ND Placement Bureau

Stanelle discusses job interviewing

By DAN MCCULLOUGH
Staff Reporter

"How to market yourself for a job in a tight economy or how to get the job when no one really wants you.

Stanelle gave the predominantly female group some tips on preparing a resume, writing the cover letter, and getting ready for the interview at the lecture which was sponsored by the Notre Dame Placement Bureau. He told the group that the future of the job market is unclear, but will most likely respond to the cyclical changes in the economy.

The graduate who has decided to enter the job market must first rank the type of job he is looking for against the amount of money paid, the location of the job, and other personal factors before entering the market. While the best paying jobs tend to be in the big cities, Stanelle said that it is better to choose a job in the area in which he desires to live, rather than take a particular job in a city in which he does not wish to settle.

Stanelle advised potential job seekers to move in their desired area for at least three months, and take any job in order to continue paying the rent while continuing to look for the desired job. "It is not as frightening as you think a job interview will be when you know where your next meal is coming from," Stanelle added.

After determining if the position desired is achievable, the hospital graduate must go "knocking on doors." The more jobs one has in one's line of work, the better is the percentage of finding one that there was no difference between students starting with a large company as opposed to a smaller one, one of the facts that the large companies encourage specialization, while smaller companies offer more general positions.

Concerning attitude, Stanelle offered these "costs of failure versus the costs of success." Many job seekers should look at the costs of not interviewing for the benefits of the desired position, when the rejection of the job market goes through.

Written skills are more important than oral skills with employers, since applicants with sloppy resumes probably will not even receive an interview, Stanelle went on to say. He told the group that their resumes should be updated and accurate, emphasizing neatness. Objectives should be clearly stated, while at the same time reflecting realism. Sagacity should permeate the resume since "you are selling yourself, and there is no one else who is going to do it for you."

A cover letter should accompany the resume immediately, and be solicited for every separate company one applies to. In the "biggest pain in the world," the applicant should make a statement about every company even if it means a few nights at the local library doing a little research, he said. The applicant should let potential employers know that he is familiar with their company, and will be a valuable asset if given the chance, he elaborated.

Stanelle's first bit of advice concerning the interview was to stick with the office beforehand and notice the attitude of the office employees. When preparing for the interview, dress accordingly, he said. This will give the candidate an advantage to the applicant since he will seem to fit in. Do your homework on the company, be prepared to tell them what you know about them, and be early, Stanelle stressed.

Most important of all, he said, when answering questions be sure to make your "puzzles pieces" and your "mosaic pieces." Stanelle speaking as a professional interviewer, said that the questions are designed to elicit information upon initial impression, education, job experience, former activities and interests, and finally, maturity and judgement.

Looking into the future, Stanelle stated that the job market is still bright for engineering and business majors, but that the arts and letters graduates will surpass the others in position and income because of their ability to be more well-rounded, and therefore more able to handle real world situations.

The lecture ended the last day of the Placement Bureau's recruiting drive for this semester.

River City cancels another concert trip

By DAVID DZIEDZIC
Executive News Editor

For the second time in two months, River City has canceled a trip to a Chicago rock concert within two days of the event.

Peter J. Kernan, proprietor of the south Bend record store, blamed the trip's cancellation on "a rash of cancellations by people who had committed to the trip over the past 10 days." The concert is set for tomorrow night at the Rosemont Horizon.

Kernan admits that he does not have tickets for tomorrow night's show, but claims that recent cancellations are not due to lack of tickets. He blames the upcoming satellite presentation at Stempan Center of the West's concert for dampening interest in tomorrow night's show.

The concert tickets are still available to me through Chicago ticke ters, Kernan said yesterday. "I had sold out 100 tickets per popular Wednesday's show and had reserved three buses from Indiana Monorail. But every student of Notre Dame Student Union who announced their Dec. 1st satellite show had about 75 tickets available.

Kernan said that he only has 15 people left who are interested. It would not be financially feasible for him to continue the trip.

A former employee of River City Records, however, said that the trip was a "sham from the word go. Kernan never had tickets for this concert, just as he never had tickets for the October concerts." The Observer also has learned that the trip was not as advertised.

The Board of Trustees has decided that the trip will be postponed until further notice.

