99 MAIN STREET, South Bend, Indiana.
MEALS AT ALL HOURS!
Fruits, Nuts, Confectionery, and Choice Cigars,
ALWAYS ON HAND!
FRESH Candies Made Daily.
Bismarck Loquitur.

BY J. M. J. G.

I. "I am lord of the Reichstag and Kaiser; My order is Europe's sole law; I am king of the Rhine and the Weser, And Elsass lies under my paw; I laugh, and my Teutonic laugh with me,— When the Kaiser says grandly, "My realm," I—am the Kaiser, believe me, And not the old dotard, Wilhelm I.

II. "The Austrians' pride I have battered— I have shaken the Hapsburg line; The glory of France I have shattered On the banks of the bloody Rhine, I have pounded the Danes out of Holstein, In spite of the Englander's frown. With their Dukes and their Duchess Gerolstein, And their pinchback and tinsel crown!

III. "The ice-fields of Russia are gleaming— With acres of Tartaric steel, And the god of the Arctic is dreaming That Turkey is under his heel, Let him polish his uncouth battalions, And cast his colossal war guns; What care I for masses en haillons Of barbarous Cossacks and Huns!

IV. "If he won't be my slave I shall strike him, As I mean to strike England soon, So vote me the money, slave Reichstag, For your freedom to vote is my boon. But, before the red flag of George lowers, The Lion of Flanders must die, And Artaudel's land with its boors Must unfurl Prussia's banner on high.

V. "I found our poor Germans barbarians, I'll leave them quite civilized, In religion wise nothingarians,— Faith donor and blistered! The Pope shall succomb to my mandate, Money can buy his Dutch friends, Ho! ho!—every kingdom and state, Shall serve mine—Prince Bismarck's—ends!

Prester John.

In the beginning of the eleventh century there was a great sensation caused throughout all Christendom by the conversion of a prince, known as Priest, or Prester John. The fame and renown of this mighty prince continued to increase through the twelfth and thirteenth centuries, for he seems not to have been subject to the laws of mortality. It was acknowledged by all that this mighty prince surpassed all other sovereigns in riches and possessions. But where to place his kingdom? There is where they differed. Some place it in Ethiopla; others claim that he held sway in Asia—in India, Tartary, or Thibet. Many dissertations were written by the learned men of those times, and fables and contradictions innumerable were circulated, concerning the country, title, and religion of this mysterious monarch. Every traveller, say, every writer of the time, speaks of Prester John, and relates the most wonderful things concerning him.

But all of these tales are surpassed in extravagance by the letter written by Prester John himself to the Emperor of Constantinople. As regards the authenticity of this letter, critics are divided. L'Abbe Hue, in his History of Christianity in China, Tartary and Thibet, gives it entire. It contains a most extravagant account of the power of this pontiff-king; but it does not give any exact indications of the situation of his empire. The following extracts give a good idea of the general tenor of the letter:

"Do you desire to know the grandeur and excellence of our dynasty, the extent of our power and dominion? Know and believe that I am Priest John, the servant of God, and that I surpass in riches, in power, and in virtue, all the kings of the earth.——We believe that we have no equal, either for the quantity of our riches, or the number of our subjects.——Our empire extends on one side four months' journey, on the other no one can know how great it is. If you can count the sands of the sea, and the stars of the heavens, you may number my domains and reckon my power." Missives written in like style were sent by Prester John at different times to the Emperors of Germany and Constantinople, to the Pope, and to the Kings of France and Portugal. Everyone believed firmly in the existence of this prince, and the riches and wonders of his kingdom were the theme of all. It was the Eldorado of the time.

Pope Alexander III, induced by the fame of Prester John, wrote to him in 1177, and he called him "King of the Indies, and the most holy of priests." It appears from this letter that Prester John had expressed a wish to be instructed in the doctrines of the Church of Rome; and also that he and his subjects did not profess a very orthodox creed. Indeed all the historians of the time agree that Prester John and his subjects were tainted with the Nestorian heresy. In 1143, the Bishop of Gabala, the legate of the church of Armenia, writing to Pope Eugene III, said: "Some years ago a prince named John, who dwelt beyond Persia and Armenia, at the extremity of the East, professing with his people Nestorianism, and uniting in
himself the characters of sovereign and priest, and came and waged war against Media and Persia, and having seized upon Ecbatana, cut the armies of his enemies to pieces. Jacques de Vitry, Matthew Paris, and many others, state that Prester John and his people were Nestorians. From these and many other documents we may infer that Prester John was a real personage, who dwelt in Upper Asia, and, with his people, professed Nestorianism.

In the first year of the eleventh century, a Tartar prince received baptism with two hundred thousand of his subjects. This fact is recorded both by Mares, and Aboulfarages. The circumstances according to Mares were as follows. There dwelt, at that time, at the northwest of the Great Wall of Chinn, beyond the Desert of Gobi, a tribe of Tartars, called Keraites. The sovereign of these hordes, while hunting the yellow sheep and wild yaks among steep mountains covered with snow, lost his way. After he had sought for a long time in vain to regain the right track, there suddenly appeared to him a mysterious personage, who said, "If thou wilt believe in Jesus Christ, I will rescue thee from this peril, and show thee thy way." The king, struck by this apparition, promised. Thereupon the mysterious guide brought him back to the right way, and then suddenly vanished.

The king, when he returned to his camp, determined to fulfil his promise. As there were then in his country many Christian merchants from the West, he had them brought to him, and asked for information concerning the religion of Jesus Christ. Then, having studied the Christian doctrine, he was baptized, together with two hundred thousand of his subjects. Such are the facts related by Eastern historians concerning this conversion. Whatever may have been the causes, it is certain that the Nation of Keraites was converted in the first year of the eleventh century. On this, Oriental writers are unanimous. The Nestorians were the principal propagators of Christianity among the Tartar tribes, and they would not fail to publish such a remarkable conversion as that of a powerful sovereign with two hundred thousand of his subjects. Travellers added to the stories a thousand marvels of their own, and so spread them. Thus, in all probability, arose the story of Prester John and his empire, which for three centuries agitated the minds of the Christian world. The Keraites whose kingdom was overthrown by the Monguls, under Dshingis Chan, in 1203. With this conquest of Dshingis Chan, the kingdom of Prester John ceased to exist, except in the imaginations of Europeans. Yet all the travellers from the West, during the Middle Ages, continued to search for Prester John and his Empire, and wherever they found a prince, be it in Asia or Africa, professing Christianity, they never failed to declare that they had found Prester John.

Allegri's Miserere.

On the Wednesday and Friday evenings of Holy Week the Sistine Chapel is crowded with people from all parts of the world, who are gathered there to hear that most remarkable of musical compositions—the Miserere of Allegri.

Gregorio Allegri was born at Rome, of the family of Correggio, and in 1629 was admitted into the Papal Chapel as a singer and composer. His compositions are all of a sacred character, and even to the present day many of the church services in Italy, remarkable for their simplicity and purity of harmony, bear testimony to his skill as a composer and counterpointist. He was noted for his mildness of disposition and benevolence. He visited the prisons of Rome daily, alleviating the sufferings of the prisoners by his kindness and charity. Having led an exemplary and useful life, he died in 1639, and was buried in the Chiesa Nuova, before the Chapel of San Filippo Neri.

