Crosson attributes drinking to environment

by Kelli Flint
Senior Staff Reporter
Alcohol abuse is one of the major issues raised by students and faculty at Notre Dame. Last year, the Department of Psychological Services conducted a survey dealing with student alcohol use. The results of the survey indicated that there was a problem with student alcohol abuse.

Notre Dame percentages were also higher in the moderate to heavy drinking category for wine and spirits. Patricia Crosson, director of the Department of Psychological Services feels that there is a problem with alcohol abuse at Notre Dame. "There are two basic causes of the problem," Crosson said. "Many students arrive with well established drinking habits. The environment here is magnifying the problem rather than alleviating it."

Crosson added that the University has poor social outlets. "The campus never planned for this many students," Crosson said. "There is an inadequate amount of social space, which makes the environment poor for casual male-female relationships."

Some Notre Dame undergraduates disagree that all the required consent can be obtained by Saturday. If compliance with the cable companies cannot be obtained in time for the Michigan game, then the attorneys hope they can reach agreements with the companies in order to begin televising the remainder of the regular season.

George Roberts, chief counsel for the plaintiffs, said the agreement with the NCAA will result in a "strenuous effort" on Notre Dame's behalf to get Saturday's game televised.

The plaintiffs said they found the cable companies that they have contacted this past week to be quite cooperative, and consequently the lawyers are hopeful all the companies will agree to allow the airing of the football games.

Crosson added that the plaintiffs who initiated the charges against the NCAA are now faced with the challenge of gaining the consent of the cable companies by Saturday — if the upcoming Michigan game is to be televised. The attorneys, however, were optimistic that the cable companies will grant Notre Dame permission to have its games aired, but they said there is only a "50/50" chance that the games will be televised.

WN DU may broadcast home football games: NCAA

by Mary Fran Callahan
Senior Staff Reporter
Local lawyers and National Collegiate Athletic Association attorneys reached an agreement yesterday on the televising of Notre Dame home football games, by conferring for approximately one and a half hours out of court. The plaintiffs who brought the charges against the NCAA agreed to comply with the Association's regulations restricting the broadcasting of games for attendance reasons, but if the local lawyers can get each of the 40 cable companies involved to consent to granting permission to WN DU to teleview the games, then the NCAA will allow Notre Dame games to air on South Bend television screens.

**News Briefs**

by The Observer and The Associated Press

**Walkouts still plague Poland.** Although the communist country survived one of the most crippling strikes of the decade, lingering unrest still exists in a number of cities. Warsaw television reported 16 struck businesses and sources said walkouts had shut down the Katowice streetcar system and a half-hearing plant in Kielce. It was unclear whether the 16 strikes were the beginning of a new wave of unrest or the residual effects of the old, which began easing with settlement of disputes in Gdansk, Szczecin and Silesia last month. Those settlements granted workers the right to strike and set up independent unions. Details on the strikes were sketchy but the workers were believed to be pressing demands for higher pay, improved working conditions and in some cases the removal of unpopular local supervisors.

An explosion was reported early yesterday at a Titan II missile silo in Arkansas hours after Air Force officials discovered an apparent fuel leak and an undersized "smoke" hallway from the silo, a police dispatcher said. About 100 people living within one mile of the silo in this sparsely populated area of central Arkansas had been evacuated last night after the "smoke," thought to be vapor from leaking fuel, was discovered. A dispatcher at the Van Buren County Sheriff's office, who declined to give her name, confirmed there had been an explosion, but said no further details were immediately available.

The drug, Reserpine widely used to control high blood pressure, causes cancer in animals and may pose a similar risk to humans, according to the National Cancer Institute. The tests, in which animals were fed the drug for 103 weeks, do not prove that reserpine causes cancer in humans. But they indicate it is "a potential risk to man," the institute said. More than a million Americans take reserpine in various forms to treat mild hypertension and millions more have used it in the past. Figures indicate reserpine sales represent about one-third of the market potential risk to man," the institute said. More than a million

**South African public prosecutor, Adam Klein, who walked out of a court yesterday and refusing the country's policy on racial segregation, said police seized documents and personal items from his home, according to the Rand Daily Mail. In a published interview Klein was quoted as saying he was working on a report on irregularities in the disposition of cases a magistrate he could no longer stand by and watch the legal separation giving whites all political power. Klein was working on a report on irregularities in the disposition of cases a magistrate he could no longer stand by and watch the legal separation giving whites all political power.

The shotgun death of a woman was caused by a college football game when the woman tried to stop her boyfriend from watching the game on television. Homicide detectives said that reserpine causes cancer in humans. But they indicate it is "a potential risk to man," the institute said. More than a million Americans take reserpine in various forms to treat mild hypertension and millions more have used it in the past. Figures indicate reserpine sales represent about one-third of the market potential risk to man," the institute said. Figures indicate reserpine sales represent about one-third of the market.
John Van Wolvlear said, “We received too many complaints in the past from students who felt that they were forced into an uncomfortable situation because of peer pressure to spend the weekend in a hotel room with someone of the opposite sex. Vice-President of Student Affairs, Father John Van Wolvlear said, ‘We had to take a stand.’”

If the University is going to sponsor an activity, it must be run in accordance with University philosophy and policy,” Turzai added. “They’re wrong,” Huot continued. “We’re old enough to deal with the situation ourselves.”

“No one is going to be checking to see that everyone is in their rooms,” Pedi said, “but we have a responsibility to our corporate conscience as a Catholic institution. If the students can deal with it in their own consciences, that is their own decision, but if the formal is to be sponsored by the University, this is how it must be done.”

Pedi added that if he had been fully aware of the situation when he assumed his position in the Student Activities Office last fall, he would have made the same decision at that time. “But it wasn’t until the spring that I heard the complaints,” he said. “I can see both sides of this.”

Some Senior class officials did not view the situation in quite the same light. “It’s another example of the University telling us we’re not mature or responsible enough to take control of our own lives,” Senior Class President Mickey Turzai said. “I don’t feel that the University has the right to tell twenty-one year olds they cannot make their own decisions, whether or not to have sex, that the decision must be made for them.”

“If they haven’t instilled proper moral values by now, then they just haven’t lived up to their own expectations,” Turzai added.

However, this year University officials insisted that hotel rooms be arranged by sex and registration by handled through the Student Activities Office. “We received too many complaints in the past from students who felt that they were forced into an uncomfortable situation because of peer pressure to spend the weekend in a hotel room with someone of the opposite sex. Vice-President of Student Affairs, Father John Van Wolvlear said, ‘We had to take a stand.’”

If the University is going to sponsor an activity, it must be run in accordance with University philosophy and policy,” Assistant Director of Student Activities Father Mario Pedi said. “and the University does not condone cohabitation or off campus.”

Some Senior class officials did not view the situation in quite the same light. “It’s another example of the University telling us we’re not mature or responsible enough to take control of our own lives,” Senior Class President Mickey Turzai said. “I don’t feel that the University has the right to tell twenty-one year olds they cannot make their own decisions, whether or not to have sex, that the decision must be made for them.”

“If they haven’t instilled proper moral values by now, then they just haven’t lived up to their own expectations,” Turzai added.

...an activity...must be run in accordance with University philosophy and policy.”
that there is a problem with student alcohol abuse.

According to an off-campus senior, there is too much drinking among many students during the week. "There is a lack of social outlets other than bars," she said. "Students go out looking for entertainment, and there is nowhere to go but the bars."

Notre Dame's alcohol problem is shared by the majority of college campuses in the country, noted a junior who transferred to Notre Dame from another college. "On the whole, the drinking situation is pretty comparable," he said. "The problem is caused by a need for release from the pressures of the school week, peer pressure, and a need for acceptance."

The alcohol situation reviewed differently by some sophomores and freshmen at Notre Dame. "I don't know if there is an 'alcohol' problem with alcohol," a Notre Dame sophomore commented. "The students seem to be able to control their alcohol intake. I haven't seen any students who 'need' alcohol."