The tickets, according to Kernan, could be sold for at least 500 a piece.

The Dec. 1st concert will be shown at Stempan Center. The group, which is formed by new all college concert proposed by the newly formed college concert committee, is formed by new all college concert committee, is formed by new all college concert committee, is formed by new all college concert committee, is formed by new all college concert committee, is formed by new all college concert committee, is formed by new all college concert committee, is formed by new all college concert committee, is formed by new all college concert committee, is formed by new all college concert committee...
Two Saint Mary’s students were struck by a St. Joseph County Police car early Sunday morning. The two students, Linda Brown and Liza Lafferty, were crossing U.S. 31 at 3:55 a.m. when the incident took place. The group had been engaged in a dormitory security routine at Saint Mary’s Security to obtain a ride to the dorm. As the students were crossing at the stop light at the corner of U.S. 31 and Saint Mary’s Avenue, they were struck by the police car driven by officer Jim Vance. Vance was responding to a police call in Roseland. After the accident, he noticed a car with unlit lights stop­ping in the right lane. He over­rode to avoid the car, applied his brakes hard, and the two students, according to an incident report released by the Saint Mary’s Public Relations office, were taken to St. Mary’s Hospital and St. Joseph Medical Hospital where they were treated and released. The accident is under investigation by the St. Joseph County Police.

The Notre Dame College Bowl championship was won by the team composed of Mike Krusz (captain), Ray Davis, Ann Reel, and Larry Kennedy. Krusz’s team won 1-1-1 against one of the All-American teams and 0-0-0 against the other All-American teams. The final scores were 210-100 and 205-150. Krusz’s team goes on to compete against an all-star team composed of members of the remaining 15 teams. From those eight players, Dr. Peter Lombardo, tournament director and conference coordinator of the CCF, will select four to represent Notre Dame in a regional Bowl tournament.

The Notre Dame College Credit Union is installing an automatic teller machine in the bus shelter at the Notre Dame Main Entrance. The shelter is currently undergoing con­struction to make room for the machine. The automatic teller machine (ATM) is one of four such machines in the area that have to be in operation by Jan. 1. Operating under the trade name “The Exchange,” the ATM is the result of the Credit Union’s affiliation with Automatic Data Processing, a national banking network endorsed by credit unions in 30 states. — The Observer

Father JohnEGAN special assistant to the president and director of Student Alumni Relations for Presidential and Law School, has been named recipient of the Emily M. Schonberger Award. The award, given annually by the Notre Dame Press to a member of the Notre Dame community contributing outstanding contributions to the cause of scholarly publishing, was presented to Egan during a recep­tion held in his honor.

A federal appeals court yesterday upheld the nation’s toughest gun ordinance, ruling that the Chicago suburb of Morton Grove activated within its authority when it banned the sale and possession of handguns. In a 2-1 decision, the 7th U.S. Circuit Court of Appeals rejected arguments that the ordinance, the first of its kind in the nation, violates provision of the state and federal constitutions that guarantee a right to bear arms. No one has been charged with violating the ordinance since it took effect last Feb. 1. Justice William J. Bauer, who wrote an 18-page majority decision, agreed with U.S. District Judge John C. Friendly, who ruled that the village activated within the police powers granted by the state constitution in outlawing sale and possession of handguns in the absence of laws to enforce confiscation of firearms and registered gun collectors — AP

Sen. Edward M. Kennedy and his estranged wife, Joan, filed for divorce yesterday, agreeing to share custody of their children, Patrick, 15 years old, and who attends school near Boston, where I will maintain the primary residence,” Mrs. Kennedy said in a statement. “Under the terms of our agreement, we will receive all payments of alimony and child support as well as half any cash settlements and half of our family’s interest in any tangible personal property,” the statement said. “I will retain ownership of the family’s residence in Hyannisport.” — AP

Partly cloudy today, with light snow or flurries developing this afternoon. High in the mid 30s. Continued cloudy tomorrow, with highs in the low 30s. — AP

Plastic hearts and souls

Last week’s successful attempts to make an artificial heart with a man marks a new frontier for science and raises many social, medical, and theological questions.

