programs: two in history, two in Sociology, and one each in Economics, Humanities, Government, and English. They will teach courses in history, sociology, political science, and economics. A professor in law may possibly teach a Black Studies course in law in the future, according to Scott. Five of the eight are Blacks. Five have obtained their PhD's, while the other three lack only their dissertations to be awarded their degrees. All have published works and are active in research. Each is a "legitimate scholar," according to Scott, and each is expected to "make a legitimate contribution." Students interested in a Black Studies double-major must officially register in the Black Studies Office, Room 340 O'Shaughnessy Hall. Here, students can obtain more information about the major electives cross-listed under governmental and Black Studies numbers.

Those currently enrolled in Black Studies courses in their majors will automatically be given the double-credit overlap. Those enrolled in non-major Black Studies courses must register for the Black Studies major order to get Black Studies credit for those courses. Scott looks on Black Studies as "true liberal art course," outlining a "comprehensive approach to the problems facing Black America."

Scott encourages double-majors to take the 18 hours outside the specialized major in at least 4 different departments, to allow an "interdisciplinary approach."
It's Mike Crotty isn't overlooked

The Irish Eye

Phelps digs it at Notre Dame

If Dick "Digger" Phelps were an actor instead of a basketball coach, he'd undoubtedly have played a starring role in his youthful career.

Last spring, however, Fordham hoop fans wanted to cast Phelps the lead for "The Mission: Impossible." Mr. P helped solve that one. The 19-year-old, tall, and weigh only 180 lbs., then decided to work with his strength, where he had it.

Last spring, however, Fordham hoop fans wanted to cast Phelps the lead for "The Mission: Impossible." Mr. P helped solve that one. The 19-year-old, tall, and weigh only 180 lbs., then decided to work with his strength, where he had it.

"Well, Paul Shoults asked me if I'd ever played defense," said Phelps, "and I said yes." Then Tom Pagna asked me, and I told him yes." This was on a Wednesday, and they had us listed at safety by the time we practiced defender Saturday.

"I'd played both positions in high school, so it didn't really make any difference then. But things are different now. It's an option to be at safety now, because we have a real out-standing defense. We've grown up together and we've gone through a lot. Last year, the year before, we had Joe (Theissman), and that's been the dominant force." The defense was dominating force during the first five games of the season. But then the Irish run into the Trojans of Southern Cal, and John McKay's forces scored three times on the Notre Dame "D" within the first 20 minutes of play. The Irish bounced back last week with a shutout against Navy, but for Crotty and for the rest of the defense, the memory of the USC game is still alive.

"I doubt if we can ever forget it," Crotty said. "You don't forget games like that. I still remember it, because it was the first game from last year, and this year's game was the same thing. Everything just went right for them and wrong for us. It's not a real good feeling."

"I'd have to rate SC as the best passing team we've faced so far," said Crotty. "You can't forget that, because they scored on us three times (Edwin) Gressman has great speed, and we were beaten when we had to go man for man with him on a slippery field. But I don't think Southern Cal's quarterback is the best we've seen this year. Probably Danielson (Purdue) and DeNoguiza (Northern) have had the best arms."

As the Irish season rolls towards its November 20th conclusion in Baton Rouge, speculation continues to grow in the possibility-or impossibility-of another major bowl bid for Notre Dame. Even if the Irish managed to win the record when the bids are issued, their chances for a major bowl will be less than ideal, because of the many of the season's "showdown games" the Scholars Competition Nov. 20th (6:00 p.m.) deadline. Probably Danielson (Purdue) and DeNoguiza (Northern) have had the best arms.

Jim Donaldson

Young ND booters improving

by Lefty Ruschmann '73

Go and mention " football" anywhere outside America and chances are that you'll hear all about soccer-that same sport which most Americans avoid. At Notre Dame, where football is the only sport, you'll hear much of the "P" squad, more than their 2-5-1 record would hint.

One official at a major college coaching staff recently pointed to a Patterson star among Petties that is "unsure as to his future plans."

"It's hard to say just what he would do," said the coach. "If someone shows an interest, then he'd give pro ball a shot. It would be worth it, anyway-just to be able to say that I tried."" Irish back in top ten

After a week's absence, Notre Dame moved up from 12th to 10th by both wire service polls. The Irish, who have lost only one game against eight teams, now are the nation's number eight club while U.P.I. rated Notre Dame ninth. The polls were in agreement on the top six teams, putting Nebraska on top, followed by Georgia, Alabama, Michigan and Auburn. The A.P. reversed their positions this week and put Nebraska at six, U.P.I. at seven, Georgia, Tennessee, Alabama and Auburn.

November is the 40th anniversary of neoprene, the first of the useful synthetic rubbers. Developed by a Notre Dame chemistry professor and R. I. DuPont Company scientists, this versatile product was first announced to the world at the meeting of the American Chemical Society in Akron, Ohio, November 2, 1931.

Neoprene has come a long way since Rev. Julius Arthur Nieuwland, C.S.C., wore a raincoat made of his brainchild that "smelled like heck." As durable as natural rubber, neoprene is also resilient, good-weathering, flame resistant and resistant to many chemicals. He smuggled a short, black pipe and, if he happened to have been working most of the night in his laboratory, a stubble of beard will adorn his cheek.

If the journalists were surprised at the unpretentious life of Father Nieuwland lived, some scientists were appalled. An eastern researcher charged that "no one had expected the God-given genius of Rev. Julius Nieuwland, C.S.C., has wasted a major portion of his talents." He cited inadequate laboratory facilities and the lack of trained assistants as support to claim.

**WHEATIES.**

- "The bus is coming. Don't miss it!"

---

The interaction between a curious, absent-minded scientist and a resilient, good-weathering, flame resistant and resistant to many chemicals. He smuggled a short, black pipe and, if he happened to have been working most of the night in his laboratory, a stubble of beard will adorn his cheek.

If the journalists were surprised at the unpretentious life of Father Nieuwland lived, some scientists were appalled. An eastern researcher charged that "no one had expected the God-given genius of Rev. Julius Nieuwland, C.S.C., has wasted a major portion of his talents." He cited inadequate laboratory facilities and the lack of trained assistants as support to claim.