Mozart, Haydn, and many other of the great composers, have examined the score of Allegri's Miserere, and have wondered whence it derived its great beauty. The air is simple, the harmony more so. Much of its sublimity is owing to the solemnity of the place, and to the occasion on which it is performed, as it cannot be sung elsewhere with the same effect as in the Sistine Chapel. The peculiar way of rendering the price has been kept a secret by the singers, and it is sung to this day by the choir of the Sistine Chapel as it was taught to their predecessors over two hundred years ago by Allegri himself. The score is carefully preserved, only three copies having ever been made by authority;—one of those was for the Emperor Leopold I, for his imperial chapel at Vienna.
which numbered amongst its singers some of the best of the age. He had instructed his ambassador at Rome to petition His Holiness to grant him the privilege of obtaining a copy of this celebrated work. The petition was readily granted, and the Maestro di Capella ordered to make a copy. It was transmitted to Vienna, and in due time performed before his majesty, Leopold, who, not only a good judge of music, but a good composer, found the Misere re to be nothing but a dull chant, and ordered his chapel-master to appear before him and explain. No reason could be assigned, unless it was that the Maestro di Capella at Rome, jealous of his laurels, had made a spurious copy. This so enraged his majesty that he at once sent a messenger to the Pope, entered a complaint against the Maestro di Capella, who, notwithstanding his many protestations of innocence, was immediately dismissed. He afterwards, through the friendly interposition of a Cardinal, to whom he had rehearsed his woes, regained his position in the Choir, and the Pope and his majesty were fully satisfied that only at the Sistine, and by the Sistine Choir, could the Misere re be properly rendered.

Mozart, not yet 16 years of age, went with his father one Wednesday evening to the Sistine to hear the Misere re. Knowing that it was prohibited to take a copy from the Chapel, the young Mozart listened attentively, and upon his return home made a complete score of the music. He returned to the Chapel on Friday, and by means of holding the manuscript concealed in his hat was enabled to make any necessary corrections. He afterwards was requested to sing it at a concert, accompanying himself on the harpsichord. Christoforo, the first soprano of the Sistine, was present, and, with surprise, pronounced Mozart's copy to be correct and complete.

When the Misere re commences, the Pope and Cardinals are prostrated on their knees; the "Last Judgment" of Michael Angelo is seen above the altar, brilliantly illuminated by tapers; the thirty-two voices of the Choir pour forth a volume of tone which penetrates the very soul; the movement varies, the maestro now accelerating, now retarding; the tapers are one by one extinguished; the demons painted with such terrible energy by Michael Angelo become more and more imposing as seen by the pale light of the remaining taper; the maestro insensibly beats slower and slower; the singers decrease the volume of tone to almost a whisper, and the listener is left with a lasting recollection of the Sistine Chapel and the Misere re.

Blackwood's Magazine.

In periodical literature, the Lemonnier Circulating Library of Notre Dame is now one of the richest in the West, for which Prof. Edwards is deserving of everybody's thanks. In this connection, the recent addition to the library of the complete sets of the Edinburgh Review, Blackwood's Magazine, the Atlantic Monthly, Catholic World, and, others, will render the following article from the Chicago Tribune of peculiar interest:

In 1816, magazine literature was chiefly represented in Scotland by the Edinburgh Review, then in the fourteenth year of its age, and by Scot's Magazine, which was established in 1739, and was at this time in the hands of Constable. The Tory party was at this time without a literary organ in Edinburgh, and the witty and audacious writers of the Review imposed their Whig prejudices upon the community without opposition. Both in literature and politics there was an excited and embittered state of feeling, and party lines effectually divided men who on all other subjects were of congenial minds. In December of 1816, Mr. William Blackwood, a rising bookseller lately established in Prince's street, agreed with two literary partisans, James Clogher and Thomas Horne, to purchase the property of the Edinburgh Magazine, of which they should be the editors and joint proprietors. The first number appeared the following April, under the title of the Edinburgh Monthly Magazine.

The new publication did not display any especial intellectual ability, while in politics it moved in an uncertain way between the two warring parties. Editors and publishers soon found it unpleasant and unprofitable to work together, and in June the number of the magazine notice was given that the periodical would be discontinued three months from date. The services of several clever contributors had been engaged for the monthly, among whom were James Hogg, the Ettrick Shepherd, and Mr. R. P. Gillies. On the appearance of the sixth number, according to the announcement, the partnership between Mr. Blackwood and his editors was dissolved, and the former assumed the control of the copyright.

Contrary to expectation, in October a fresh number of the magazine was forthcoming, but it was under a new name, that of Blackwood's Edinburgh Magazine, and in a totally new and extraordinary style.

Three papers in the number were especially notable. The first was a violent assault on Coleridge's Biographia Literaria; the second was a merciless attack upon Leigh Hunt; and the third was the famous "Chaldee Manuscript," with which every intelligent reader is more or less familiar. Great was the excitement over the advent of this brilliant but unscrupulous periodical. The Chaldee MS. of itself created a tremendous tumult. As a vigorous writer remarks, "A yell of despairing professionals rose from every portion of the White party, who, if they had no administrative power in their hands, had hitherto held a patent of all literary ability." Alarmed at the commotion aroused, Mr. Blackwood withdrew the offensive MS. from the second edition of the magazine, suppressed what he could in the first, and in the following number inserted an apology couched in these terms: "The editor has learnt with regret that an article in the first edition of the last number, which was intended merely as a jeu d'esprit, has been construed by some to give offense to individuals justly entitled to respect and regard; he has, on that account, withdrawn it in the second edition, and can only add that, if what has happened could have been anticipated, the article in question certainly never would have appeared."

But who were the writers whose genius and daring had provoked such serious agitation among the literary circles of Edinburgh? Mr. Blackwood maintained a discreet silence when questioned on the subject, and his contributors had no intention of disclosing their identity. But at the metropolis of Scotland there dwelt at this period two young and brilliant advocates, who were frequently to be seen together, pacing the Parliament house, or lounging carelessly into Blackwood's shop of an afternoon to examine the newspapers, and exchange the small coin of chit-chat with each other and passing acquaintances. The one was a man of splendid physique, with a shaggy mane of yellow hair falling around his ruddy face, and shading a pair of deep-blue eyes that shone with mirth and gay humor. The other was a jolly-looking gentleman, with a Spanish cast of features, an olive complexion, piercing black eyes, thin lips around which flickered a smile of sarcasm, and a cold and haughty manner. A greater contrast in outward aspect and individual character no two men could present than they did, between whom there existed a most cordial intimacy. And it was these two apparently careless idlers—John Wilson, afterwards the celebrated Christopher North, and John Gibson Lockhart, the future son-in-law and biographer of Sir Walter Scott—who were rapidly carrying Blackwood's Magazine on the points of their strong pens to the height of a splendid success.
In her "Memoir of Christopher North," Mrs. Gordon, the daughter of Wilson, states that the Chaldee Manuscript was composed at her grandmother's house, where Wilson re-ided, No. 59 Queen street, "amid shouts of laughter that made the ladies in the room above send to inquire, in wonder, what the gentlemen below were about. . . . Among those who were met together on that memorable occasion was Sir William Hamilton, who also exercised his wit in writing a verse, and was so amused by his own performance that he tumbled off his chair in a fit of laughter." Prof. Ferrier, a son-in-law of Wilson, says: "The conception of the Chaldee MS. and the first thirty-seven verses of Chap. I. are to be ascribed to the Etrick Shepherd; the rest of the composition falls to be divided between Prof. Wilson and Mr. Lockhart, in proportions which cannot now be determined." This account of the origin of the MS. is directly contradicted by "an old contributor to Blackwood," who wrote a history of Maga for the Bookseller, in 1830. This writer declares, with regard to Hogg's share in the MS., that there is no foundation for his claim to the conception of the work. "The bare start was given by Wilson at one of those symposia which preceded, and perhaps suggested, the Notes. The idea was caught up with avidity by Hogg, and some half-dozen verses were suggested by him on the ensuing day; but we are, we believe, correct in affirming that no part of his Eloisa appeared in the original or any other draft of the article."