The operation made all the more dramatic because it involves the heart itself. “Get the heart of the mat­ther.” “He has a soft heart.” “She’s heartless.” The word heart means much more than a blood pumping organ. It also symbolizes emotional support as well as a lump sum cash settlement and half of our family’s interest in any tangible personal property,” the statement said. “I will retain ownership of the family’s residence in Hyannisport.” — AP

Taylor Lewis and the divorce will become final in a year, ending a 24-year marriage that they said occurred “an infrequent break-up.” Under the agreement, he would like to get a part-time job. Mrs. Kennedy said in a statement released yesterday by her New York attorneys. “Under the terms of our agreement, we will receive all payments of alimony and child support as well as half any cash settlements and half of our family’s interest in any tangible personal property,” the statement said. “I will retain ownership of the family’s residence in Hyannisport.” — AP

Dr. Barbara Clark wondered if her hus­band’s opinion would have changed the operation. Happily, the day after the surgery, she tured but cheerful husband assured her she still did.

Real, she was not worrying about — the heart is no more than a muscle. But what a muscle. Not much larger than a fist, it pumps 2.2 liters (that’s a little under 2 gallons for you non metric types) and it new­stops. When it finally does, it’s too late.

Clark was the victim of a degermating heart disease. By early last week, her heart could only close about one seventh the normal amount of blood through his system. Had it not been for the artificial heart, the six feet four inch father of two now would be dead.

For life for Dr. Clark in the future, however, is not going to be a bed of roses. The polyurethane polymer (no word if they used old French tomato suits to make it) requires a three-foot-long pump unit. How long Clark’s body will tolerate a hunk of plastic remains to be seen.

The doctors, as doctors, will be interested in the in­teresting problem about the whole thing. They claim that sooner or later, doctors will have the heart and soul to face the degermation. As is so often the case when you put your hands on the heart, there are no guarantees that anything will work. As is also typic­al for the medical profession, before Barbara could have his operation he had to sign 11 forms of insurance.

The hiper aside, the doctors privately admit that it will bring back heart rates for more than a few months. But after 16 years and 200 million dollars of research, the Jarvik-7 can be called a success. More im­portantly, it will soon be followed by a Jarvik-8 and other “new and improved” models. Already, the doc­tors are researching the possibility of developing a artificial heart that is still intact. Once the huge support unit is gone, recipients will find it easier to participate in the activities doctors say they can. When the artificial heart becomes this compact, it is thought that between 10 to 20,000 a year will be implanted. The cost won’t be cheap, but as one insurance executive put it, “It will be cheaper to get an artificial heart than to spend several years dying of heart disease.” And we thought the benefits of the device were purely humanitarian.

In addition to his new heart, and related par­aglaucoma, Barbara also has received a rather special key. It is the key to the heart’s around the block.

Unlike normal hearts which quit after a lifetime of alcohol, spicy foods, procrastinated exercise, and even broken romances, the Jarvik-7 keeps on ticking until someone turns off the power. Doctors realized that Bar­ney should have some control over his own destiny. Hence the key. There is no word if the key to keep on the chain with the keys to the Honda or in his nightstand.

In a few years, doctors expect to have replacements for most parts of the human body. Should you need a new organ, one will be readily available — if your Blue Cross is paid up. “Excuse me sir, I’d like a new liver please.”

The question then is, when does one stop being human and become machine? When your replacement is not a factor of your health, but of your ability to pay the utility com­panies. Then, when you choose to die.

These are questions we will be facing in the future. As technology continues to expand, the dreams of today will become the realities of tomorrow. In 30 years, most of us will be in the prime of our physical degeneration, despite all efforts at rejuvenating around the clock. Will the new ones be the ones able to afford life-giving devices? Will artificial organs become a means where the un­answerable elements are further weeded out of society by the status quo.

Even trickier is the issue of the artificial brain. The most advanced computers have a rudimentary intelli­gence, and research in this area is booming. In the next century, a person faced with a degenerated body may forgo the piecemeal approach to body replacement, and opt for a new body and form. But not does this body ill for undertakers but it poses a problem for theologians. When a person’s artificial heart can be placed within a machine, where is that person’s soul? That entity that has been taught makes us different from the animals (except maybe for a feline) — where does it fit into something that looks like a human, and thinks like a man, but runs by batteries?

