IN 1842 the Very Rev. E. Sorin, Superior-General of the Congregation of the Holy Cross, visited this place for the first time, having previously traveled through a great part of the Northwest in the discharge of his missionary duties. Specially interested in the promotion of education, as representative of the Congregation of the Holy Cross, a mere glance fully satisfied him that this would be a most desirable site for an institution of learning; and he determined here to remain, here to establish the chief house of the Congregation, here to build the

University of Notre Dame.

In that year it was founded, and in 1844 it was chartered by the General Assembly of Indiana. Its growth kept pace with the rapid progress of the Northwest; it exhibited an enterprise not unworthy of comparison with the energy and public spirit that peopled the prairies and built the magnificent cities of the Mississippi Valley. Building after building was erected as the needs of its progress seemed to require. The number of students steadily increased, and the reputation of Notre Dame passed from State to State until it reached the remotest parts of the country. Before many years elapsed the University had attained an honorable rank among the educational institutions of the Union.

A few years ago, however, the University was subjected to a most severe trial. April 23d, 1879, five of the buildings, including the main one, were entirely destroyed by fire. The contents of the museums, libraries, class-rooms, study-halls, etc., were burned to ashes. But the energy and recuperative powers of the institution were equal to the emergency. While the fire still lingered among the smoldering ruins active preparation for the new building was begun, and during May and all the summer
the work of constructing it was busily and uninterruptedly prosecuted. When September came, and the students returned, they found on the site of the old building one of the largest and most magnificent college edifices in the country. Since then the needs of its growth and progress have rendered necessary the construction of a wing on either side, while several large and imposing buildings have been erected in the vicinity. Several of these are so large that they do not suffer by comparison with the main building, due allowance being made for their respective uses. All of them are new, well lighted, thoroughly ventilated, heated by steam, and supplied with the most useful modern improvements. They present a striking harmony of color, being built of cream-colored brick. But even a very brief description of

**The Main and Ancillary Buildings**

necessarily involves a more specific reference to them severally, and the most natural order of dealing with them assigns first place to the

**Main Building.** This is five stories high, while its dimensions are 320 x 155 feet. The distance from the ground to the electric light just above the statue surmounting the dome is 200 feet. The libraries, museums, art galleries, class-rooms, study-halls, dormitories, lavatories, refectories, etc., are appropriately and conveniently arranged. On the first floor are the refectories, lavatories, trunk-rooms, armories, etc. The refectories are richly ornamented with mural paintings, representing many of the most celebrated churches and buildings in the world, and beautifully illustrating the progress of architecture. The lavatories are supplied with hot and cold water, and have all the customary accommodations. The armories contain about one hundred stand of arms, with bayonets, accoutrements, etc. These arms were procured from the State, and students of the Senior and Junior departments may make use of them, form companies, and learn to drill. The reception parlors, and offices of the President, Secretaries, and Prefect of Discipline are on the main floor, as are also the study-halls, several of the class-rooms, the telegraph office, and the students' office. This floor is made of tiling, while the corridor is lined with a series
of superb mural paintings (the work of the distinguished Roman artist, Signor Luigi Gregori) which illustrate the leading events in the life of Columbus, or, more particularly, such of them as history associates with the discovery of America. Portraits of distinguished ecclesiastics, including almost all the Catholic Bishops in the United States, those living as well as those who have gone to their reward, line the walls of the corridors on the floor above, and it is appropriately called "the Bishops' Gallery." The society-rooms are on the same floor, as are also some of the class-rooms. They are tastefully ornamented with paintings and mural decorations, not to mention the busts of several noted personages. The Law Library and Lecture-room, a small museum, and the rooms of several of the professors, as well as two large dormitories, are likewise on this floor. The Lemonnier Library is on the third floor, and there also is a Museum of Curiosities. Two large dormitories that correspond in size and appearance to those below, together with the rooms of students of the graduating classes and of some of the professors occupy the rest of the floor. The music-rooms of the vocal classes and the Department of Drawing take up the greater part of the fourth floor. The Lemonnier Library contains about 30,000 volumes, not to mention miscellaneous objects of interest gathered from all parts of the United States and many parts of the world. In the Law Library are about 1,000 volumes, including many of the British and American Reports and the leading text-books. From three to four wide oaken staircases afford communication between the different floors all the way from the first story to the top of the building; and these, supplemented by several exits to the roofs of verandas and porticoes, with ample means of descending safely to the ground, remove all danger of personal injury in case of fire. But the fullest precautions have been taken to guard against that peril. With a watchman constantly on duty, water on each floor, and hose at hand, there is absolutely no danger of fire. The halls throughout the building are wide, high, and spacious. The many angles which distinguish the building were planned and constructed in accordance with the prevailing style of architecture at Notre Dame, which is that known as the modern Gothic. These angles serve to give great strength and solidity to the entire building, rendering it secure against the fury of wind and storm, not to
mention the incidental advantages of good light and perfect ventilation which they afford. Just east of it is the magnificent new Music Hall. This is 170 feet in length by 100 in width, and over 100 in height. The first floor is divided into recreation and reading rooms, the north end being for the Juniors and the south for the Seniors. These rooms are supplied, according to their respective uses, with newspapers, periodicals, bicycles, billiard-tables, base-ball and boat-club uniforms, etc. The second and third floors at the north end are appropriately divided into music-rooms, and instrumental music of all kinds is there taught. The exhibition hall occupies the remainder of the building. In it are given the more formal lectures, as well as concerts and dramatic entertainments. Fully furnished with the scenes, accessories and decorations appropriate to such uses, and capable of accommodating over 1,200 persons, it ranks as one of the largest and most attractive college halls in the country.