The sophomores added that there is a different situation on other campuses. "I've been to parties on other campuses," he said. "There is more drug emphasis on other campuses. I haven't seen any open drug use at Notre Dame."

One freshman observed that student drinking at Notre Dame is usually social and not heavy. "I think that most students drink every weekend," he said. "Speaking from a freshman standpoint, since most of the parties I've attended are for freshmen, the drinking is mainly social. Students usually have 1-4 beers when they go to parties to meet people, or get together with friends."

According to Kent Laudeman, director of Counselling and Developmental Services at Indiana University South Bend, the alcohol abuse situation indicated by the Notre Dame survey is also present at IUSB. "From a counselling perspective, we have similar problems with alcohol abuse," Laudeman said.

"We are an 'instant' society," he said. "We have in
stant coffee, instant cereal, etc. Alcohol brings 'instant' relief of social pressure and disappointments."

As a depressant, alcohol shortens the amount of time that a student can study effectively. Alcohol acts on the nervous system. Students may think that they are studying well, but they are actually only putting in time. Socialization, not alcohol abuse, is the main problem within the 17-21 age group, according to Kerenin Fryer. Richard Conyers.

"The problem lies in male-female relationships," Conyers said. "The males are perhaps more insecure than the females. The fact that females have been here for less than 10 years adds to the problem."

"When you run away from any problem, the problem doesn't go away, you just don't face it. As for the social life on campus, alcohol doesn't help the situation, it only delays the response to the situation," he added.

"Many think that because the alcohol abuse problem is acknowledged, it is solved. The Administration may be doing this by using a 'wringing hand' approach to the alcohol problem, which was brought to their attention last year by the survey results presented to them by the Department of Psychological Services.

"The alcohol problem in some instances is totally out of control, Conyers continued. Alcohol use in public is not addressed very carefully by anyone. The use of alcohol on Green Field is a good example of this."

Conyers and Conyers agree that improving the socialization conditions at Notre Dame would help alleviate the alcohol abuse problem. "Setting, rather than negative expectations, higher, more positive alternatives to alcohol use for socialization would help remedy the situation," Conyers said. "Students see many negative expectations and not enough positive alternatives to alcohol use."
Against Reagan

Carter denies accusation

WASHINGTON (AP) - President Carter, who called Ronald Reagan to task for using the words "states rights," denied yesterday he was accusing his Republican opponent of "running a campaign of racism or hatred."

"I do not think that my opponent is racist in any degree," Carter said.

In a news conference dominated by the presidential campaign and particularly Carter's conduct as a candidate the president said he felt he had been running a race that "is very moderate in its tone."

The question has emerged as a major element in the general election campaign, which has been characterized in recent days by charges and countercharges between the Carter and Reagan camps on the twin subjects of civil rights and appeals for black votes on Nov. 4.

Reagan, in a two-sentence response distributed by his press secretary, said the news conference was "Jimmy Carter's desperate attempt to fill the empty chair at Sunday night's debate."

"It is time for Mr. Carter to stop hiding in the Rose Garden and participate in open debate where I can have the opportunity to refute his false ad partisan version of his record."

Carter's refusal to take part in the debate Sunday night between Reagan and independent presidential candidate John B. Anderson in Baltimore received only brief attention at the news conference, and Carter said he had accepted three invitations to face Reagan alone, without Anderson.

From the first question until the last, Ronald Reagan, and Carter's recent criticism of him, were the central theme.
Bike thefts annoy students, security

by Earl Rix

Bike theft is a recurrent problem at many college campuses and Notre Dame is no exception. Reported bike thefts that were as high as twelve a day during the first week of school have dropped off to two or three a day according to Rex Rakow, Assistant Director of Security.

With many bikes costing $200 or more, bike theft can be a class C felony—more than a minor annoyance to students and campus security.

Assistant Director of Security. Rakow further said that students need to re-register this year, but the new registration will last as long as a student stays here. In addition to locking their bikes, registering and reporting bike thefts, Rakow encouraged students to report groups of suspicious juveniles who might be looking for bikes.

"We need co-operation. We can't do it alone by any means," he concluded.

The Observer Friday September 19, 1980 - page 6

Three others also lying on the ground. I figured that if my bike were in the rack in front of the dorm, it would be safe enough. I was wrong," Doering commented.

The typical bike thief is between 13 and 16 years old. He may or may not carry a bolt cutter that can cut through lock chains and cables.

"I would guess that 50 percent of the stolen bikes were locked up," Rakow said.

He added that security took extra measures to reduce the anticipated high incidents of bike theft at the year's onset. Precautions included having patrol cars watch bike racks.

"We put people near the Huddle in plain clothes because student go inside for a quick Coke and leave their bikes unlocked," Rakow explained.

"We find a number of unlocked bikes every night and we bring them in and try to locate the owners. We have a number of bikes that are unclaimed and that is one reason I ask students to report bike thefts," he stressed.

"I also encourage students to register their bikes in the Lost and Found office in the Administration Building.

Chicago trip planned

The Latin American area student program is organizing a trip to Chicago for the play Evita, the London smash hit musical based on the life of Eva Peron, wife of the Argentine president. Tickets and bus have been reserved for Wednesday, Oct. 8. The bus will depart at 3:30, leaving time for dinner in Chicago. Tickets for the bus and theater are $24. Payment must be made to Professor Ken Jamison in the economics department by Monday. Telephone 2839329. A few seats are still available.

SMC freshmen elect new Council

by Diane Mazyrek

A twelve member Freshman Council was elected by 60 percent of the class yesterday at St. Mary's. To avoid a delayed announcement of the winners, student government officers decided to accept two more than the usual ten-member board as the result of a three-way tie. The 1980-81 Freshman Council includes Caroline Adornetto, Beth Aisthrophe, Carol Bingtinen, Mary Davic, Bridget Griffen, Elaine Hocer, Maureen Hughes, Keerrie McCarthy, Kathleen Reinette Salebry, their sophomore advisor, an elected representative from last year's freshman board, is Leslie Griffith.

The Freshman Council is the organizing body that plans the social, academic and spiritual activities for the class. On Sunday, the freshmen will receive an orientation meeting by student government leaders. The council will choose a chairman to head the group and represent them on the Board of Governance. At their second meeting each member of the council will submit applications for the commissioner positions.

The advisor and the chairman of the board will review the applications and assign positions based on candidates past experiences and talents.

ASUNCION, Paraguay (AP) — A Paraguayan radio station reported police shot and killed one of the suspected assassins of ousted Nicaragua dictator Anastasio Somoza in a suburb of Asuncion last night.

The broadcast identified the man as Hugo Alfredo Irurzun, an alleged member of the Argentine People's Revolutionary Army, a leftish guerrilla group, and said he was killed in a shootout with police.

The radio said the shootout took place in the Lavrae suburb of Asuncion. The broadcast said a person accompanying Irurzun escaped during the exchange.

There was no immediate comment on the report by Paraguayan authorities.

There are no immediate comment on the report by Paraguayan authorities.

Photos of Irurzun and a woman identified as Silvia Mercedes Hodgers had been distributed by police following the bazooka and machine gun attack Wednesday that killed Somoza, his chauffeur and a financial adviser.

Killer shrubs detected

IRVIN, Calif. (AP) — Scraggily desert shrubs that make their own pesticides may offer less harmful alternatives to poisons now made from expensive petroleum, says a University of California biologist.

He said the research is in very early stages. "We're still discovering reaction is, 'Forget it, this thing's not fit to eat.'"

Buy SHAKERS, AND MORE SHAKERS!

Buy your shakers by 1:00 p.m. Friday and be eligible to win 2 POCO tickets and 2 Homecoming Dance Tickets

On sale in the dining halls Thursday, September 18 (lunch and dinner) and Friday, September 19 (lunch).

And at St. Mary's 'college in LeMans Lobby.

Tippecanoe and football, too!

Kick off the game with Saturday brunch at Tippecanoe Place.