Let us hope we have the heart and soul to face the moral and ethical questions to which the Jarvik-7 has opened the door.

Inside Tuesday
A Social Concerns Seminar, sponsored by Notre Dame's Center for Social Concerns, will take place this year in Washington D.C. over spring break, March 12-19. Thirteen Notre Dame students attended the seminar last year, discussing such issues as disarmament, the budget, and the situation in Central America.

Mary Jimenez, a senior who attended last year's seminar, said, "The purpose (of the seminar) is to acquaint people with issues being dealt with by our government. Each person is encouraged to go talk to their congressmen and state their concerns." Ceci Serna, who also participated in last year's conference, said "anyone who is interested in national and international issues would be perfect for this trip." "Most representatives," said Jimenez, "were very open to their constituents' views; kind of words you up. You realize your responsibility as a citizen, and that there is a way to make your will known and it is your responsibility to make your will known.

"I wanted to know what Washington politics was like," continued Jimenez. "I was really intrigued by the whole process. I knew about it theoretically, through books but this offered an opportunity to experience it first-hand. I wanted to see what pressures congressmen were under — to see what kind of lives they live." According to Marcia LeMay, campus coordinator for the seminar, students who go to Washington will have the opportunity to listen to and discuss concerns of social justice continued from page 1

Mainwaring said that previous to the coup, the Church maintained a fairly conservative attitude in Brazil. Although it provided services for the poor, the Church worked closely with wealthy land owners, who encouraged the Church's neutral stance in the conflict between the state and the masses, he said.

After the coup, however, a more radical temperament was adopted, explained Mainwaring. By 1972, all the bishops in Brazil had issued statements denouncing state-organized activities such as "white slavery," and the lack of adequate sanitation. As a result of this new radical attitude, several priests and bishops were brought to trial on charges of subversive activities, imprisoned and tortured. Destruction of Church property by the coup also was common.

Violence against the Church served to unite it. Even the most conservative members of the Church organization, the Bishops' activities, making the Church of Brazil one of the most progressive in the world.

Mainwaring also said that, although the progressives are still in the minority, they are becoming dynamic. This fact recently helped to bring about legislation for urban and agrarian reform, which recognizes the rights of peasants in land ownership.

NEED HELP WITH YOUR STUDENT LOAN?

If you've attended college on a Guaranteed Student Loan (or a National Direct Student Loan made after October 1, 1997), consider spending a couple of years in the Army.

If you train for certain specialties, the government will release you from 1/3 of your student debt (or $1500, whatever is greater) for each year of active duty.

Otherwise, a three year enlistment cancels 100% of your debt, but if you sign up for two years, you'll have to pay 2/3 of your debt for the second year. Clearly, the exclusive two year enlistment option, we'll still cancel 2/3 of your debt.

Plus, you may be eligible for generous education incentives.

To find out how to serve your country and get out of debt, call the number below.

ARMY. BE ALL YOU CAN BE. Stg. Hamilton 254-4107
**Economic Update**

Robert D. Orr, Indiana's GOP governor, laid out his plan Monday for higher sales and income taxes and hinted he would accept changes aimed at easing the tax burden on needy Hoosiers. "Today is a day of opportunity for all of us," Orr told a joint session of the Indiana House and Senate. "Let us put aside the partisanship that may weaken the opportunity for a financially healthy Indiana."

Opening the first day of the tax-raising special session, Orr endorsed a plan to raise the state income tax from 3.0 to 3.5 percent and to boost the sales tax from 4 percent to 5 percent. Referring to the recommended income tax increase, Orr said, "I believe careful consideration should be given to lessening the impact this increase will have on low-income families." — AP

**Research Update**

"Bio-bricks" are getting a snappy reputation, says civil engineer James E. Allman. They are a cheap, effective new construction material that is getting a bum rap because of its humble origins. Allman, a professor at Purdue University, says he has to put up with misunderstandings and a lot of crude jokes in his quest to accept changes aimed at easing the tax burden on needy Hoosiers.

"Such was the humble beginning of Swift Air Corporation, an air charter service headed by N.D. senior Robert Milhäuser. Immediately an airliner service, Swift Air was incorporated more than one year ago by Milhäuser and a local businessman. Swift Air's first pilot in experience Milhäuser had been flying four and a half years before undertaking his venture with Swift Air. Included in time spent commanding one of the Channel 16 Vertigams. At the beginning, "he recalls, "we had a single plane and I did all the flying myself."