Science Hall. The corner-stone of this imposing edifice was laid by Bishop Watterson, of Columbus, in 1883. It is situated a few steps south of Music Hall. The dimensions are 104 x 131 feet, and the height is three stories, or about 75 feet. It is appropriately divided into departments, and supplied with all the agencies requisite to facilitate the acquisition of a complete knowledge of the sciences. The laboratories, machinery department, lecture-rooms, museums, engine-rooms, microscopic division, incandescent electric light plant, etc., are admirably arranged and elegantly finished. The Hall is fully equipped with all necessary chemicals, preparations, specimens, charts, tools, instruments, and the innumerable accessories of a great school of science. It is said to be one of the largest buildings devoted exclusively to scientific studies in the United States, and its merits, we trust, will entitle it to rank among the best. The Seniors’ campus, or play-ground, a level tract containing about ten acres, lies southeast of it. Northeast of it is

The Gymnasium, which measures 160 feet in length and 45 in width, and is two stories in height. It is abundantly supplied with swings, turning-poles, horizontal bars, and other things calculated to inspire a taste for gymnastic exercises. The north half is for the use of the Juniors, whose campus surrounds it, while the south
half is set apart for the Seniors. Just north of the Gymnasium and Music Hall is St. Edward’s Park; and fronting this, facing south, is the noted

St. Edward’s Hall, a building four stories high, and 100 feet in length, by 50 in width. This is for the exclusive use of pupils under 13 years of age. It is entirely separate from the University, though under the same general management. The building is new, and lacks none of the appointments suggested by experience as useful or desirable. It is appropriately divided into study-halls, class-rooms, society rooms, dormitories, etc. The recreation hall is just east of it, while farther east and north lies the play-ground. The pupils are under the immediate direction of competent and experienced teachers—Sisters of the Congregation of the Holy Cross.

The Infirmary adjoins St. Edward’s Hall on the west. In dimensions it is 100 x 45 feet, and three stories high. The General Office occupies a portion of the first floor. The rooms on the floor above are kept in readiness for the reception of students who at any time become too ill to attend class and discharge their customary duties. The regular physician of the University and the Sisters in charge minister to the sick in all cases.