Kick the next game day off on the right foot at our special pre-game Saturday brunch from 10 AM to 2 PM. We'll put you in the winning spirit with fluffy omelettes prepared to your order, hand-carved steamship rounds of beef and ham, fresh salads and fresh fruits. Plus all the champagne you can drink. Just $8.95 for adults and $4.95 for children buys all you can eat. Now there's a deal that's hard to beat.
By Louis Breuer

A new game invented by a Notre Dame student could well become a major recreational sport in a few years. The sport, which is called "Sectorball," was invented by senior Gunnar Larsson, a native of Sweden.

Sectorball can best be described as an improved form of table tennis. Gunnar says, "A friend and I back in Sweden played table tennis so much that we got bored with it."

What they did was utilize a round table and place boards across it at right angles to each other. This divided the table into four sectors and provided them with a net. They began to devise rules for serving and playing the game. That was about ten years ago.

After much experimentation, rules were finally decided upon. A server hits the ball to the opposite sector from where the opponent returns the ball to any of the three sectors other than the one the ball was just hit into.

The game continues with the fundamental objective consisting of hitting to any sector except the one it just bounced in. Points are given when one player fails to return the ball correctly.

Gunnar and his friend then took their invention around their neighborhood Stockholm, where it gained popularity. "We built some tables for our neighbors and friends to see how they would like it. They did, so we decided to try and sell it," Gunnar explained.

Since he was not satisfied with standard ping-pong paddles, Gunnar designed his own paddle. The final product resembles a glove fashioned of foam rubber. Two thin plywood slats provide stiffness in both front and back of the hand.

"We were tired of our fingers getting in the way of the ball," Gunnar commented. Once he decided on the game's rules and design, Gunnar applied for patents in both Sweden and the U.S. The American patent was filed in November, 1977, and the paddle design patent in August, 1979. The table design is also protected under patent law.

Gunnar tried to market the product in Sweden, but the company interested failed to receive government funding necessary for the venture. Since April, he has been attempting to market the game in the U.S. through Kessler Sales Company.

"We thought we could get a lot better publicity through Kessler Sales Company than by doing it ourselves," Gunnar said. Thus far, Gunnar perceives some interest from Brunswick, AMF, and Wison sporting goods companies.

The game has advantages over table tennis. The new paddle design allows for greater control and flexibility. The table played on measures only four and one-half feet in diameter--allowing the game to be played in much smaller area than table tennis. For the athletic person, the game is much more fast-paced than conventional table tennis.

Gunnar has invested about $3,000 in patenting and promoting his invention. "I've simply says, 'I just want to see people enjoying themselves playing it.'"

... Formal (continued from page 3)

that the administrations of both colleges have a valid point. Hill added that she also believed that most of the seniors at Saint Mary's agree with the arrangement.

"I'm happy with the arrangement," formal committee member Ann Edghard said. "Given the choice of having single-sex rooms or not having a formal, I feel it's fair."

Turzai disagreed. "We could run it on our own, independently of the University," he said. "It's a matter of principle. It's time we stand up for ourselves and show them we won't tolerate being treated like children."

The second part of this article will deal further with background of the decision and vote by the senior advisory council, not to conduct the formal independently.

A rain soaked football field invariably hampers those players who rely on speed for effectiveness, who like to cut sharply this way and that before spotting their opening and sprinting for the goal line. A rain soaked football field tends to negate quickness. And if Michigan Stadium’s Tartan turf was anything last Saturday, it was rain soaked.

But luckily for the Wolverines, the slippery field didn’t bother a little guy wearing number 13 on the back of his jersey. Twice, with the score tied versus a superior team, quarterback Chuck Male sent fellow western, quarterback Rich Hewlett on 57-yard scoring touchdown against Ohio State and four passes for 141 yards and two scores in the Gator Bowl. Carter had no premonitions of immediate success on the grid iron when he first came to Ann Arbor as a freshman, not with Michigan’s grind-it-out image prominent in his brain.

"I could catch the ball pretty well, but I didn’t have that in mind coming up, my freshman year," Carter said Monday. "I didn’t think I could do as much as I did since I passed up going to places like Florida State, which is a passing school."

But with Wanger’s accurate throwing arm seeing a lot of action last season, Carter was able to conclude his rookie campaign with 17 catches and a 27.2 yard average.

Wangler, in competition with Hewlett for the starting quarterback position as the Wolverines’ prepare for Saturday’s Notre Dame slug fest, says, "A.C. is probably the best receiver in the country."

When asked how good Carter is, right, now, Coach Bo Schembechler, never one to throw a round cheap compliment about his own players, puts on his most serious face and simply states, "He’s very good."

Carter was a high school all-American in both football and basketball in Florida and rumors spread last year that his 4.4, 40-yard speed would be utilized by Johnny Orr’s carriers, as well.

But he decided to concentrate totally on football because he is a perfectionist, as witnessed by Mark Elanuksela

A rain soaked football field invariably hampers those players who rely on speed for effectiveness, who like to cut sharply this way and that before spotting their opening and sprinting for the goal line. A rain soaked football field tends to negate quickness. And if Michigan Stadium’s Tartan turf was anything last Saturday, it was rain soaked.

But luckily for the Wolverines, the slippery field didn’t bother a little guy wearing number 13 on the back of his jersey. Twice, with the score tied versus a superior team, quarterback Chuck Male sent fellow western, quarterback Rich Hewlett on 57-yard scoring touchdown against Ohio State and four passes for 141 yards and two scores in the Gator Bowl. Carter had no premonitions of immediate success on the grid iron when he first came to Ann Arbor as a freshman, not with Michigan’s grind-it-out image prominent in his brain.

Dreams Come True

by Brian Beglane
Sports Writer

The tale of how Don Kidd made his way to Notre Dame and then made his way on to the Irish football team is a story in itself. Here are some of America's great success stories.

Hard work—that has been the key to the gridiron career of the senior defensive tackle out of Cincinnati. Don Kidd does not have the outstanding speed or bulk (6'2, 245 pounds) of the great defensive tackles of today. But he has that drive and that desire to be the best defensive coordinator Joe Yonto. "What may he lack there he has more than made up for with hard work. His off-season practice and desire have earned him his present starting position.

Kidd made his mark on the Notre Dame football scene against the same Michigan Wolverines whom the Irish square off against tomorrow. In last year's season opener in Ann Arbor, Don scenery came up, he grabbed it.

"He just can't say enough about a player like Don," says Yonto. "His dedication—more than raw talent—has made him the player he is. He's one of those who does all he can to help everywhere."

"He just sort of laughed and shrugged it off."

"You've heard all that stuff before, but Joe Yonto makes you believe it."

"As far as I'm concerned, there is no other place I'd rather be," remarks the congenial fellow from Colon, Washington. "After I graduated from high school, I had it narrowed down to Stanford and Notre Dame and I have never doubted my final decision.

Pat graduated from Colon High School which had an unbelievable enrollment of 96 students. "It sounds ridiculous but there were only 96 students in the whole school. Even the coaches were surprised that five players from my senior class received scholarships to play college football."

"For Yonto, a Notre Dame assistant for 33 years as coach

Yonto guides defensemen

by Frank LaGrotta
Sports Writer

A long, long time ago, Joe Yonto decided he wanted to be a football coach.

"Ever since I was in high school, my ambition was to coach football," remembers Yonto, Dan Devine's defensive coordinator and line coach. "I really can't remember wanting to be anything else."

Ask him why and he'll tell you all about the challenge of coaching football—about working with people and building character and how the game of football is a lot like the game of life. You've heard all that stuff before, right? Right.

But Joe Yonto makes you believe it. Because he believes it.

"There's no doubt that I find my job a challenge," he emphasizes, "thumbing through the Michigan football press guide.

"Look at these guys," he says, pointing to a picture of the Wolverines starting offensive line—dually captained by Coach Bo Schembechler as "probably the strongest and fastest line in Michigan history."

"If you don't think it's a challenge to get ready for even a super team like this, then you're mistakes. And that's why I think this is the key to the offense squad like Michigan's."