Mr. Blackwood was himself sole editor of the magazine, although it was a long time supposed that Sir North stood at the head of it as an early partner. The process of progress miscarried; Lockhart, "it engrossed a very large share of his (Blackwood's) time; and, though he scarcely ever wrote for its pages himself, (three articles, we believe, he did contribute), the general management and arrangement of it, with the very extensive literary correspondence which this involved, and the constant superintendence of the press, would have been more than enough to occupy entirely any man but one of his first-rate energies."

The first number of Blackwood appeared in London under the patronage of John Murray, whose imprint was upon it, but the Chaldee MS. alarmed the discreet bookseller, and he withdrew his protection from the hot-brained, high-spirited foreigner. Three successive London agents undertook to manage the circulation of Maga in London, but, with the sixth number, Murray again assumed control of it. It was too erratic and reckless for him to chaperon it, however, and at the seventeenth number he discarded it entirely, and the agency was given to Cadell and Davies, who found it so profitable that they gave it almost their whole attention. Cadell was scarcely less nervous over the frisky periodical than Murray had been, and to protect himself from the wrath of victims who assaulted its pages, rushed into his shop for vengeance, he kept on hand the stereotyped defense: "I know nothing of the contents of the magazine; I am merely the carrier of a certain portion of its circulation to English readers."

Meanwhile, the daring and fearless contributors to Maga continued to cut and slash friend and foe alike in their brilliant and witty papers. Scarcely a number omitted an attack upon somebody, and the blows were administered by skilful and powerful hands. Sometimes substantial blows were given back by the writhing victims: yet these availed very little in the way of redress. Early in 1825, a Mr. Douglas, of Glasgow, was so enraged at an unflattering mention of his name by Maga, that he went down to Edinburgh to castigate the editor. As Mr. Blackwood entered the shop one day, Mr. Douglas followed him, and suddenly applied the rawhide to his shoulders and threatened him. Mr. Blackwood was himself sole editor of Maga, but, in 1825, he accepted the editorship of the Quarterly Review, and the Edinburgh periodical lost one of its strongest writers. Soon after this, Mr. Maginon departed southward, and thus the two satirical spirits who had done most to make Maga a terror were no more to be feared in its pages. The bitter personal tone that had heretofore distinguished the magazine was now dropped, and it settled into staid and peaceable habits.

De Quincey first presented one of his marvellous discourses to the readers of Maga in 1826; while in 1830 the publication of Warren's "Diary of a Late Physician" was begun. This most successful fiction had gone far in establishing Mr. Blackwood's name, and this success was in turn an inspiration to Blackwood's. It had, says its author, "been offered successively to the conductors of three leading magazines in London, and rejected as 'unsuitable for their pages,' and not likely to interest the public."

Blackwood regarded his magazine with the affection that a father feels for his child, and surely there was good reason for his looking upon it with fondness and pride. He was generous in his patronage, and cordial in his relations with its contributors, acknowledging their communications with wonderful alacrity. To quote again from the "Old Contributor": "Along with the mail-coach copy of the magazine, or by an early post after its publication, came a letter to each contributor, full of shrewd hints for his future guidance, and often, not merely suggesting the subject for a future paper, but indicating with delicate hesitancy the mode in which he fancied it might be discussed with the best advantage. The 'pudding' was invariably associated with the praise. At the head or foot of the welcome missive was a cheque for your article, the amount of which was not carved and patted like a pound of butter, into exact weight, but measured by no penurious hand."

At the same time that Warren's Diary was being published, "Tom Cringle's Log," by Michael Scott, and "Sir Frizzle Pumkin's Nights at a Mess," by the Rev. W. White, were being carried along in Maga. In 1833, Wilson reviewed the first volume of Tennyson's poems, and rapped the feelings of the young poet by the ridicule with which he treated the affectation that disfigured Tennyson's maiden verse. Tennyson expended his anger in some lines to "Rusty, Crusty Christopher," which his later good sense had led him to suppress. Two years after this, the editor of Maga was stricken with a mortal illness and the management of the publication, together with Mr. Blackwood's extensive book-trade, devolved upon his sons, Robert and Alexander. Within a year or so from this event, Wilson ceased his connection with the magazine, but his place in its pages was eventually filled by his son-in-law, Prof. Aytoun. When the death of Alexander Blackwood occurred in 1845, and of his brother Robert, which followed soon after, Blackwood's fell into the hands of the third son, John, who still retains the charge of it. Since the decease of the elder Blackwood, Douglas Jerrold, John Sterling, Walter Savage Landor, and Lord Lytton, have been reckoned among its staff. It was in 1848 that the first installment of the "Caxtons" appeared in Maga, to be followed by novel after novel from the same pen. Among women writers, Mrs. Oliphant and George Eliot may be mentioned as two who.
journeyed to the far North all bear testimony to the fact that the extreme cold blunts their sensibilities and renders them incapable of reaching to a high degree of morals and intelligence. But if extreme cold is not favorable to the advancement of the human race, neither is extreme heat. A tropical climate produces vegetation in such abundance that the inhabitants can secure food with little labor, and they are never troubled with the thought of coming to want. They become careless and indolent, and it is found to be almost impossible to get their minds interested in education and general improvement. Thus it is in neither the torrid nor frigid zone that the people are found who have advanced to the highest state of civilization; but rather in the temperate zone, where men are free from the two extremes.

L. M. K.

Bayreuth.

News comes to us from Bayreuth, where the Festival Theatre of Herr Richard Wagner keeps up its legitimate business of swallowing the money of Herr Richard Wagner's friends. As at present calculated, the monster will be gorged by the spring of next year—in other words, the house will be finished, and everything ready for the performances which are to result in the artistic salvation of the world. No one can now escape the fact that he himself—he, the Richard of Richards—is that the most inspiration. Every public notice is a remarkable proof of this, and yet the house has been opened for performances, and the audience at his Festival performances shall be a real audience. Such is the influence he exerts that the audience will be there to absorb the reverent attention of the multitude.