The Church stands a little west and south of the main building. It is generally regarded as one of the most symmetrical and beautiful church edifices in the country. In size it is 275 x 120 feet, and the distance from the ground to the apex of the roof is about 125 feet. Richly ornamented with paintings, statuary, altar accessories, architectural devices, etc., hours may profitably be given to the examination and study of these and the multitudinous objects of interest and beauty in which it abounds. In its tower is one of the largest bells on the American continent. Besides, there are 32 smaller bells in the tower. These vary in size and constitute the noted “Chimes of Notre Dame.”

The Steam Printing Office is just north of the main building. It contains three large power presses, a folding machine, a mailing department, two composing rooms, and all the accessories of a first class printing establishment. The Ave Maria and the Scholastic, two well-known and deservedly popular weekly publications, are there printed. Between it and the Infirmary is
The Boiler-House, from which rises the great chimney so conspicuous in the vicinity. This building is provided with double furnaces of the largest size—furnaces that sometimes consume 35 tons of coal in a day. It has, too, a full supply of engines and other machinery. On the second floor are bath-rooms for the students. South of and connecting with it is an annex which contains the engine and plant recently placed there by the Edison Electric Light Company. It is one of the most powerful of the kind in use, and by means of it the University is supplied throughout with the incandescent electric light. The refectories, lavatories, study-halls, class-rooms, offices, and private rooms and apartments are all supplied with this superior illuminating agency, not to mention the crown and crescent of the great statue, which present a most striking appearance at night, and are visible for miles, in every direction, like a beacon-light upon the ocean.

A regularly established United States post-office is situated on the University grounds, a short distance from the main building. It is particularly intended for the accommodation of the University and St. Mary's Academy. But there are too many buildings at Notre Dame to receive notice in this connection. Indeed so numerous are they that, if brought close together, they would cover at least four or five acres of ground. Nevertheless, the work goes steadily forward and great improvements are made from year to year.

Surroundings.

The University is situated about a mile and a half north of the flourishing city of South Bend, Ind., and about eight miles south of Niles, Mich. It is surrounded by a fertile and prosperous farming country. And, yet, by reason of its proximity to South Bend, it combines the conveniences and accommodations of city life with the salutary isolation, wholesome climate, and natural beauties of the country. A great broad avenue runs directly south from the University for a mile or more, and on both sides for half the distance it is lined with shade trees. North and west of the University lie two beautiful lakes—St. Joseph's and St. Mary's. The area of the former is but a little less than 23 acres, while that of the latter is about 24 acres. The ground slopes picturesquely
down to these lakes, and beautiful walks along the shores almost surround them. On the higher ground, above the walks and overlooking the lakes, are magnificent groves of oak, hickory, sycamore, and other varieties of hard timber. St. Joseph River, swift of current and tortuous of channel, sweeps grandly past the University grounds on the west. The scenery along its steep and timber-lined banks is bold, wild, romantic.

Accessibility.

Notre Dame occupies a position almost central with reference to the most important cities of the Mississippi Valley. The railroads running directly to South Bend are the Lake Shore and Michigan Southern, the Grand Trunk, the Vandalia Line, and the Michigan Central. The road last named is connected with South Bend by a lateral line which runs south from Niles, Mich., and passes through the University grounds. Omnibuses and other conveyances, by which visitors can expeditiously reach Notre Dame, may be found on the arrival of trains at the stations of the roads indicated.

Discipline.

The regulations looking to the maintenance of discipline are sufficiently liberal to meet the reasonable expectations of all who try to conduct themselves as gentlemen. To these the rules are easy of observance; and students who do not try to behave as gentlemen must not expect to remain at Notre Dame.

There is probably no great educational institution in the country in which students become acquainted with one another more intimately than at this University. And it could hardly be otherwise, considering that they are brought, in connection with their several duties, into daily, if not hourly, contact. This fact, too, serves to emphasize the importance of requiring compliance with regulations calculated to render them courteous, upright, honorable, pure in expression, respectful to religion, and emulous to excel in their several studies.