Yonto calls himself a coach. But he thinks of himself as a teacher.

"That's what it's all about, really, he theorizes. "I think coaching is understanding. Understanding only X's and O's but people's personalities.

"For instance, I think it's important to know which of your players needs a compliment or a pat on the back to make him play better and which guys need a more forceful source of motivation—if you know what I mean."

With experience, you get a feel for that kind of understanding. And hopefully you become a better coach because of it.

And Yonto has plenty of experience.

"Sometimes more than I like to think about," he says with a smile that belies his serious tone of voice. This is his 17th season with Notre Dame and the 3rd autumn he will spend on the sidelines of a football field with a clipboard and a coach's cap.

Before that he was a player—for Notre Dame, of course. He was a fullback for the Fighting Irish from a guard the next year. Both of those teams won the national championship and when he couple that with the three (1966, '73, '77) titled teams that he coached for Notre Dame, well, it's interesting to note that Yonto has a national championship ring for every finger on his hand—including the thumb.

Ah, but don't dare ask him to start comparing teams.

"Let me see," he starts seriously. "We played some great games in the Sugar Bowl win over Alabama in '73."

"Or, for that matter the biggest game against Southern Cal in '77 or the Cotton Bowl or..."

Admirably, he makes his point.

"Hey, I remember every one of those games and every player I've ever had," he says, this time without one of his patented "I'm only pulling your leg" grins. "Sure I remember Alan Page and Mike McCoy and Ross Browner. But there were guys who got no publicity that played just as hard and gave Notre Dame just as much as any of them."

"I think that's the part of the job I like the most," he reflects. "Working with super people like those."

"And teaching."

"What have you learned from him?"

"That is a simple job, really," he reflects. "You see the information, you understand it and then you try to pass it on to your players."

"If you do that, the team wins and you are happy when she saw me get the sack and I guess she just went crazy right after the second."

"I tell you, making those plays was the greatest feeling of my life."

"Just getting the opportunity was a long time in coming for Kidd. He did not see any game action his sophomore year, and one of his first goals was to get his chance last season, appearing in eight contests."

"Looking back on it all, I guess I see it as just a lot of hard work finally paying off," says Don. "While you are coaching, you are also practicing, you dream about what it would be like and now that you have it...it's been worth it every second."

"I don't really think about how hard I have to work sometimes. It's been worth every second."
Band salutes gospel music

By Mike Shiner

Precisely two weeks ago the mind of Phil Pozderac was dominated by the thought of improving his college career against an All-Big Ten tackle named Calvin Clark. Preparing for his first start in a Notre Dame uniform, Pozderac seemed quite content with the challenge presented by an athletic of Clark’s caliber.

Needless to say, before the game against Purdue, all of Calvin Clark is a great player. At the end of last year, Tim Foley told me that he was probably the most intimidating guy he played against this year. With the realization that Clark is a great player, coach Boulac conveys the feeling that the hard work and additional body strength had indeed paid off. "We were very pleased with Phil’s performance. He is hustling on the field and assuming more of a leadership role. The thing is, he will get even better every game."

Now tipping the scales at about 260 pounds, Pozderac is just beginning to recognize his own potential. His performance against Purdue answered some questions as to just how well he can handle a big proven player such as Clark. A 6’9, 260-pound Pozderac, however, will pose a different challenge for both Pozderac and the rest of the offensive line. The Wolverines feature three, relatively small down linemen who are quick-footed and hard-movers. "Mike Trgovac and the Michigan linemen are cast out of a different mold than that of Calvin Clark. While Clark uses his strength to hit you one-on-one and read your technique, Pozderac uses his quickness to neutralize Boilermaker players."

"Mike knew what he had to do to make himself bigger and stronger," explains defensive end Paul Hanna and Calvin Clark.

"I've never been a quote person before," Pozderac notes as he reached to point out a "Er's touchdowns last Saturday—
"His first cut was beautiful, and the pass was perfect," the coach said. "Anthony has an amazing ability to get into position to catch a ball. The second time, when he was hugged, he was able to get the ball. In fact, Carter apologized for the cut when he came to the sideline."

It is doubtful that Carter will be able to get open as will against the experienced Notre Dame secondary this Saturday. Notre Dame is not Northwestern, but then again, sophomore Anthony Carter is all ready in a league by himself.

Unsung heroes

Shiner, Pozderac pair in trenches

by Gary Grassey

Despite all their good work against troubled Purdue, it remains to be seen how good the Irish really are. They are young and there are gaps in ability."

"I really didn’t know if (the offensive line) would gel as a unit because of the things people were saying about our inexperience and the guys we lost last year like Tim Foley and Rich Martinovich. "But as soon as the game started, we came together. We had to."

Shiner’s confidence is as strong for themselves as it is for the Irish, with four first-timers leading the charge around all-America center John Scully, including sophomore Shiner at left tackle, plowed through Purdue’s junk defenses for 413 yards in the Blue-Gold game as the number one prospect, ahead of Shiner, at left tackle. "But I knew I had a good spring and I know my competition would be tough," he added."

"I’ve always been a quote person before," Pozderac notes as he reached to point out a "Er’s touchdowns last Saturday—
"His first cut was beautiful, and the pass was perfect," the coach said. "Anthony has an amazing ability to get into position to catch a ball. The second time, when he was hugged, he was able to get the ball. In fact, Carter apologized for the cut when he came to the sideline."

...Kramer

"I would love the opportunity to be captain, but I wouldn't be disappointed. We have a number of capable individuals to fill the role."

According to Kramer, no one assumes the leadership role more readily than head coach Dan Devine. Speculating on who would be next year's field general, Pat exclaims, "I would love the opportunity to lead me, but the chance to be a part of it." Pat Kramer also credits former defensive line standout Mike Calhoun as being a major influence during his career at Notre Dame. "When things were going bad and the coaches were on our backs, we could always count on Mike to keep us loose. He handled pressure well and always managed to come to practice with a smile on his face." One of seven children, Pat was raised on a farm in the tiny rural town of Calico. A finance major, he is interested in the agricultural trade along the west coast and plans to become involved in the wheat trade dealings after graduation. Meanwhile, Pat Kramer remains content with his present location, happy to be at Notre Dame.

Graduate to a higher challenge.

Texas Instruments.

For years you've been proving to your professors just how good you are. Now it's time to prove it to yourself.

With a higher challenge. With Texas Instruments.

Prove yourself where innovation's the rule, not the exception.

As a matter of corporate policy, TI has built in budgets for new, innovative ideas. If you have a revolutionary concept that deserves to be put to the test, the money's there.

That's just part of the TI challenge.

Prove yourself in the world's "hot" technologies.

No technology is hotter, or more fantastic, than microelectronics. And no company is hotter in it than TI.

Example: The TI 59 handheld calculator has more than twice the primary memory capacity of the three-ton computers of the 1950s.

And look at these credentials: TI is:

• The world's leading supplier of semiconductors.
  • The inventor of solid-state voice synthesis.
  • The largest producer of microelectronic memory products.
  • The world leader in Very Large Scale Integration.
  • The primary supplier of airborne radars to the U.S. defense program.
  • The leading developer and producer of infrared and laser systems.
  • The world's foremost geophysical survey company.

Prove to yourself where you have the freedom to grow.

Because TI is like many companies in one, you have the opportunity to move laterally from one specialty to another as well as move up. Without changing jobs.

TI's advanced system for lateral career mobility lets you move up faster. Because the freedom to move sideways is the best way to compare technologies and define career goals early on.

The frequently published TI Job Opportunity Bulletin lists openings at all TI facilities and gives TI people first crack at them.

Prove yourself where it counts.

TI has been acclaimed as one of America's best-managed companies because we've stayed young and vital while growing big.

One major reason for our high energy is our move-up environment. New people don't get buried at the bottom of a pecking order, because there isn't one. So if you get a good idea your first week on the job, it gets heard. And you get rewarded.