Herr Richard, in point of fact, means to box his friends in so much as, if not more than, anything else to do with it. Travellers who have journeyed to the far North all bear testimony to the fact that the inhabitants of those countries are not so intelligent as the people of a warmer climate. The reason given for this is that the extreme cold blunts their sensibilities and renders them incapable of reaching to a high degree of morals and intelligence. But if extreme cold is not favorable to the advancement of the human race, neither is extreme heat. A tropical climate produces vegetation in such abundance that the inhabitants can secure food with little labor, and they are never troubled with the thought of coming to want. News comes to us from Bayreuth, where the Festival Theatre of Herr Richard Wagner keeps up its legitimate business of swallowing the money of Herr Richard Wagner's friends. As at present calculated, the monster will be gorged by the spring of next year—in other words, the house will be finished, and everything ready for the performances which are to result in the artistic salvation of the world. No one can now escape the fact that he himself—he, the Richard of Richards—is that the most inspiration. Every public notice is a remarkable proof of this, and yet the house has been opened for performances, and the audience at his Festival performances shall be a real audience. Such is the influence he exerts that the audience will be there to absorb the reverent attention of the multitude.

Herr Richard, in point of fact, means to box his friends in so much as, if not more than, anything else to do with it. Travellers who have journeyed to the far North all bear testimony to the fact that the inhabitants of those countries are not so intelligent as the people of a warmer climate. The reason given for this is that the extreme cold blunts their sensibilities and renders them incapable of reaching to a high degree of morals and intelligence. But if extreme cold is not favorable to the advancement of the human race, neither is extreme heat. A tropical climate produces vegetation in such abundance that the inhabitants can secure food with little labor, and they are never troubled with the thought of coming to want. They become careless and indolent, and it is found to be almost impossible to get their minds interested in education and general improvement. Thus it is in neither the torrid nor frigid zone that the people are found who have advanced to the highest state of civilization; but rather in the temperate zone, where men are free from the two extremes.

The Scholastic.
Published every Week during Term Time at NOTRE DAME UNIVERSITY.

All communications should be sent to Editor Scholastic Notre Dame, Indiana.

One year..................................................$1.00
Single copies (6 cts.) can be obtained at the Students' Office.

The Scholastic for the 2nd Session.

The subscription price of the Scholastic for the 2nd session of 6 months is fifty cents; besides which all new subscribers are requested to send ten cents for postage, making in all sixty cents.

Address: Editor of The Scholastic, Notre Dame P. O., Ind.

—It is to be hoped that every member of Congress who voted for the New Postal Law will be elected by his constituents to stay at home. Under the new law, a two-cent stamp is required in order to forward a copy of the Scholastic, or other paper, through the mail. The injustice of the law becomes apparent when we know that it was passed for the benefit of the Express Companies. They were losing too much of their traffic on account of the cheapness of postage, and the accommodation it afforded the people. The Postal Department was doing too much of what the Express Companies considered their business; hence they lobbied a bill through Congress by which they made the cost of sending by mail equal to that of transmitting by express.

It is a well-known fact that the cheaper the rates of postage are, the more money is made by the Postal Department. Years ago, when the postal rates were very high, the receipts of the Post-Office Department were not as great as they have been these last years. We believe that if the postal rates were reduced to one cent per half ounce for letters, and a half cent per ounce for papers, the receipts of the Department would be greater than in any former year. Besides, the people pay for the maintenance of the Department, and are entitled to have their matter sent as cheaply as possible. Express Companies are able to live, even though they do not reduce their rates. They have been charging just such prices as they pleased, and have been growing wealthy. Reductions in postal rates will force them to reduce theirs, and thus the people will be benefitted in two ways.

In bestowing the Cardinal's hat upon Archbishop McCloskey of New York, the Pope has not only conferred an honor upon an able and devoted member of the American Hierarchy, but upon the whole Church in the United States. It is also an honor conferred upon the American people, and as such is recognized by those great organs of public opinion, the daily journals of the large cities. The American Hierarchy has been illustrious by such men as Kenrick, Purcell, Hughes, Spalding, England, and others, and is to-day composed of many men distinguished in literature and in theology. The course pursued by the Prelates of the Church in this country when troubles have come upon us has been characterized by prudence, firmness, and discretion. Prudent they have been in their counsels, firm in their defence of faith, energetic in the cause of religion, and discreet in their dealings with all. The proceedings of the last Plenary Council of Baltimore commanded the unreserved praise of all theologians in Europe. The spread of the faith under their direction has been the astonishment of all mankind. The liberty of the Church here has received the testimony of the Pope himself, who declared that in the United States alone could he act without the interference of the Government.

In recognition, then, of the learning and ability of the Hierarchy, as a proof of the high estimation in which the Catholic Clergy of the Union are held in Rome, and as a proof of the love which the Pope bears towards the zealous laity in the United States, his Holiness has bestowed the Cardinal's hat upon Archbishop McCloskey, whose chair is in the largest city in America. That other hats will, in the course of time, be given to American Prelates, there can be no doubt, for it will be the just recognition of the services and importance of the American portion of the Catholic Church.

—The telegraph on Monday last announced the death of John Mitchel, the newly elected M. P. for Tipperary. He was a graduate of Trinity College, Dublin, and for six years had been a lawyer in Ireland, when he embarked in the revolutionary agitation which culminated in the brief and hopeless rising of 1848. He was arrested, tried for treason, and sentenced to transportation for fourteen years. He was taken first to Bermuda and thence to Australia, but escaped from there and came to New York in 1854. John Mitchel was a man of extraordinary and noble qualities. He was honest through and through, not in any sense of mere pecuniary integrity, but in all his opinions, motives, and impulses. There was no taint of falseness about him. While he hated the English Government with a supreme hatred, his detestation of every form of sham was even greater. He not only spoke the truth at all times, but he spoke the whole truth by a kind of moral necessity. He knew no reserve and no disguise, and we may even say, no prudence in this regard. Beyond all other men, his sincerity was perfect, and his courage fearless. He possessed the highest bravery—the bravery which scorns every compromise and glories in avowing an unpopular conviction. He was always ready to do battle for his ideas, and the odds he never counted. A crust with truth seemed better to him than untold wealth with a compromise. Yet, while he was always armed and ready for fighting, he did not love fighting in itself; and except for an idea or a sentiment he would not contend. His heart was as kindly and tender as it was sincere, and in friendship he was as true and faithful as in patriotism.

Mr. Mitchel possessed many scholarly accomplishments. His reading was extensive, his learning varied and substantial, and his English style simple, idiomatic, and vigorous. He had also a great deal of humor, with a tendency to paradox and a ready appreciation of wit; but he was too intensely earnest to be witty himself. His nature was Puritanic, and not entirely at home in an age of commerce, amusement, and money making. Had he been more capable of adapting himself to the world and to views of ordinary common sense, his career might have been much more successful, but it would have been pitched upon a lower key, and would have lacked the austere virtue which makes it memorable.

—The Vox Humana quotes with approval an article on "Circulating Music Libraries" from the Boston Transcript. The writer of the article, after speaking of libraries for the reading public and their great utility, goes on to show the great difficulties experienced by persons who wish for
music books, etc. Every person must purchase his music or go without it. Although the price of sheet music may be small, yet when one comes to buy a great deal of it he finds that it takes considerable money to get it, and no musician can escape big bills for his new music. Every-one who plays must have music, but one way remains for him by which to get it, and that is to buy it. But which music will he buy? He may invest his money in some publications and then find that the music is altogether too difficult for him. Again, he may purchase the music and find that it is perfectly worthless. What is he to do? Use his money buying difficult or worthless music? No. He must find out what music is suitable for him to buy. There should be circulating music libraries from which he can procure the music suitable for him. From these libraries he will be able to obtain the music he wishes. Then if he finds that it is the proper music for his collection, he can purchase and know what he is buying. There is no such thing in this country as a Circulating Music Library, though the writer tells us that other countries have them.