They are required to rise at the same time in the morning, and they dine at the same hours during the day. All retire not later than 9.30 o'clock p.m., and the signal for rising is given at 5.30
o'clock a. m. At proper times, too, they are expected to take necessary out-door exercise.

While persons of all religious denominations are admitted to participation in the privileges of the University, it is, nevertheless, a strictly Catholic institution; and the students are required to attend divine service at stated times, as on Sundays and holydays. Persons who have noted with what rigor pupils in the various sectarian institutions are obliged to participate in daily worship, or "chapel exercises," can certainly not object to the discipline in this regard which obtains at Notre Dame.

Other regulations, which time has sanctioned as salutary, may be summarized as follows: 1. No branch of study shall be discontinued without permission of the Director of Studies. 2. No student shall leave the University grounds without permission of the President or Vice-President, or the persons delegated to represent them. 3. The use of tobacco is strictly forbidden, except to such students of the Senior department as receive from their parents written permission to use it. 4. The use of intoxicating liquors is absolutely prohibited under all circumstances. 5. Any person who injures the property of the University must make compensation for the same. 6. To guard against clandestine and improper correspondence, the President reserves the right to supervise letters to or from students. 7. Books, periodicals and newspapers are subject to the approval of the Director of Studies.

General Remarks.

Neither pains nor expense has been spared to secure the services of able, experienced and gentlemanly professors, and the authorities of the University have reason to believe that their efforts in this direction have been attended with results particularly gratifying. It may, too, be confidently stated that there is no educational institution in the Union that affords students more time for study or better opportunity to acquire a sound and comprehensive education than Notre Dame offers. Its comparative isolation insures immunity from distractions of every kind; society throws no allurements in the way of the student to tempt him from the performance of his duties; association with persons of depraved tastes and bad
habits is necessarily avoided; the surroundings are favorable to study, and the student must learn. Even the common pride of wholesome emulation compels him to do so. Moreover, the course of life pursued under the salutary discipline in force can hardly fail to establish firmness of character and habits that go to form a moral, temperate, honorable and conscientious man.

Students are classified according to age as Seniors, Juniors, and Minims. The Seniors range in age from 17 years upward. Their dormitories, study-hall, refectory, lavatories, etc., are in the east half of the University. The Juniors, whose ages range from 13 to 17 years, occupy the west portion of it. The Minims have a building exclusively to themselves. The three departments to which students are thus assigned, are entirely separate from one another. Seniors and Juniors are seldom brought together, except in a few classes of the Collegiate Course. The Minims have no direct intercourse with the students of the other departments.

There are ample accommodations for five hundred resident students at the University. The ventilation is exceptionally good. Scrupulous cleanliness prevails everywhere. The fare is abundant in quantity, varied in quality, and always wholesome. The classrooms are large and well lighted, as are also the rooms used by the literary, debating, dramatic, and other societies.

The societies devoted more particularly to the cultivation of music and the drama have always been very popular, and many of their members have reached a higher degree of proficiency than mere amateurs are commonly expected to attain. This is largely due to the fact that they are aided and stimulated by the sedulous co-operation and encouragement of professors well qualified to give instruction in music and the drama. Then, too, there are societies specially intended to promote the interests of religion and lead to a thorough knowledge of Christian doctrine. By means of essays and debates great readiness in speaking, as well as felicity in the expression of thought, is attained by many members of these societies.

The students of the different departments are under the supervision of their respective prefects and professors; and, while they enjoy all the freedom compatible with the requirements of good order, they are firmly held to an observance of the courtesies and
manners recognized by gentlemen in their intercourse with one another. But there is very little occasion for the exercise of rigor in this respect, as the students come almost invariably from homes in which they have been brought up under the salutary influence of careful and proper training. Having been taught to observe the manners that distinguish upright and honorable young men, it is an important aim of the discipline in force at Notre Dame to habituate them to such manners, and to make them in all respects thorough, accomplished and carefully educated gentlemen—gentlemen whose lives will be useful and honorable, and tend to reflect credit upon their parents, themselves, and the University.

Elective Studies.