At TI, you get every chance to show what you can do. And prove what you deserve.

Prove yourself in an international company.

TI has hometowns in 19 countries on six continents. You'll find manufacturing in Singapore, Dallas, Tokyo, Nice, Buenos Aires. And many other cities around the globe.

TI has hometowns to match your lifestyle. No matter where you call home. From New England to Texas to California.

Texas Instruments is interested in graduates from the following specialties:

• Electronics Engineering
• Electrical Engineering
• Mechanical Engineering
• Computer Science (Software/Hardware)
• Industrial Engineering
• Materials Science
• Solid State Physics
• Engineering Physics
• Engineering Science
• Metallurgy
• Metallurgical Engineering
• Chemical Engineering
• Chemistry
• Mathematics
• Plastics Engineering
• Manufacturing Engineering/Technology
• Geology/Geophysics

Campus Interviews

TI Consumer Products Group. From calculators and watches to home computers, electronic learning aids and more.

TI Finance and Accounting. For group divisions, corporate staff or multinational.

*TI Digital Systems Group. A leader in getting the computer closer to the problem through distributed logic and memory.

*TI Equipment Group. From calculators and watches to home computers, electronic learning aids and more.

TI Facilities Planning. From calculators and watches to home computers, electronic learning aids and more.

TI Information Systems Group. From calculators and watches to home computers, electronic learning aids and more.

TI Materials and Electrical Products Group. A leader in engineered materials systems and home appliance and industrial controls.

TI Information Systems Group. From calculators and watches to home computers, electronic learning aids and more.

TI Consumer Products Group. From calculators and watches to home computers, electronic learning aids and more.

TI Semiconductor Group. A leader in engineered materials systems and home appliance and industrial controls.

TI Corporate Research, Development and Engineering. Pioneering the technologies required by present and future business opportunities.

*Only those groups will be interviewing on-campus. If you are unable to attend these interviews at this time, or if you wish to apply with another group, send data sheet to: George Berryman, Texas Instruments, Corporate Staffing, P.O. Box 25498, M.S. 62, Dept. CG, Dallas, TX 75256

Fifty Years of Innovation.
Serious crime in heavily student-populated South Bend neighborhood: violent assaults, armed robberies, burglary and theft—has escalated drastically in recent weeks. Violence and crime is becoming more of the norm than the exception in these near-to-campus neighborhoods. It is essential that law enforcement do its utmost to combat this sickly trend.

While it may be too easy to accuse city and police officials for a lack of effort in police patrolling in these neighborhoods, there is only one way in which this problem can be fought. It must take a concerted effort on the part of each and every group that is associated with student life off campus—there are four in particular. The movement must necessarily involve everyone. Not just City Hall. Not just the students. Not just the police. And certainly not vigilantes.

Four key groups must all interact:

- The City of South Bend must show a sense of community responsibility. It is a major department of city officials—the city attorney, police chief, division chief, city council president, etc.—to discuss the crime issue. While the meeting was held in the office of Mayor Roger Parrett, the mayor himself was not in attendance. This indicates that off-campus crime may not be a city's list of priorities. It definitely should not be.

- It is a shame to think of what may have to happen in order for the city, and the mayor in particular, to realize that this problem is anything less than serious.

- The University must play a significant role in this matter. It is the first defense both for its students and for the community. The University, in turn, doesn't show the necessary interest in this matter, then it expected that the city will not become fully committed.

- In addition to any crime-prevention and crime-awareness programs that the University should organize, it is vital to the city's overall success effort that student leaders make this a top priority. This goal not have their hands totally tied.

The Student Government and Campus Commissioner Mark Kelley have such a difficult time trying to reserve an auditorium, or meeting place, for all students to meet and discuss the crime issue. Why are certain departments and officials so unresponsive? How can they be so unproductive and, as a consequence, so irresponsible, technologically as they appear to be doing?

Few people in this country know anything about Japan prior to World War II; fewer still speak the language. Fewer yet, understand the labyrinth that is Japanese culture. So Sho-gun is providing America with a basic history lesson in Japan. And what better way to educate the populous than by presenting a one to three hour color television telecast in the living room of every house with a TV.

The second reason America loves Sho-gun is the violence. If you do not claim to have watched each episode, you can safely say that you have seen the majority of what has been shown so far; however, in the few matches of NIC's prime-time color I have caught, I witnessed several decapitations numerous 'awful sword battles, and an extremely gruesome scene in which a Japanesse refuses to submit to the potential is there for America to talk about... Sho-gun makes the re-run.

Guess what I am trying to say is that when something is as popular as Sho-gun seems to be, its marketable potential boggles the mind. This country underwent a fascination with all things of the last century when archeological discoveries of the pyramids were getting much play in the media. The potential is there for Japanese fashions, interest in the martial arts and Japanese philosophical disciplines. Sho-gun II, and everything from Sho-gun lunch boxes to bumper-stickers.

In any case, the show has given Richard Chamberlain's career a boost, and has given Americans who otherwise would not have known anything in common, something to talk about. Sho-gun may have reinforced my belief that America, particularly college community, loves violence; but we do see an increase in understanding and appreciation for Japan and her culture, it will have been worth it.

Student leaders let down on off campus crime

Dear Editor,

The recent discussions on what Notre Dame should do about off campus crime are absurd. Many of the suggestions made by student “leaders” in The Observer and around campus reflect, in other, hypothetical cases, a shaky attempt to solve the issue and reduce it to an absurdity. If you’re serious about this issue, please write seriously.

John Kisall

Kenney watch Syndrome with blindfold?

Dear Editor,

In regard to Paul Kenney’s article on Friday, Sept. 12, on the China Syndrome, I would have to ask if he saw the movie that bears that same title. If he did, then he must have been watching and hiring with everyone else, and not paying much attention. Paul Kenney was so guilty of such sloppiness that he quoted out, “as anyone who took a high school course in physics knows,” power reactors simply do not explode like a nuclear bomb. Paul Kenney directed the point elsewhere and understood.

At no point in the movie, at least the one I was watching, did anyone mention the possibility of a reactor explosion. What the melodramatic experts were speaking of was a reactor core being too hot. You know, they called the movie “The China Syndrome” because of the theoretical possibility of overreacted nuclear reactor causing the containment, all the way through the core. The quick expert added that the reactor would only reach such a state. The sudden cooling of the core would cause a huge cloud of radioactive steam to build up, the air, spreading radiation through the atmosphere. Absolutely.

Admittedly, the “good guys” do get all the best lines, but that is because they’re the stars. You see, if the bad guys got all the lines, then they’d be the stars.

Dear Editor,

This is not for the timid, the faint of heart or for the faint of spirit. The sudden cooling of the core would cause a huge cloud of radioactive steam to build up. If this isn’t a good argument for the usage of solar energy, I’m not sure anything is. The sudden cooling of the core would cause a huge cloud of radioactive steam to build up.

Ken Nyeck

Cockrell blatantly boycotts reason

Dear Editor,

In response to Dave Dondek and Kenney’s editorial, “N o more boycotts,” I would like to point out that The Observer has missed an important point. To be sure, he has presented a very timely and thoughtful article. Mr. Cockrell seems to be entirely concerned with keeping up appearances. I hope, however, that this is not the case, to merely “inflct moral harm or at least some inconvenience” to the boycotted party, sabotage and violence then become secondary concerns. Sabotage and violence, no matter what end is posited, is the epitome of anti-social acts.

equal in importance to the ends gained are the means used. By voting to boycott, a time honored method of non-cooperation, N.D. students have, in fact, created one of the most difficult road to social change. Non-violence and non-cooperation require a very high level of conviction, self-discipline, and endurance. Questions such as these may be im mediately upon the decision to advance. Is it worthwhile? Is this decision to act, however, and the subsequent vote to boycott, the time, the means, the ideas, the self-discipline, and endurance begin to lose meaning. Without such a be ginning, future and more effective actions might never come about.