We have no doubt but that, although the repertory, here at Notre Dame is perhaps very good, in a few years it could be made very valuable were there a circulating Music Library formed for the musical students, on the same plan as the Lemonnier Circulating Library for the students generally.

Art Notes.

—Prof. Gregori has nearly finished a beautiful portrait of Very Rev. E. Sorin.

—The municipality of Romelati-offered two large sums of money as prizes, one for the best work of sculpture, the other for painting. That for sculpture was adjudged, but that for painting was not: being no works worthy of the prize. Evidently, regenerated Italy is going backwards as far as the arts are concerned.

—A magnificent central piece in silver gilt, the work of the celebrated Nuremberg goldsmith, Wenzel Jamitzer, has recently been acquired by the director of the Germanic Museum in Nuremberg. This recent piece had been long treated in the Merkel family, but on the recent suspension of the banking firm of Lodel & Merkel it was placed in the museum for the benefit of the public. The Merkel collection contains also three hundred engravings by Albert Dürer, and many valuable curiosities.

—The Empress of Russia, having heard that in the Garbarini palace of San Remo there was a famous picture by Raphael, called the Madonna della Rovere, sent her secretary to its owner, Dr. Pichino, to entreat him to sell it to her for a large sum of money. He refused to hear her majesty’s proposal, and has thus saved Italy one of her treasures. This picture, which is little known, was painted, as a token of respect and gratitude, by Raphael for the Duchess Feltria dell’ Rovere, Duchess of Urbino, who had recommended the master painter when a young man to Pierre Soderini, Goufaloniere of Florence.

—The mortality among painters during the last two or three years has been noticeably great. Landseer, Kaulbach, Maclain, and a crowd of others of sufficient celebrity to make their loss generally observed, have died within that time, and the list has been lately swelled by several other cases. Among the recent cases are the deaths of two talented painters at Dresden and Paris, on the same day—the 7th of December, 1874. These were Otto Georgi, a landscape painter of Dresden, chi-fy known by his Oriental scenes, and Gustav Wrappers, painter to the King of Belgium, whose portraits and historical pieces have been greatly admired.

—Late numbers of some of the German papers contain accounts of the newly discovered art which has been called “Pinakoplastic.” As the name implies, this is a real combination of painting and sculpture. It is true that the “tinted” statuary which already exists is, in reality, such a combination. But the new art is quite sui generis, and altogether different from anything that has, as far as we have any means of knowing, preceded it. The pinakoplastic sculpture-pictures are largely composed of cork, and as this is an expensive material, when sold, they have the advantage of being remarkably free from elements conducive to decay. They are usually covered with glass, and this encasement not only serves its principal purpose, which is to keep them free from dust and other impurities, but also, it is said, has a desirable effect in heightening and bringing into relief such beauties as they may possess. Some of these pictures—if they may be called pictures—were lately exhibited at Munich, and excited a great deal of admiration and curiosity. They were all landscapes, and upon the following subjects: The City of Bristol, in England; the Lake of Geneva and the Waterfall of St. Sebastian; Flolens, in Canton of Uri; Zurich; the Castle of Chillon; Niverina Falls and the Suspension Bridge; Stockholm in Norway; Rhenenstein, in Germany; Ammerland, among the Bavarian Alps; Grijsbohain, in Holland; and the ruined castles of Falkestein, in Germany, and Attinghausen, in Switzerland. The credit of discovering this new art is due to Conrad Hock, a garbarinian, of Bergen, in Norway. He has spent many years in perfecting it, and has only very lately been able to present it to the world in a tangible form. It is too early yet to tell what results will ensue from this innovation upon the old order of things in art; but whatever may be its ultimate consequences, it is certainly a very remarkable and interesting invention.
Many of those art-treasures and curiosities nowadays come to America.

**Literature.**

"O'Shea, of New York, is issuing a series of Juvenile works written by a lady under the nom de plume of "Winnie Rover." Her latest book is entitled "The Neptune Afloat!"

The recent declination of aristocratic titles by Tenney and Carlyle has occasioned unusual remark in England, and given to literary men a fine opportunity to "glorify their office."

The Grand Duke of Mecklenburg-Schwerin is writing a book on the Franco-Prussian war of 1870-71, which is more especially devoted to the events in which his division took an active part.

The King of Burmah announces that he is about to start a newspaper, and will do the leaders himself. Every Burman who does not subscribe will be shot, or in some quiet, economical way removed from the planet.

Max Müller goes soon to the Continent, where he will make arrangements for the great work which he has undertaken—the translation into European languages of all the Oriental Bibles. The great Oriental scholars of Europe will co-operate with him in the work.

Mr. Alfred Tennyson is one of the few poets who have productive lands and money. He possesses manors in several English counties, besides the fine home and estate in the Isle of Wight. His house at Haslemere, in Surrey, was occupied by Earl Russell during the writing of his Recollections. We suspect, however, that, with the single exception of Samuel Rogers, if this or any previous time has enjoyed so large an income as Mr. William Cullen Bryant. Besides owning several fine country places and the income from his copyrights, his revenue as part proprietor of the 'Steen Post' is of a princely character. Indeed, he could live elegantly on the interest of his income. Rogers was a very opulent banker, and poetry one of his passions. Mr. Bryant's whole life has been devoted to writing.

The April number of that ablest of magazines, The Catholic World, has been received and read with the highest pleasure. The publishers say that "its aim is to furnish desirable reading for all the members of a household: articles on Theology, Philosophy, or such subjects as Natural Science as have a direct bearing on current discussions, for the thoughtful; Historical, Biblical, and Critical articles and Sketches, for those in pursuit of information under inviting forms: Stories, Poetry, and Miscellanea for those who desire mental recreation that is at once attractive and elevating in its character—In short, a magazine which the clergy can commend with confidence to their people, both for its own sake and as a corrective of the influence of the unwholesome literature to which they are frequently exposed." We believe that they have succeeded in the present number in accomplishing their aim, and a glance at the table of contents will show: I. Religion in our State Institutions: II. The Veil Withdrawn: III. March; IV. Calderon's Autos Sacramentales; V. Are You My Wife; VI. The Future of the Russian Church: VII. Starry Leaves from a Passing Life; VIII. In Memorium: IX. The Tragedy of the Temple; X. Spring; XI. Substantial Generations; XII. The Leader of the Centrum in the German Reichstag; XIII An Exposition of the Church; XIV. Odd Stories; XV. New Publications. Published by the Catholic Publication Society, L. Echoe, Gen. Agt., No. 9 Warren street, New York city. Terms, $3.00 per annum in advance.

**Musical Notes.**

The singing during Holy Week was well rendered.

Dr. H. T. Leslie, of Haydn Villa, Reading, England, has made a metrical setting of Collins Graves' Ride.

—Sir Julius Benedict has composed a fantasia upon the "Star Spangled Banner" for Mdc. Arabella Goddard.