In the Junior and Senior Years there are special courses in the Natural Sciences, which are left to the option of the student.

Languages—Greek, Italian, Spanish, Hebrew. Fine Arts—Painting, Drawing (Figure and Landscape). Music—Vocal and Instrumental. Dogma. Ecclesiastical History.

Any student in this course is at liberty to take any of these studies at any period of his course, provided he can do so consistently with his regular studies. In addition to the regular recitations and practical illustrations in the Natural and Physical Sciences, Lectures are given throughout the course by the Professors.

* It must be remembered that the Language which is taken up at the beginning of the Freshman Year must be continued to the end of the course, or till satisfactorily known.
Special Courses:

Law—Civil Engineering—the Commercial Course—Modern Languages.
Special Courses.

I.—LAW.

Numerous changes have recently been made in this Department. The regular course has been extended to a period of three years; the standard of studies has been raised to the most approved plane, and the Lecture system has been substituted for the compulsory use of text-books. It may now be confidently claimed that no Law School in the country offers superior facilities for acquiring a thorough and practical knowledge of the Law. Students of the Law Department pass through a course that qualifies them to undergo the most searching examination for admission to the Bar in any part of the Union. No special preparation is requisite for matriculation. Any person who is 17 years of age, and has a fair English education, is eligible. Young men may enter the Department as students at any time during the year; though, of course, it is more desirable to do so at the beginning of the session.

The diploma admits, without examination, to the Bar of Indiana, subject to the Constitutional provision referred to in the following extract from a letter recently received from the Clerk of the Supreme Court:

"I am directed by the Chief Justice to say that all graduates [of the Law Department of the University of Notre Dame] will be admitted, without an examination, upon proper motion, at any time when the Court is in Session, subject, of course, to the Constitutional provision that applicants for admission shall be voters in the State of Indiana."

Methods of Instruction.

Instruction is given by means of daily Lectures, with accompanying examinations, and the trial from week to week of Moot-Court cases. The order of procedure in these cases corresponds as closely as practicable to that followed in the trial of actual cases and suits
in the regular courts of law and equity. The Lectures embrace the various subjects, and deal with all the leading topics of Contracts, Torts, International, Constitutional, Commercial, Maritime and Criminal Law, as well as with Medical Jurisprudence, Common Law and Equity Pleadings and Practice, Code Pleadings and Practice, Evidence, etc.

Each candidate for a degree is required to prepare and submit to the Faculty a thesis of at least 30 folio pages upon some legal subject, the selection of which is left to himself. This should be submitted about a month before graduation, and it must be satisfactory both in substance and manner of treatment. The elementary text-books may be read collaterally with the Lectures, though these are more comprehensive than in other Law Schools, and cover all subjects likely to arise in connection either with actual practice or the most searching examination. They deal with all the living branches of the Law, and the student who writes full notes of them, and diligently studies the same, acquires a complete and reliable knowledge of its principles. The decisions of the courts are based upon these principles, and it is the aim of the course of instruction at Notre Dame to impress them upon the mind in so clear and thorough a manner that they are not likely ever to be forgotten. Their relations to one another are pointed out, the growth of subordinate principles from them is explained, and their application to actual or hypothetical cases emphasizes the important office they serve in furnishing a key to complicated questions of law and equity.

While the Lectures impart as general a knowledge of the Law as students require for admission to the Bar and practice in the courts, it is nevertheless deemed advisable to urge them to pursue collaterally a course of reading. The works here named are recognized and recommended as among the most serviceable and popular of