One last note. The last six paragraphs of the editorial are a prime example of the logical fallacy reductio ad absurdum. The question is a boycott of Nestle and Campbell’s products. The reasoning is that, bringing in other, hypothetical cases, it is shaky at best. In this regard, the move and issue reduce it to an absurdity. If you’re serious about this issue, please write seriously.

J. R.

Conventions, simple and easy-to-use. So is the writer, puzzled, or not?

Was some knowledge or wisdom to be gained from that article? I did not find any altern ative suggestions for the “deplorable convention that puts up barriers in male/ female relationships.” (If I had enough trouble trying to understand what the editorial was for then I closed the paper and went on.) The closing paragraph was a dead-end: “To try and work through the fear and complications of a male/female personal relation ship can be painful and sometimes unsuccessful... How much easier it is to just follow the conventions and never break down the barriers.” How much easier it was to read the weather report.

Eileen Richichi

Saturday issue a hit in Chitown with Alumni

Dear Editor,

I was pleased to see your special Saturday issue this past football weekend during the Notre Dame-Michigan game. I was in Chicago, Ill., in interesting to read what activities are occurring on campus. I was especially grateful to see the expanded coverage which you are giving to the football game. As someone who participated in the sport on a college level and who is still attending Notre Dame, I feel a special pride in helping the University achieve its goals in the growth of the sport and finally gain it stature.

While I have not had the pleasure of watching Lovejoy play, your sports section has been in some of the research. Kevin will not be the first All-American for N.D. in the sport. In the late 1960’s a club player received All-American status and as recently as 1973, another club player, a team-mate of mine, received All-American Honor a ble Mention status. His name was Bob Donovan from Massacusetts.

This recognition is all the more memorable considering the club status of the sport at the time.

Hope this is of interest to you. Keep up the good work.

The Football, Chicago, Ill.

America losing energy race

Dear Editor,

There’s nothing worse for a sports fan than to wake up Monday Morning Quarterback, than a Monday Observer article, about conventions, on conventionalities.

Since everyone “knows” that certain situations certain conventions have to be observed, I did the Observer spend a 6x10" space on what we already know? Wasn’t there any other news to print on p. 2?

The ideas presented in the “Conventionalities” are vague, and certainly weren’t funny reading. According to the article, it is a “puzzling fact” that everyone follows conventions. Yet this statement is followed by...

Paul Lewis

Not old enough to purchase chips in South Bend

Dear Editor,

On Tuesday, September 16, a friend, Juan Smeda from the University of Chicago, and I were dialing into Quaker Oats and visiting a restaurant in the University of Notre Dame’s King’s Celler located on Rte. 31 in the South Bend area.

The attendant claimed that one must be at least 21 yrs. of age to purchase anything in the store, which had an obscure sign pointing this out. We thought it was a joke, so we began to laugh. The attendant, “In my state, I’m old enough to buy potato chips!” The attendant assured us that Indiana has certain laws for the younger than 21.

Not only are potato chips a good food, but they can be used to buy things in your favorite restaurant.

Carlos M. Barco

Chicago, IL

Brazzili too conventional on conventionalities

Dear Editor,

America’s energy problem is not a crisis, it is a face to time. The government’s misconception of the nature of the problem and its ineptitude in providing a consistent plan for future energy provision has turned a solvable problem into an international crisis. Although President Carter recently gave himself an A grade for his handling of the energy policy, after the efforts of the three different administrations, it is clear that any attempt at a meaningful debate, the energy problem in America remains unsolved.

America’s energy crisis is a problem of approach. Through fusion power and solar energy we already possess the technology to meet our energy demands for the future. The critical issue that has resulted from the direction Washington has taken is the lack of a solution to the problem. The basic flaw in the government’s energy policy entailed growth after the oil embargo in 1976, when President Nixon announced Project Independence. With the goal of achieving national self-sufficiency in energy supplies by 1980 the problem with the Nixon approach was, in fact, carefully planned use of the vast potential energy sources (solar, wind, fusion) for the future. President Carter, through fusion and solar energy, has taken over for President Nixon. The current role of fusion power entails enormously more energy than solar energy, which is contained in hydrogen, deuterium, which is contained in seawater. The environmental impacts of these energy sources will only be with us for a short time, then coal and nuclear power plants forever and we can get to work cleaning up the atmosphere and the oceans.

While I have not had the pleasure of watching the film, he must have missed the part that won the Oscar.

The sudden cooling of the core would cause a huge cloud of radioactive steam to build up.

T. J. Fortner

Washingtion should do this.

America’s energy problem is not a crisis, it is a face to time. The government’s misconception of the nature of the problem and its ineptitude in providing a consistent plan for future energy provision has turned a solvable problem into an international crisis. Although President Carter recently gave himself an A grade for his handling of the energy policy, after the efforts of the three different administrations, it is clear that any attempt at a meaningful debate, the energy problem in America remains unsolved.

America’s energy crisis is a problem of approach. Through fusion power and solar energy we already possess the technology to meet our energy demands for the future. The critical issue that has resulted from the direction Washington has taken is the lack of a solution to the problem. The basic flaw in the government’s energy policy entailed growth after the oil embargo in 1976, when President Nixon announced Project Independence. With the goal of achieving national self-sufficiency in energy supplies by 1980 the problem with the Nixon approach was, in fact, carefully planned use of the vast potential energy sources (solar, wind, fusion) for the future. President Carter, through fusion and solar energy, has taken over for President Nixon. The current role of fusion power entails enormously more energy than solar energy, which is contained in hydrogen, deuterium, which is contained in seawater. The sudden cooling of the core would cause a huge cloud of radioactive steam to build up.
For the past four years the Molarity comic strip has been digested along with ground-beef casserole and chicken chow mein in the dining halls during lunch. Nearly everyone in familiar with Jim and the other characters in the strip, but few know anything about Michael Molinelli, the man behind the cartoons.

Molinelli began drawing the Molarity characters for The Observer during his freshman year at Notre Dame. Before that time the paper didn't have a regular collegiate comic strip. He submitted six cartoons to be printed under the editorial staff the next year, but his pertinency was missing to some extent. After the editor brought the suggestion to the attention of the editorial board, the cartoons finally began appearing daily during the last week of Molinelli's freshman year.

Now in his fourth year as a student of architecture, Molinelli will still have another year to continue the saga of the Molarity characters. In the years that have passed since his was first published, the strip has undergone some changes.

"For one thing, my handwriting has gotten better," Molinelli smiles, "but as far as changes are concerned, the characters are slowly developing. The development has to occur slowly because every year there are new students to life that must be introduced to the strip and it would be easy for them to become lost.

"I've probably become stylized since I began," Molinelli adds. "The emphasis is on making the strip funny—you can judge as to the result—but I'm not about to do anything for the sake of a joke."

Molinelli spends an hour and a half to two hours working on each strip. "It shows if I spend less time on them," he says. He has been drawing since grade school and as a high school student in New York, he drew character panels which were published monthly in the school newspaper.

Molinelli relies on the predictable issues to write cartoons that he can pull out at any time to comment on campus activities. "The cartoons are done a week ahead of time so I'm able to interrupt them if an issue comes up. I like to maintain that spontaneity."

Some of the spontaneity was lost last year while Molinelli was studying in Rome. He drew up the predictable strips during his summer break and the rest he sent from Rome, but his pertinency was missing to some extent. While he was in Rome a rumor was spread around campus of his alleged death. He was not only aware of the rumor, but he says as a gift, "I started it."

"I did it to play up the fact that I wasn't around," he explains, "and to take advantage of my absence. I'm a big Beatles fan, and got the idea from the death scene centered around Paul McCartney. I just wanted to have some fun with it." In the past four years, Molinelli has had two negative responses to his jokes. The first was a hate letter he received as a sophomore from a campus paper in regard to the strip reprinted in this article. The maid wrote that she didn't have to meet Molinelli to know what kind of man he was. She added that his jokes smelled and she was sure he did too. Molinelli says that he wrote back and said he was sorry that she didn't like his humor of his cartoon, but he adds, "I've never apologized for my jokes and I don't intend to."