—N. W. Gade and J. Brahms will each furnish a new choral work for the next musical festival at Birmingham.

—Vocal culture is not neglected among the Minims. They have a regularly organized glee club, and sing frequently for their own amusement.

—A Mr. Hamilton, of University College, Oxford, England, has been at work for some time perfecting an Elfin harp. In addition to strings, he has employed reeds, and by their use obtains notes of great sweetness and power.

—An amusing incident is related of Rossini and an old Neapolitan priest. The good old Padre having just listened to an excellent rendition of Rossini's Messe Solennelle, accosted the composer in the following strain: "Rossini, if thou dost but knock at the gates of Paradise with this Messe, in spite of all thy sins, St. Peter will not have the heart to refuse thee an entrance."

—We have received from Geo. Woods & Co., Cambridgeport, Mass. The Vox Sumana for April. Among the articles are "The Dread of Criticism," "Unmusical Ministers (a very readable article), "The Early Dance Forms," "Circulating Music Libraries," "Absolute Music," and "The Programme with Notes." The music of the number is very good. Among others is a selection from "Lohen- grin."

—Haydn was the most religious of all composers. "When I was working at the 'Creation,'" said he, "I felt myself so penetrated with religious feeling, that before I sat down to my piano I prayed confidently to God to give me the talent necessary to praise Him worthily." If when composing his Mass he felt troubled for want of ideas, he rose from the piano, took his rosary and prayed for inspiration. This means, he said, never failed him.

—The Revue de Musique Litteraire, we learn from the Catholic Review, contains a very interesting article on the Stabat Mater. It proves that the introduction of the famous chant is due to Innocent III, and not to Jacopone as has hitherto been asserted. The Franciscan (Jacopone) only imitated and amplified the work of the Pope. The writer is, however, in error when he informs us that the early Christians had no bells or organs in the churches, and that their manner of summoning the faithful to prayers is unknown.

—We have received from S. T. Gordon & Son, No. 13 East 14th St., New York city, a copy of "Silver Threads of Song," an excellent new school book of music. The book was compiled by Millard, the great song writer, and contains, in addition to a large number of songs written by Millard for this book, some of the choicest popular songs of the day, such as "Start Me up among the Gold," "Under the Daisies," etc. It will make an excellent book for seminaries and schools; and some of the younger students here would find it useful to them. When out walking, riding, etc., there are many of these songs which would add much to their enjoyment. It contains 293 pages, and costs only sixty cents. It is just the book for the Philomathes and Philopatriots.

**Scientific Notes.**

—Sir Charles Lyell, Bart., F. R. S., the celebrated geologist, died on the 22nd of Feb. last, at the age of 73 years.

—It has been calculated by Helmholtz that the rapidity with which an impression is transmitted through the nerves is about 93 ft. per second.

—A party of German professors, under the lead of Prof. Christ of the University of Munich, will undertake a scientific expedition into Greece and Asia Minor this Spring.

—The discovery is announced of a new planet (142) by Director J. Poldis, at Pots, with a telescope of 7½ ft. focal length. It made its appearance on Jan. 35th, and is of the 12th magnitude.

—Panama Bay has been unusually phosphorescent during the past month. At night, it is said by local newspapers, every wave as it breaks on shore and on reefs looks
like a wreath of bluish fire. The star-like light thus given out announces the presence of myriads of the oceanic animals with which the sea abounds at this season.

The Bishop of Cantow, China, says the Catholic Review, has sent to the Jardin d'Acclimatization of Paris, a very singular plant, called the convolvul flower. This is a kind of creeper of the convolvul tribe, and changes the color of its flower, a kind of morning-glory, three times a day. In the morning it is deep blue, at noon it is pink, and at night it becomes quite white and soon afterwards fades away.

Mr. Honnessy writes from Massorie to Prof. Stokes that he has observed in the solar spectrum certain white lines which he is unable to account for. He cannot think that these are due either to the instrument or to the latitude of the station. The white lines in question cannot be described as absolutely white, yet they closely resemble threads of white frosted silk held in the sunlight. They are best seen about noon.

The increase of the cultivation of beetroot in Europe for the manufacture of sugar is said to be causing great loss to the cane-sugar planters in Cuba, who have been at an enormous outlay for machinery and labor to produce the fine class of sugar that is imported thence. Should the European manufacture and consumption of beet-sugar go on with the rapidity anticipated, it is feared that during the past four years serious changes are anticipated in the cane-sugar productions all over the West Indies.

Prof. Krüger, Director of the Observatory of Helsingfor, after an extended series of calculations on the weight and distance of the double star 70 P Ophiuchi, has arrived at the following results: Mass of the double star, 312 that of the sun; half the major axis, 303 times our distance from the sun; distance from our solar system, 1,371,700 times the sun's distance from the earth. It requires light travelling at the rate of 180,000 miles per second, 19¾ years to come from the star to us.

The nature of the auroral light is the subject of a communication by Lemstrom, who concludes that the white flaming appearances occasionally seen on the summits of mountains in Spitzbergen and in Lapland are of the same nature as the Northern Lights. Similar appearances have also been seen in other parts of the world. Electrical currents that develop themselves in the earth when the auroras are present are not induction phenomena caused by the atmospheric auroral currents, at least not in Northern regions.

We mentioned some time ago the discovery of additional remains of bones of the great auk upon the Funk Islands, off the coast of Newfoundland; and from another source we learn that portions of remains of about fifty individuals were obtained. Some of these have been found complete skeletons, although there were sets of bones, other source we learn that portions of remains of about fifty individuals were obtained. Some of these have been found complete skeletons, although there were sets of bones.

The first annual report of the Zoological Society of Cincinnati, for the year 1874, has been published, giving an account of the present condition of that important enterprise. From this we learn that, after various efforts to secure a proper site, a suitable locality was obtained in the north-western corner of Avondale, of 604 acres, for which a reasonable annual rental is to be paid. About $120,600 have been raised in the form of capital stock, and this, with the regular receipts, will be quite sufficient for carrying on the establishment and furnishing handsome interest on the investment.

Some of our younger readers may like to try the experiment of making a hanging garden of sponge. It is a pretty novelty. Take a white sponge of large size, and sow it full of rice, hemp, canary, grass, and other seeds; then place it in a shallow dish, in which a little water is constantly kept, and as the sponge will absorb the moisture, the seeds will begin to sprout before many days. When this has fairly taken place, the sponge may be suspended by means of cords in the window where a little sunshine will enter. It will thus become a mass of green foliage, and should be refreshed with water daily so as to be kept moist.

The German Society of Arctic Exploration has finally concluded to take the necessary steps for a new polar expedition, to sail in June, 1875, if the preparations can be made in time, otherwise in 1876. There will probably be two steamers of about 500 tons burden, with crews of from two to three hundred, and the proper complement of scientific men. To one vessel will be entrusted the exploration of the deep fords on the east coast, running into the interior of Greenland; the other steamer is to push northward along the east coast in the direction of the pole, and send out sledge parties from time to time. The expedition will be provisioned for three years.

As there are no vessels fitted for the service in the imperial navy, it is probable that they will have to be built or purchased from the merchant marine. The total cost of the building is estimated at 150,000 thalers, with as much more for provisioning, stores, and instruments.