*Standard Law Books:*

Blackstone's and Kent's Commentaries, Walker's American Law, Reeve's or Schouler's Domestic Relations, Angell and Ames on Corporations, Parsons on Contracts, Williams or Washburn on Real Property, Story on Agency, Stephen's or Gould's Pleading,
Greenleaf on Evidence, Edwards or Story on Bailments, Parsons on Bills, Daniel on Negotiable Instruments, Lindley or Parsons on Partnership, Bishop on Marriage and Divorce, Bishop on Criminal Law, Willard's Equity, Story's Equity Pleadings, Cooley or Addison on Torts, Cooley on Taxation, Cooley's Constitutional Limitations, Schouler's Personal Property, Redfield on Wills Wheaton's International Law, Story's Conflict of Laws, Benjamin on Sales, Parsons' Maritime Law, Dillon on Municipal Corporations, Sedgwick on the Measure of Damages, Freeman on Judgments, Freeman on Executions, Bouvier's Law Dictionary, Taylor's Medical Jurisprudence, Ewell's Evans on Agency, Perry on Trusts, Benjamin's Chalmers Digest—Bills, Notes and Checks,—Hutchinson on Carriers, Sutherland on Damages, etc.

All these books may be made available in actual practice, and consequently students need incur no special loss in purchasing as many of them as they can find time to read. However, this is a matter which, to a great extent, is left optional with themselves. It is not regarded as essential to read in connection with the Lectures more than a few of the works indicated in the preceding list. The Lectures are prepared with reference to this fact; and one of the objects in view in so preparing them is to place at a minimum figure

The Expenses

incident to pursuing the study of Law at Notre Dame. It does not admit of doubt that many bright and worthy young men in different parts of the country are deterred from gratifying a cherished ambition to engage in the study of Law by the apprehension that they cannot meet the expenses necessarily incident to doing so. They suppose that the single item of books demands an outlay of from $150 to $300. But that supposition is erroneous. The study of Law can be pursued at Notre Dame without any noteworthy expense, aside from such as is voluntarily incurred. In that particular, there is probably no university in the country that surpasses this in the inducements offered to students. The Law Library of the University, which contains all the standard text-books, as well as the Reports of all the States and Territories, and of all the Federal Courts, is free and open at all reasonable
hours to the students of this Department. The Law Lecture room is scrupulously neat, well lighted, and furnished with desks for the students. It is one of the best, most commodious and most comfortable rooms in the main building. While the incidental expenses are merely nominal, the accommodations, which include board, lodging, washing, etc., are excellent in all respects; and the course of study covers a period of ten months in the year. In other well known institutions the annual duration of the professional courses is from six to nine months. In view of all the facts, it is believed that the study of law is attended with less expense here than in any other well-known law school. But it is hardly necessary to indicate more particularly in this connection the special advantages offered to students of this Department.

Course of Study.

The Law Course covers a period of three years. But in cases where students are entitled to advanced standing, by reason of previous study, or where they daily attend two Lectures, they may be graduated in two years or less, providing they satisfactorily acquit themselves in the final examination. The authorities have been actuated by commendable motives in extending the Law Course to three years. In the first place, they recognize that the standing of the professions has been lowered by a too indiscriminate admission to them of persons of limited education. And they are aware that to such persons, in most cases, a professional life offers numerous disappointments, and but few laurels. It frequently proves to be a life barren of results, and the fact is usually discovered too late to admit of being effectually remedied. Having made their choice, they find themselves, as a rule, subject to circumstances that forbid a change of occupation. It is also recognized that, generally speaking, young men do not make amends for defects in their education after taking upon themselves the stern duties of practical life, and becoming involved in the engrossing cares and ceaseless activities of business. To guard against such disappointments and mistakes, it is sought to make graduation in this Department a sufficient test of the education and professional qualifications of the student to assure him that he is making a proper choice, and
to assure the profession that he may be admitted to its ranks without detracting from its dignity, compromising its honor or lowering its standard.

With a view, therefore, to supplying young men with a good general education, as well as with thorough professional knowledge, all the departments of the University are open to them. Without extra expense, they may enter the classes and pursue the studies of the Scientific and Classical courses, and be graduated in the same, if they so desire. As they find time and have inclination, they may study Mathematics, the Natural and Physical Sciences, Literature, Ancient and Modern Languages, etc., in connection with the Law. And thus the authorities of the University seek to meet the most exacting expectations of its friends, and the public generally, by assuring to students of this Department, not only qualifications of a high order in their profession, but also a sound general education.