Based at Machias Regional Airport, Swift Air next expanded to an air charter or passenger taxi service. Milhäuser explains, "We do such things as directly transport executives of local firms to business meetings or make emergency flights arising out of unusual circumstances." He adds, "For example, the Southern Square out of South Bend after his performance at the N.C.C. to sign for his new show."

Persistently consisting of four pilots and three planes, Swift Air recently averaged 20 hours and 50 minutes, which was beginning weekend non-stop service to Chicago's Midway Airport on Dec. 9. All its flights to Midway will then continue to downtown Chicago's Megra airport. The flight will terminate at Megra and the return flight will originate there at the same day. The flights will be offered every Monday, Tuesday, Thursday, and Friday, departing South Bend for Midway at 8:15 a.m. and leaving Megra for the return trip at 4:00 p.m. (all times local).

Milhäuser returns that Swift Air's expanded service will benefit students traveling to or from Midway Airports and its budget fares. Previously, there was neither scheduled air nor limited service to Midway Airport.

Milhäuser contends that Swift fares to Midway and Megra are comparable to commercial airline travel to or from O'Hare. Fares and reservations may be obtained by calling Swift Airlines.

**Wall Street Update**

The Dow Jones average of 40 industrials jumped 25.20 yesterday to 8,155.56. Advancing outpaced declines by about 5 to 2 on the New York Stock Exchange. Big board volume totaled 83.88 million shares, against 71.54 million in the previous session.

**Computer graphics equipment updated**

By MARY EASTERDAY

News Staff

Engineering students at the University of Notre Dame will soon be able to "see" inside their designs of buildings and automobiles. The College of Engineering is to receive updated its computer graphics equipment after a General Motors Corporation grant of $250,000.

The development of a computer graphics facility is part of a comprehensive goal to modernize the university's engineering computer capabilities. A committee of faculty members is responsible for purchasing and making the long-range plans for this equipment. Among the specific aims is the updating of designs courses with the use of computer graphics applications that have helped advance industrial and manufacturing trends. The new graphics equipment is not related to the Apple computer equipment that is being acquired from the World's Fair.

The new facility will allow the Computer-Aided Design/Computer-Aided Manufacturing (CAD/CAM) application of computer graphics to be integrated into required courses, offering students hands-on experience with the equipment. General Motors was the pioneering company in first using the CAD/CAM design. They are the leaders in the development of the technologies and software of this facility. The best examples of the use of the CAD/CAM application design trends are seen in General Motor's car designs.

Dr. Roger A. Schmitt, Dean of the College of Engineering, explained that in addition to increasing the speed, ease and accuracy of design work, CAD/CAM allows students to see a three-dimensional view of the object they are designing.

"With this application, students will be able to see a three-dimensional, geometric view of what they are designing. In moving a lever or pushing buttons, the design will rotate to show them all of the possible views. If they are designing a building, this application will allow them to go inside and see all of the angles."

In the past, Schmitt said, such comprehensive views of designs could not possibly be taken on be cause of the time involved and the limitations of paper and pencil drawings. The ability for mechanical and civil engineering students will help the frequent users, but added that "the equipment is not restricted to any one department or every engineering department may make good use of these designs at different times."

When completed, the facility will resemble a laboratory setting with graphic terminals linked to a mainframe computer. The facility will be housed in a classroom or laboratory in Fitzpatrick Hall of Engineering, and is hoped to be in use by next fall.

**Student directs Local airline expands service**

By ALEX SZILVAS 850 Editor

Transporting live lobsters between Boston and Chicago may seem like an interesting diversion from the rigors of academic life as a Notre Dame student.

"Such was the humble beginning of Swift Air Corporation, an air charter service headed by N.D. senior Robert Milhäuser. Immediately an airliner service, Swift Air was incorporated more than one year ago by Milhäuser and a local businessman. Swift Air's first pilot in experience Milhäuser had been flying four and a half years before undertaking his venture with Swift Air. Included in time spent commanding one of the Channel 16 Vertigams. At the beginning, "he recalls, "we had a single plane and I did all the flying myself."