If the expedition can start during the present year, it will, of course, serve as a companion to the British expedition, the two possibly becoming auxiliary to each other in North Greenland.

The distinguished Italian astronomer Schiaparelli has communicated to the Journal of the Italian Spectroscopic Society some studies upon the nature of the repulsive forces which contribute to the formation of the tails of comets. The actual existence of this force is established by the accurate observations that have been made. He examines successively the various theories that have been put forth—the electrical theory as proposed by Zöllner, the evaporation theory of Zöllner, and the electrical theory as proposed by Zöllner's views have been elaborated more minutely, and he has endeavored to show that the free electricity existent on the surface of the earth is sufficient to produce an effect similar to that found in comets, but his conclusions are in too many respects at variance with actual observations to allow the author to consider them as affording a reasonable explanation as to the nature of comets. Zöllner's views are rejected by him for the reason that the evaporation of fluids from the surface of the nucleus should give rise to several phenomena not seen in comets, while on the other hand, it does not explain the multiple tails which have frequently been observed. In conclusion, Schiaparelli thinks that we are forced to believe that the repulsive force acting upon comets is a force exterior to the comet itself, and since this force evidently operates in the direction of the radius drawn to the comet, he therefore must regard it as having for its origin the sun or some medium surrounding the sun, and he adds that this is about all we at present know upon the subject.

Society Notes.

The 51st regular meeting of the Columbian Literary and Debating Club was held March 21st. The following subject was chosen for next debate: Resolved, "That Washington was a Greater Man than Napoleon." The debaters appointed were: affirmative, Mooney, Crummey, and Kennedy; negative, Campbell, Ratigan, and Soule. The Club passed resolutions thanking St. Patrick's Library Association, of South Bend, for the banner kindly loaned for the Exhibition, and also those who rendered important services in the Exhibition. The meeting then adjourned.

The twenty-fifth regular meeting of the St. Stanislaus Philopatrian Society took place on March the 23d. At this meeting the debate—Resolved "That Gymnastic Exercises are Beneficial to Health" took place. Masters
Quan, Piliod, Roelle, Budd, French, Raymond, Walsh, and Lounsfry stood up bravely for the affirmative; Masters Delvecchio, Vanaman, Larkin, J. Nelson, N. Dryfoos, and Kleinig warmly supported the negative. There was sharp shooting on both sides, but the affirmative came out champions. H. Quan, L. N. Piliod, W. Roelle, J. Nelson, J. Delvecchio, J. French, C. Larkin, E. Sugg, E. Washburn, Geo. Budd, F. Raymond, N. S. Dryfoos, F. Hoffman, F. Kleinig, and E. Davis, delivered declamations. W. Morris presented himself for membership, and after fulfilling the regulations of the Society was unanimously admitted.

The twenty-ninth regular meeting of the St. Cecilia Philomathian Association took place March the 22d. The chief exercise at the meeting was the debate: "That Works of Fiction are Injurious to Students." Masters Wood, Downey, McNamara, Dare and Faxon were on the affirmative; while Masters Best, McIntyre, O'Hara, and Walker upheld the negative. Decision was given in favor of the affirmative. The debate was well prepared, but some of those who were appointed on the negative were not present; otherwise the affirmative might have been pretty well shaken. The debate over, the following readings were given: Messrs. Minton, Best, Arnold, and F. Smyth. Masters T. NeManara and R. Walker closed the exercises with spirited declamations.

The first meeting of the Scientific Association for 1875 was held in the College Library, on Wednesday, March 24th, at one o'clock, p.m. Rev. J. A. Zahm presiding. The object of the meeting was to elect officers for the ensuing session. Much regret was expressed on account of the absence of R. v. Father Carrier, founder and former President of the Society; and though he is now far away in the sunny South, he is still fondly remembered by all the members of the Scientific Association, who have, as a mark of their esteem, elected him Honorary Director of their Society.

The other officers are as follows:—President, Rev. J. A. Zahm; Vice-Pres., Prof. T. F. O'Mahou; Recording Secretary; Prof. T. A. Bailey; Corresponding Sec., T. H. Grier; Treasurer, R. W. Staley; Librarian, H. Y. Hayes. Messrs. T. J. Murphy, E. J. McLaughlin, J. J. Gillen, T. F. Galagher, E. G. Gravos, F. Devoto and J. Caren were elected members. The time of meeting then agreed upon was Sunday evening; the first meeting to be held on April 11th, at which time Rev. J. Zahm will deliver a lecture. A programme for each evening's exercises was made, which the President insisted on being fully carried out; stating it would be necessary for all to prepare their parts in the exercises well, that meetings might prove both interesting and instructive.

Personal.

—Brother James went to Chicago last week.

—J. A. Wilstach, of Lafayette, Ind., is travelling in Europe.

—T. M. O'Leary has our thanks for favors shown last Saturday.

—We were pleased to see Mr. Curren, of Michigan, here the other day.

—J. Breckweg, of '71, is a candidate for City Treasurer of Lafayette, Ind.

—Bros. Alban and Francs de Paul have been under the weather lately.

—Rev. J. A. Fanning, of the Chicago diocese, was at Notre Dame on Tuesday and Wednesday last.

—We had a visit from Hon. W. C. McMichael, our old foreman, and his brother, Alex, on Wednesday last.

—Very Rev. Father Sorin will not be able to go South this Spring. He will go to Europe in a few days. May he have a happy voyage!

Local Items.

—Who got shot?

—Fine weather lately.

—Come, gentle Spring!

—Who would be a weather-prophet?

—S—, why didn't you ride that mule?

—How about the rain last Monday, eh Professor?

There is some talk of an Exhibition next month.

—Who was that person who got bounced out of bed?

—A few of the ball-clubs held meetings Wednesday.

—Mr. John Ney gave us a Deo Gratias Tuesday evening.

—The Collegiates had a new study-hall faculty for a few days.

—All agree that the picture of the College is a splendid affair.

—Our little folders did some quick work last Saturday night.

—Don't say "powder" to our friend John or you may get hurt.

—We are under ever so many obligations to Tom for the help he gave us last Saturday.

—What with the new Church and the repairs in the College, the carpenters have plenty of work.

—Well now! In spite of the snow, some Seniors played hand-ball the other day.

—From this time out the boys do not go into the study-hall before supper.

—Henceforth and forever we will place no reliance in any weather-prophet save the reliable follower of Ryan.

—The Philopatrians will play "the Blind Boy" next month. It is an excellent little drama.

—Bros. Fidelis and Ferdinand captured two fine, large rabbits, one near our office the other near the Mortuary Chapel, on Tuesday last.

—Latest.—Our friend John says that if you are afflicted with a headache, and cry aloud as loud as you can, you may be sure of almost an instant cure.

—The resident Alumni held a meeting on the 21st. Their next meeting will be on the 11th of April. They will soon begin making arrangements for the June meeting, at which many of the boys of old will attend.

—We thought that a drug-store was a place where they retailed drugs and medicines; but, judging from the howl, at which many of the boys of old will attend.

—The resident Alumni held a meeting on the 21st. Their next meeting will be on the 11th of April. They will soon begin making arrangements for the June meeting, at which many of the boys of old will attend.