His second disapproving feedback concerns the recent dolphin jokes. "I've had three responses," Molinelli explains. "Some didn't like it, period. Others complained that I was ridiculing minorities, and still others thought I was ridiculing minorities and liked it."

It seems there is a fine line between jokes that are funny and those that are offensive. At Molinelli sees it, "The nerve you must hit to make a joke funny is often the same nerve that creates an issue."

Of his jokes concerning NIP administration and faculty, Molinelli says, "I've instigated an administrator with two arms on a desk to hand me my jokes, the housing situation a couple of years ago, but I don't do blatant personages. My jokes are not meant as personal attacks."

When asked if Jim, the main character in the strip described by Molinelli as "the proverbial anti-hero with unapproachable is popular. He says, "I've insinuated an administrator with two arms on a desk to hand me my joke, several times."

Each weekly series of cartoons is approached with the attitude that the cartoonist must win his audience over. "I can't rely on a joke that was good two years or two weeks ago," Molinelli explains.

In a final word about the cartoon, Molinelli comments, "My luncheon cartoon strip, the sole purpose of which is to provide humor. With a smile he adds, "It beats eating tacos at least."

"No doubt there are many students who will relate with him on that point, Ellen Gorman is a St. Mary's student from Moreau. This is her first contribution to Features.

Syzygy-- A New Dimension in Art at Moreau

Sue Herbring

Although you may be aware that Syzygy refers to the holography exhibit at Moreau Gallery, you may be less familiar with the title's definition. Its meaning, "the relationship, ideally forming an intensively involved one."

Tyler works with white light transmission holograms and defractions. He controls the patterns of light waves to create 3-D abstractions, and never leaves the original image of light. The "lovers" image, for example, is made by a computer program and then assembled in a collage-like fashion.

Others have a more abstracted surface design with synchronous signals, which are holographic, for the eye to see. These abstract images are a result of a computer program and then assembled in a collage-like fashion.

His preliminary drawings—a combination of sketches, colors and textures which by means of a regulated rhythm and airy, pasted hues, acquire a poetic quality. The light, personal touch implied in his drawings, reveals to us that there is a Doug Tyler behind the hard-edged scientific approach of the holographic pieces.

This is the only beginning of Doug's exploration in this medium. He has been familiarizing himself with holograms for the past eighteen months, sided by a grant, and plans to introduce a holography class at St. Mary's next fall. His exhibit will only be on display until September 28 but will visit well worth the experience. It is open free of charge, from 9-11 a.m. and 12:30-4:00 p.m., and the gallery is closed on Mondays.

Sue Herbring is a senior art major at St. Mary's. This is her first contribution to Features.
He was certainly one of the Big Men on Campus in his Senior year. The night before graduation, he brought his parents to the Senior Bar, where he had carved his name on the walls of the john. He kept pumping tacos into the streets, reminding them that he knew how closely he identified with the Jo n es'! beat that! that his love mesmerized wife has gone do not alone make for an idealic movie shows that hot tubs and ferns scenario that you'd expect to compel wife(amply played by Ann Margaret) the upper middle class hoardes. and run away in search of his give his wife, kids, and job the boot, appeal and take off after the babysit­ paranoid that he has lost raw sexual to the swaying palms and acomadat­ looks at his populated suburban WAY."

**LETTERS TO A LONELY GOD**

Rev. Robert Griffin

There is a drama one plays in his inner circle when he has finished a flawless performance of Hamlet; he has sung Puccini as Carrasque, 'Middle Age Crazy' applauded by the King of Sweden as the Nobel Laureate writing the world's greatest novel. Whenever the crisis of one's creativity is reached, when the test comes in which a human being confronts his destiny, the testing will be solitary, and he'll have nothing to lean upon but his own strength alone.

It probably feels like that to be the Big Man on Campus. It probably feels like being Ol' Blue Eyes, or the Lone Ranger without the mask. Over a dozen times a day he has heard Frankie's disk. Only his parents, and his girlfriend, and some guys he lived with, and a teacher or two who had given him breaks on term papers, wondered what his "way" was. A year later, when he married the Boss's daughter, everyone knew which way was his way. When he goes out to night clubs, he still asks the folks at the bar, "How's the Big Man's Way?" His story is one of those success stories in America where the hero works himself from the bottom up with a great deal of integrity.

**REEL REVIEWS**

**Youthful Spree in 'Middle Age Crazy'**

Ryan Ver Berkmoes

don't want strings-i.e. good worry- free sex. In a move better befitting a horny adolescent, Burnett throws his career and family to the winds, in a tradeoff for the cheerleader, unfor­ tunately the role demands that he asks abit to much of strings and unceremo­ niously dumps him. Our principal is not yet ready to be a father, not the most fortunate situation; no family, no job, no friends, no mistress, but he still has his 928. Here the movie takes a predictable turn and the final ten minutes are spent watching him learn what a naughty boy he was, how lucky he really is to possess many hot girls. The movie pace remains brisk, but the content doesn't.

The film enters the same detached state of it's central character. This doesn't mean it's not entertaining, it just lacks the creative bite that character­ izes an exceptional effort. Overall the acting is very good. Bruce Dunn has been trying to shed the image of a demented loony ever since he gained down John Wayne in "The Cowboys." His performance here should bury it forever.

Ann Margaret should reassure those viewers wondering about her role. She is certainly not a scenario that you'd expect to compete a man so important. However, the movie shows that hot tubs and ferns do not alone make for an idealic environment, even when the world is troubled internally. The movie opens with the celebrations of Burnett's fourtieth birthday party. Predictably, his love mesmerized wife has gone off the deep end in planning the (let's see the Jo n es'! beat that!) that rinsed yourself any Uncle George has ever made in super 8. As the evening rolls along, assorted friends and relatives remind Burnett of his point of no return to quit college but has gotten his bedecking himself in the requisite of it's central character. This doesn't mean it's not entertaining, it just lacks the creative bite that character­ izes an exceptional effort. Overall the acting is very good. Bruce Dunn has been trying to shed the image of a demented loony ever since he gained down John Wayne in "The Cowboys." His performance here should bury it forever.

Bruce Dunn becomes "Middle Age Crazy" when he hits 40, and acquires an eye for young women and adult boys.

Psyche staff announces workshops

The Notre Dame Counseling Center, staffed by faculty and graduate students in the counseling psychology program, is offering a series of workshops throughout the current academic year. Workshops scheduled for this semester include Assertiveness Training, Life and Career Planning, Study Skills and Stress Management. The workshops offer a blend of didactic and experiential learning, with special attention given to the particular interests of the participants. All workshops will be conducted in the Counseling Center (Room 400, Administration Bldg.) and are open to all students, faculty and staff of the Notre Dame - St. Mary's community. A limited number of participants can be accommodated by each workshop, so anyone interested is asked to sign up in advance by calling 283-5371.

The workshop on Responsible Assertiveness offers training in discriminating among assertion, nonassertion, and aggression. There is a particular focus on identifying and developing the beliefs, thoughts and actions that show a high regard for one's own personal rights as well as the rights of others. The 4-session workshop will be conducted in a group format that will include discussions, role-playing exercises and home practice activities. Sessions will meet Mondays and Thursdays, Sept. 22, 25, 29 and Oct. 2, 6:30 to 8:30 p.m.

The Life and Career Planning workshop is intended for individuals interested in exploring personal directions with regard to their vocations and their lives in general. The workshop includes structured exercises concerning career plans, an administration of the Strong Campbell Vocational Interest Inventory, and directed discussions to clarify each participant's values, interests and abilities as they relate to life choices. A $2.00 fee is asked of each member for computer scoring of the Strong-Campbell Instrument. Sessions will meet Thursday evening, Oct. 2, 9, and 16, 7 to 9 p.m.

The Notre Dame Counseling Center also sponsors a series of workshops in Kids' History, each focusing on a different aspect of history. The workshops in the fall semester will meet Thursday evening, Oct. 2, 9, and 16: 7 to 9 p.m. Each member is asked to sign up for two of the three workshops.