Based at Machias Regional Airport, Swift Air next expanded to an air charter or passenger taxi service. Milhäuser explains, "We do such things as directly transport executives of local firms to business meetings or make emergency flights arising out of unusual circumstances." He adds, "For example, the Southern Square out of South Bend after his performance at the N.C.C. to sign for his new show."

Persistently consisting of four pilots and three planes, Swift Air recently averaged 20 hours and 50 minutes, which was beginning weekend non-stop service to Chicago's Midway Airport on Dec. 9. All its flights to Midway will then continue to downtown Chicago's Megra airport. The flight will terminate at Megra and the return flight will originate there at the same day. The flights will be offered every Monday, Tuesday, Thursday, and Friday, departing South Bend for Midway at 8:15 a.m. and leaving Megra for the return trip at 4:00 p.m. (all times local).

Milhäuser returns that Swift Air's expanded service will benefit students traveling to or from Midway Airports and its budget fares. Previously, there was neither scheduled air nor limited service to Midway Airport.

Engineering students at the University of Notre Dame will soon be able to "see" inside their designs of buildings and automobiles. The College of Engineering is to receive updated its computer graphics equipment after a General Motors Corporation grant of $250,000.

The development of a computer graphics facility is part of a comprehensive goal to modernize the university's engineering computer capabilities. A committee of faculty members is responsible for purchasing and making the long-range plans for this equipment. Among the specific aims is the updating of designs courses with the use of computer graphics applications that have helped advance industrial and manufacturing trends. The new graphics equipment is not related to the Apple computer equipment that is being acquired from the World's Fair.

The new facility will allow the Computer-Aided Design/Computer-Aided Manufacturing (CAD/CAM) application of computer graphics to be integrated into required courses, offering students hands-on experience with the equipment. General Motors was the pioneering company in first using the CAD/CAM design. They are the leaders in the development of the technologies and software of this facility. The best examples of the use of the CAD/CAM application design trends are seen in General Motor's car designs.

Dr. Roger A. Schmitt, Dean of the College of Engineering, explained that in addition to increasing the speed, ease and accuracy of design work, CAD/CAM allows students to see a three-dimensional view of the object they are designing.

"With this application, students will be able to see a three-dimensional, geometric view of what they are designing. In moving a lever or pushing buttons, the design will rotate to show them all of the possible views. If they are designing a building, this application will allow them to go inside and see all of the angles."

In the past, Schmitt said, such comprehensive views of designs could not possibly be taken on because of the time involved and the limitations of paper and pencil drawings. The ability for mechanical and civil engineering students will help the frequent users, but added that "the equipment is not restricted to any one department or every engineering department may make good use of these designs at different times."

When completed, the facility will resemble a laboratory setting with graphic terminals linked to a mainframe computer. The facility will be housed in a classroom or laboratory in Fitzpatrick Hall of Engineering, and is hoped to be in use by next fall.
The Perfect Student Newspaper

We at The Observer are perfect. We have, over the course of our 16 years as an independent student newspaper, attained such a level of competence and judgment that no suggestion, criticism, compliment or complaint could help us improve our already-perfect status as America's number one student newspaper. Does that seem strange? Conceited? Completely false? Could be. We wouldn't know.

Those of us who work for the newspaper are proud of the job we do. We stand in a unique position as a completely independent college newspaper, publishing daily without the guidance of any department or faculty advisor. Nonetheless, we realize, in our more modest moments, that we are not perfect.

As Margaret Fosmoe so aptly noted in her Inside Column, "in many instances, more prominence is given to the situation than it allows an understanding of the roles of journalist and student conflict, making controversial decisions and self-evaluation even more difficult."

So it is.

To gain further insight to some ways we could improve our performance as the voice of the community, The Observer scheduled a "general reader forum" at 6:30 last night in the Library Auditorium. The meeting was widely publicized through the personals column, display advertising, an editorial last Friday, and posters plastered all over both campus — not to mention Ms. Fosmoe's article yesterday.

The appointed hour found a dozen of The Observer's editors and managers facing a throng of 12 people. All 12 were Observer employees.

Giving the expected speakers the standard University allotment of 15 minutes before cancelling the affair, the Observers waited politely — and a little hopefully.