—The Scholastic, February 25, 1893

—We publish the names of all the nines. All persons who wish to send THE SCHOLASTIC to the players of other years will please leave word at the Student's Office before next Saturday, so that we may know how many extra copies to print.

—We have received from a student the following letter: "A certain set of young men in the College have lately got into the habit of using broken English, in imitation of the first attempts of a Teuton citizen just from the 'Vaterland.' Circumstances happening to me have very often put me in the way of hearing them, and I have several times caught them using such expressions as 'I don't like me do,' 'How high vas do,' 'I make you ond bel dot vinder,' 'I kuck meinselfe,' etc. Now, Mr. Editor, I am a youth who tries to speak correct English, and it is rather mortifying to find myself falling back so far as to speak like 'green German'; especially as I cannot speak a word of the Vater-sprache which he speaks so fluently. Should these young gentlemen persist in speaking thus in my presence I shall soon be without any language at all; and should I try to learn German it would be spoiled by my abominable English. It seems to me that these young men should consider their high station, and disdain to speak like an untaught German. It would not be so bad if they would talk among themselves only, but they must needs speak this nonsense before younger people, and thus set them a bad example. The influence of these young men has been so widely felt that it is quite common in either yard to have a young fellow walk up to you, slap you with great force upon the back, and say: 'Dot is der kind of a hairpinc I am.' "

—"I do not know whether you will publish this or not, Mr. Editor, but I hope that you as the censor of manners and the general fitness of things around Notre Dame will give these young men such a list of the misdeeds that they are doing to others as well as to yours truly.

WILL HONEYCROFT, JR."
Hutchinson and B. Wilson equally worthy to draw for the prize. Miss Lulu Hutchinson was the fortunate competitor. The misses were too timid on Wednesday, and the contest was postponed to Sunday evening, when a committee of three decided that Angela Evang, Carre and Mary Hughes, and Anna McGrath, were equally entitled to draw for the prize. A fall to Carrie Forbus. A encore of the Junior recitation, presented on Wednesday, filled up the evening until an unusually late hour, as the distribution of points was succeeded by the reading of "Libra," by the Graduates.

TABLET OF HONOR.

FOR THE WEEK ENDING MARCH 14.

SCHOOL OF DESIGN.

DRAWING.

2nd Prep.—Misses C. Maigrey, L. Bosch, L. Brownbridge, L. Schussa, M. Raftin, S. Swallow.

1st Jr.—Misses A. peak, I. Mann, K. Hudson, M. Bell, C. Hughes, E. Simpson.

2nd Jr.—R. Golsberry, T. Yee.

MUSICAL ITEMS.

—Tuesday evening the young musicians passed their ordeal successfully. Miss Emily Haggerty commenced by playing an Etude by Beyer—she is much improved in time and accent. Miss Cavanor has been a short time under tuition here—her firm attack of five-finger triplets and scales in every form, will certainly lead to a brilliant future. Miss Bennett gave examples in wrisr motion; with her amiable manner and a little more courage she will do well. Miss F. Wells also played scales and five-finger exercises—is making good progress. We shall be pleased to hear her again. Miss F. Wells also played scales and exercises from Czerny's Velocity; her runs were smooth, full legato, showing she understands the value of those horrid scales. Miss Dillinger played the same exercises, with good equality of touch. Both young ladies must try to overcome their timidity and do themselves justice. Miss A. T. Clarke played an Etude on detached notes and Arpeggios—her execution is of great taste, and pleasing throughout. Miss M. Roberts played from Czerny, No. 1; touch in the crescendo parts; fingering good. F. Dilger played from Czerny's No. 5; each interval was rendered distinctly; she is a credit to her teacher. K. Joyce played No. 5 of Czerni's 1st Book; it was well worked out. Miss H. Russel, exercises from Czerny, No. 1; she is also improving, but needs a little more strength of touch in the crescendo parts; Finger technique is defective. Misses M. A. Roberts played from Czerny, No. 1; her scales were strong and fluent, and position excellent. Not being present at the February examination, she finished the pleasant evening with a "Tyrolienne Voile," by Schad. Alpine melodies, simple and pure in tone, have a peculiar charm, raising the heart to heaven, and instinctively we join those mountaineers in their sunset hymn of "Praise to God."

Thursday afternoon the young ladies were prompt and alive to the object of meeting; which shows appreciation of this means to improve their taste, criticism, and love of real musical culture. Miss Dillinger played scales from one end to the other of the keyboard, clear and strong, each tone heard at full sound. Miss L. Hutchinson, major scales, from Czerny, No. 1; she has a large and light touch. Miss McKinnon, minor scales; each tone was rendered distinctly; her scale playing an Etude on detached notes and Arpeggios—her execution is of great taste, and pleasing throughout. Miss M. A. Roberts played from Czerny, No. 1; she is also improving, but needs a little more strength of touch in the crescendo parts; Finger technique is defective. Misses M. A. Roberts played from Czerny, No. 1; her scales were strong and fluent, and position excellent. Not being present at the February examination, she finished the pleasant evening with a "Tyrolienne Voile," by Schad. Thursday afternoon the young ladies were prompt and alive to the object of meeting; which shows appreciation of this means to improve their taste, criticism, and love of real musical culture. Miss Dillinger played scales from one end to the other of the keyboard, clear and strong, each tone heard at full sound. Miss L. Hutchinson, major scales, from Czerny, No. 1; she has a large and light touch. Miss McKinnon, minor scales; each tone was rendered distinctly; her scale
from her distant home for the regular examination, she also played a very interesting piece by Chopin, marking the expression, and using properly the much abused extension pedal. She was promoted by common consent to a higher class.

—Saturday morning, we visited the Juniors’ Singing Class—and were very much pleased at their readiness in reading notes, and spelling them musically, keeping the pitch throughout without falling; the two-part exercise came out clearly. Misses Craven, A. Harris, Schultheis, Mann, Brown, M. Ewing, A. Ewing, E. Simpson, and the little altos, with big voices. Misses Miers and Goldsberry, made themselves heard. Ada Peak, A. Gower, and many others, sang admirably. I am sure Mother Superior will be delighted, when she returns, at the progress of this Class.

110 studies, Opus 453; the object, turns and trills for both hands, in good time and true accent; returning too late.

UNIVERSITY of NOTRE DAME, INDIANA.

FOUNDED IN 1842. CHARTERED IN 1844.

This Institution, incorporated in 1844, enlarged in 1852, and fitted up with all the modern improvements, affords accommodation to five hundred students. Situated near the Lake Shore & Michigan Southern Railroad, it is easy of access from all parts of the United States.

THE SCHOLASTIC.

A JOURNAL DEVOTED TO THE INTERESTS OF THE STUDENTS.

Published Weekly, During Term-Time, at the UNIVERSITY OF NOTRE DAME, INDIANA.

$1.00 PER YEAR.

The "Scholastic" is the title of a neat little paper published every week, except in vacation, at the University of Notre Dame. The chief object of this paper is to keep the parents and teachers informed of the various subjects of study and discipline at this University and at St. Mary's Academy, and of the progress of their sons and daughters in these two institutions. For this purpose, regular weekly reports are given, consisting of the names of those who desire to be on the list, and the remainder are inserted for the interest of the community.