There is a particular focus on relating to life choices. A $2.00 fee is asked of each member for computer scoring of the Strong-Campbell Instrument. Sessions will meet Thursday evening, Oct. 2, 9, and 16, 7 to 9 p.m.

...Irish

(continued from page 24)

boom in Division I is threatening to keep the Irish from achieving their goal of national prominence. The word is out already that tonight’s opponent, Ohio State (8 p.m. on Cartier Field), has made the decision to make soccer a major priority. The Buckeyes don’t want to be second to State and a growing crop of other local schools. The immediacy of the Monogram Club’s plan is a mystery. Hunter’s opinions have never been solicited, before or since the University’s state­ment on minor sports and scholarships last spring. Thus, Notre Dame soccer remains in a crossroads-type situation. Allowing the team to continue in its present state would be a waste of talent and funds, let alone cross into the locale now reserved for Hoosiers, Billikens, and their kind.

The importance of the Monogram Club’s plan is a mystery. Hunter’s opinions have never been solicited, before or since the University’s state­ment on minor sports and scholarships last spring. Thus, Notre Dame soccer remains in a crossroads-type situation. Allowing the team to continue in its present state would be a waste of talent and funds, let alone cross into the locale now reserved for Hoosiers, Billikens, and their kind.

The Irish could patch up the areas where their personnel and system make their limitations, at best, fragile. The team still has the potential to grab a post-season bid, and, as I.U. coach Jerry Yeagley will attest, Notre Dame can pose problems for anybody on their schedule. The St. Louis affair was a combination of team breakdowns, but there’s no reason for an obituary yet.

What’s really needed is some word, one way or the other, as to whether the program will fizzle onward as an object of token applause and toleration, or become the dominant soccer force that it could be.

Sports Briefs

The Saint Mary’s volleyball team, coached by Erin Murphy fell to St. Joseph’s college 15-10, 15-8 and 15-6 last night.

The Belles will play at Grace College on Monday.

Notre Dame’s women’s tennis team swept Western Michigan today at 6 p.m. in the Rock.

The Michigan pep rally will take place today at 7 p.m. in the Student Center. Featured speakers are Peter Denemere, Mike Courty, John Hankerd and coach George Kelly.

Michigan to invade South Bend

AP) — Michigan’s Wolverines, promising an alter­native football game and marked improvement, in­vade Notre Dame where the Irish have had two weeks to prepare for the clash of the two ranked Midwest teams.

“I’ve always been a believer in the concept that a team’s greatest improvement comes after the 31-10 win. No, he wanted to see if the team could win another game. By no means, is it time to quit.

Would we walk out of any sport that we have had two weeks to prepare for the clash of the two ranked Midwest teams.

“I’ve always been a believer in the concept that a team’s greatest improvement comes after the 31-10 win. No, he wanted to see if the team could win another game. By no means, is it time to quit.

Michigan defeated the Irish 28-14 at South Bend.

The Michigan main weapon on offense against Northwestern was Arbonlin Carter, a wide receiver who caught two touch­down passes, returned two punts for 32 yards and two kickoffs for 60 yards.

**Defense!**

Senior Tom DeSanto has the tough task of filling in for an injured Steve Cichy tomorrow against Michigan. DeSanto will have a tough match-up to his hands as he tries to defend the speedy Anthony Carter at end. Joining strong safety DeSanto in the secondary will be Tom Gibbons and Dave Duerson.

**Irish outclassed in St. Louis**

ST. LOUIS — After wading through all the speculation and anxiety that began to grow once last Friday's routine 5-0 whitewash of DePaul came to a successful conclusion, it seemed reasonable to believe the arrival of the Notre Dame soccer team for their contest with the legendary St. Louis University Billikens would be much like that of an NBA rookie paying his first visit to the Boston Garden or perhaps a trembling right­footer making his first appearance on the mound in Yankee Stadium.

This was St. Louis, after all, and Billiken soccer teams have been fielding All-Americans and winning N.C.A.A. championships, a tradition that seems precise — for the past twenty years. This was the place where young American boys grew up to become Olympians and World Cup performers, even the bluff in the early edition of Sunday's St. Louis Post-Dispatch previewing the afternoon contest reminded interested readers of the relative disparities between the hometown wonderfoots and the guys from up north who'd probably be long on aggressiveness, but terribly short on ball skills.

However, there were no championship banners draped about the shoddy little cow pasture called Francis Field, when the Irish arrived to meet the Billikens for their contest with the legendary St. Louis University Billikens would be much like that of an NBA rookie paying his first visit to the Boston Garden or perhaps a trembling right­footer making his first appearance on the mound in Yankee Stadium.

Injured halfback Bill Murphy spent the better part of his summer back home in St. Louis stride­for-stride in town league playing ball with Billiken All-Americans and he'll tell you, "We don't have to be afraid of any of those guys." What Notre Dame could do with three, four, or five more scholarships to fill some gaps in their lineup, however, is acreate a national power, not just a competitor. And right now, the soccer

"This is the greatest bunch of guys I've ever coached," or "We get along great, there's a unique respect for each other, they care for each other and have humility. Humility? Big-time athletes with humility? Sometimes unbelievable, but nevertheless, it's true.

With athletes literally beating on your door, or hounding me to death about coverage, features, several days before the game, it's tough to interview, or at least discuss their own accomplishments.

"It didn't hit me until I started practicing, the senior, strong safety. "The only thing I really suddenly realized wasn't what I wanted. I always had a dream of coming back to St. Louis and being a head coach at Notre Dame, so I decided I'd better give my dream a chance or I'd regret it later on," DeSanto said.

DeSanto was no time consuming. "That dream is now reality. "The Miami, Fla., native left the Midwest and headed home to start earning his college tuition. One year and one acceptance letter later, DeSanto was officially a student at Notre Dame University, but his dream was far from complete.

"My decision to come here wasn't based on academics," related Tom, "and some people think that means I didn't come here to study. All I'm saying is that I could have gotten an education at a lot of different schools — I wanted to play football here," he says with conviction.

The former Columbus High captain (alma mater of ex-Irish player Lou Pagley and Alber Whittington) inclined closer to his gridiron goals when he "walked on" to the Irish roster. DeSanto possessed no illusions about the kind of role he would be assigned by his head coach, Butch Lukas.

"You can't expect too much as a walk-on. You have to understand that you're not a big name but just a body on the field. It's up to you to prove yourself everyday," DeSanto said.

"I had a practical approach to the whole thing," DeSanto continues. "I came up here with a positive attitude, but I knew I wasn't going to start on top. Rather than get discouraged, I just realized that I had to accept the role as a prep for the time being."

In doing so, the gapay back not only helped his teammates prepare for the opposition, but gained valuable experience himself, and impressed Dan Devine's staff with his unstoppable dedication. His performance was rewarded last season, as he participated in eight games and started for an injured Steve Cichy.

---

Do humility, football mix? by Beth Huffman in the season finale against Miami as he will do again tomorrow against the Wolverines of Michigan.

Credited with seven tackles and a blocked kick last year, DeSanto achieved his ultimate goal when he was given a scholarship following the regular season and three summers.

"With the coming of the 1980 season, I'm really not nervous about starting, just excited and happy to get the chance to play," DeSanto modestly reveals.

"I'm really not nervous about starting, just excited and happy to get the chance to play," DeSanto modestly reveals. Wreaking with confidence about the clash with the Wolverines, it is clear DeSanto is a firm believer in the 1980 edition of Irish football.

"We surprised a lot of people in the Purdue game," he explained. "Sure, the kind of team we have this year can't just step out on the field and win like, say, the 1977 team. We don't have the individual talent they did, but we're a lot closer than that. When we pull together, we're just as talented and every bit as good as any national championship squad."

The psychology major echoes the positive feelings expressed by many of his teammates concerning the sense of unity this season. "It's going to take a lot of