But it was not to be. Perhaps it was the press of imminent exams, the airing of A Charlie Brown Christmas — perhaps all of Notre Dame and Saint Mary's had to wash their hair last night. Whatever the reason, only readers dismissed as empty seats attended.

This apparent vote of confidence does wonders for our ego.

Readers will continue to see the same paper, with which, apparently, they find no fault. We will continue to accept letters to the editor(s), but of course there won't be any complaints.

We're perfect.

A Day that will live in infamy

Forty-one years ago, Japan launched a surprise attack against the American naval and army installations in the Hawaiian Islands. In less than an hour, the American Pacific Fleet, with the exception of the aircraft carrier task force, was obliterated. The next day, both

Paul McGinn
Koper Review

houses of Congress declared war on the Japanese empire, and World War II officially became a part of American history. "Moralists" have attempted to dim the horror and inexcusability of that attack by rebutting with the American tragedies of Nagasaki, Hiroshima, and Japanese-American concentration camps. But the sad fact of the attack which the enemy was regarded as the blatant aggressor. The War of 1812, the Mexican War, World War II presented a hazy concept of right and wrong, oppression and oppressed. World War II presaged a well-defined portfolio of good and evil, the Axis and the Allies.

And America white.

Many current World War II historians who think the best of intentions. It hoped to forever erase the stain of totalitarian government, and to its credit, America won the Axis threat. But the war and while America may have had to compromise with the Soviet Union and other oppressive regimes, Hitler and Tojo were silenced.

No one can determine if the war was indeed a just cause or whether the Axis could ever be defeated. But the very fact that America entered the war did much to prevent the kind of tragedy that befell the Axis and its allies. The war of 1914 to 1918 was not America's war. Nation, religious, and business were all greatly affected.

Americans of all ages, faiths and cultures first into a war. Loved ones plastered all over both campus — not to mention Ms. Fosmoe's article yesterday.

Therefore, if the administration were ever few, why shouldn't they also pay for the trouble we cause? And that's my 1 cents worth.

Brian Greenfield

Dear Editor:

I am writing in regard to the administration's charge that the N.D. student should be responsible for any damages caused by the "Tranpo buses after the Pitt game. In the light of recent events in the administration of this university, Father Van Wover and Co. seem to be taking a hypocritical stand on this issue. They encourage us to take responsibility for our actions in this case, yet fail to allow us to be responsible for other aspects of our lives. Does the inconsistency in university policy and attitude.

Father Van Wover wishes that the students "can learn to control themselves and their actions." I feel that perhaps our defense will not be as strong if attacked as the draft, constitutes slavery. For this reason, he opposes the recent conscription of federal aid to students who refuse to register for the draft. Furthermore, Mr. Wover encourages Notre Dame students to protest on their own behalf.

I must disagree with Mr. Wover's advice on several points. First, draft registration is a legal obligation. All citizens then they should work to change it, rather than encouraging Notre Dame to help students. Mr. W. Mine. Mr. Wover is encouraging students to judge the draft law for themselves, and to ignore it if they decide it is immoral. Does Mr. Wover really believe that each person should decide for himself which laws to obey and which to ignore? I think not.

Second, perhaps everyone who enjoys the benefits of this country must in its responsibilities also. A student cannot ignore his responsibility for helping to protect the country and respect the government.

Debra M. Fosmoe

Dear Editor:

I must reply to Michael Wether's letter that appeared in the November 19th Observer, which concerned the draft registration issue. Mr. Wether stated that any official who opposed the draft registration law wouldn't register law.

I hope this letter finds those who care to write to the Observer.

The Observer
Box Q, Notre Dame, IN 46556
The Observer is the independent student newspaper published by the students of the University of Notre Dame La Due and Saint Mary's College. It does not necessarily reflect the policies of the administration of either institution. The news is reported as accurately as possible, but the opinions of the Editorial Board, the columns, and the letters are those of the individual writers. The newspaper is the official organ of the majority of the Editorial Board. Commentaries, letters, and the Inside Column depict the views of its authors. Column space is available to all members of the community, and the free expression of varying opinions on campus, through letters, is encouraged.

CORREC VOLLEYBALL

S.P. Jones, coach of the women's volleyball team, remarked by Ann O'Brien, directed the first game of the tri-series. "We didn't do too well; our team just didn't do too well," said coach. Women's volleyball by coach S.P. Jones, is at the top of the list. "We've been working on our serve and return," noted coach. "We've been working hard to get our serve back."

The Observer

...Rumors

One report says that George Al-

den who didn't coach the I.A. Rams,

then didn't coach the Maconter Al-

montes, and still has not coached The

Chicago Blaze, says he'll take the

job, but only until the season starts.

Chris Needles, the Sports Editor of

The Observer, says he's always want-

ing to be a coach, and he thought

about taking the job, as long as he

could stay at the newspaper and

write good things about himself.

Finally, former coach Dan Devine,

now head coach of the University of

Miami, had been offered jobs at

Texas and Michigan. But he says he

hasn't been offered a job elsewhere.

But he's available, and interested, and

experienced, and can hustle the Fight

Sax.

But these are just rumors and you

shouldn't believe anything you hear.

Can you?

Paxson questionable
Irish complete Crown face IU

By CHRIS NEEDLES
Sports Editor

Traditionally, the third jewel of home racing’s Triple Crown—the
widespread and bedeviling Stakes—is the

noisiest and most galling of

the three.

Tonight at the ACC, Notre Dame
completes its version of the Triple
Crowns by playing host to Bobby
Knight’s Indiana Hoosiers. Tipoff is
8 p.m. (Channel 16, ESPN).

The sixth ranked Hoosiers may
have the greatest depth and

know what’s coming.

Indianapolis, leads the scoring
race with 10 points per game and is
shooting 61 percent from the
basket.

The Irish, on the other hand,
are not certain of what’s coming or who

is making the move.

"We have some open slots," says
Mark Paxson, who is averaging 17
points per game.

Coach Dennis Stark, who begins
his 24th season as the Irish mentor
returns after the losing of the
last year’s A-10 team. However, Notre
Dame must contend with the losses of
rivals Mike Shepardson, John
Williams and, co-captains Don
Casey and John Gibbons.

Sheppardson, who won eight
seasons in the 50-yard freestyle (.24.1)
and the 100 butterfly (50.9), Williams and
the team mark in both the 100-yard
breaststroke (1:02.3) and the
200-yard breaststroke (2:16.1). Casey,
who had led the top position in the
butterfly for four years, while Gibbons
was a valuable swimmer in a variety of
events.

"We have some slots open due to
graduation, but we also have the
people to fill them," says Stark.

"Some of the new people have good
times, but they don’t have collegiate
experience, so we’ll just have to wait
and see." Top returns for the Irish
include senior co-captains Greg
Bobby, who is in his 12th year at the Blooming

Tom, who has averaged
16 points a game so far,

bobby’s not a complicated
couch," says Phelps of Knight,
who has won two NCAA championship
ships, an NIT title and six Big Ten
crowns in his 12 years. "He just
doesn’t have big results because he
does the impossible. He’s Indiana’s
greatest basketball coach. It’s a
tough job to fill the shoes of the
legendary Knight, and the Hoosiers
will try to do it in the next three
seasons under the tutelage of
Skip Desjordain.

The Irish once again will go with a
starting five that includes three
freshmen—forward Tim Kempton,
center Ken Barlow and guard Joseph
Price. Kempton, who began his
senior season on Saturday, scoring
17 points by consistently taking the ball
low for power lift.

"With Kempton, we’ve got to be more
consistent," says Digger Phelps.

"That’s a dimension that
Paxson has yet to provide this
season."

The freshmen are not the only new
faces in the ACC this year. Two
major arms build-up to turn the Notre
Dame basketball fortunes around
Kempton (corb watchers say that
Bobby Knight was recruited by
the greatest basketball coach."

The rumors began before the season was over. But the
two have finally met at Notre Dame. "We’ve been
playing games because of good defensive
play," says the coach.

"The key to this is that all American guard John
Paxson, who is averaging 17
points per game, known
as a key man, is shooting 61 percent from the
basket.

The Irish offense has come from the back-
boarding of Knight, who has been
working with the freshmen.

"We have some open slots," says
Mark Paxson, who is averaging 17
points per game.