Such are some of the considerations that have actuated the authorities to extend the Law Course to a period of three years. Students of this course mingle with the other students of the University, and, without distinction, have the same advantages, privileges and accommodations. They are likewise subject to the same rules of discipline. These rules have been adopted with reference to the acknowledged fact that a high moral standard is an important requisite to an honorable and successful career. They are calculated to shape the lives of students in accordance with such standard, and to inculcate at the same time a wholesome tone of manly dignity and honor, as well as a just appreciation of the claims of social and professional ethics.
II.—CIVIL ENGINEERING.

Candidates for admission into this Course must exhibit proof of proficiency in the art of Drawing as laid down in the Scientific Course, and must pass a thorough examination, such as is required of Scientific graduates, in Chemistry, Physics, Geology, Mineralogy, and in the several branches of Pure and Mixed Mathematics. The Course of Civil Engineering can then be completed in one year, as follows:

FIRST SESSION.

I.—DRAWING.
1 Theory—Shades, Shadows, etc.—Advanced Course in Perspective.
2 Practice—Topographical Drawing.

II.—APPLIED MATHEMATICS.
1 Civil Engineering—(Begun).—Mahan.
2 Lectures on Resistance of Building Materials, etc.
3 Pure Mathematics—Calculus Reviewed.

SECOND SESSION.

I.—DRAWING.
1 Plans and Elevations of Engineering Constructions—Stone-Cutting.

II.—APPLIED MATHEMATICS.
1 Civil Engineering—Concluded.—Mahan.
2 Lectures on Roads and Bridges.
3 Hydraulics.
III.-COMMERCIAL COURSE.

This Course requires two years' study for graduation: it includes arithmetic, grammar, letter-writing, geography, United States History, reading, orthography, penmanship, book-keeping, and Commercial Law,—in other words, all the branches of a complete business education.

Considering the character and needs of the country, especially of the great West in which we live, this course is the most practical, and one of the most important that an educational institution can afford.

Those, therefore, who have not the time or the means to take a complete College course, in the Classics and Sciences, would do well to enroll themselves in the Commercial Course. No plan of study is more injudicious than a hap-hazard selection of such studies as an inexperienced young man may fancy. The training resulting from a fixed course of studies is of the utmost benefit to the student.

The Commercial Course at Notre Dame has always received the most careful attention from the officers and Commercial Faculty of the University. Notre Dame claims to give the graduates of this course a more complete business training than can be obtained in any purely commercial college. Believing that a business education includes something more than a mere knowledge of Book-keeping, and that a good education cannot be had in a few weeks, the authorities have extended this course over two years, the shortest time in which the studies necessarily used in business life can be mastered. Should a student desire during this period to pursue any other studies in which he may be interested, and for which he has time, he will have liberty to do so. General History and Linear Drawing are especially recommended to the students of this course. They will also in the future have the opportunity of attending an elementary course of the Physical and Natural Sciences. Many commercial students find it also to their advantage to take up the study of German or French, for which there are the amplyst facilities. A talented and studious young man may
thus in the course of two years find himself in possession of a most valuable practical education, which will fit him to take his place in the front rank of educated business men.

**JUNIOR YEAR.**

*Both Sessions.*

1. Arithmetic—Written and Mental—Same as in First Year Preparatory of Classical Course.
2. Grammar and Letter-Writing—Same as in First Year Preparatory of Classical Course.
3. Geography—The amount included in both Sessions of Collegiate Preparatory Course (Eclectic Series).
4. United States History—The amount included in both Sessions of Collegiate Preparatory Course—Sadlier.
5. Reading and Orthography.
6. Penmanship.

**SENIOR YEAR.**

*First Session.*

1. Arithmetic—Written and Mental—Same as in First Session of Second Year Preparatory in Classical Course.
2. Grammar and Letter Writing—Same as in First Session of Second Year Preparatory in Classical Course.
3. Orthography.
5. Penmanship.

*Second Session.*

1. Arithmetic—Written and Mental—(Completed)—As in 2d Session of Second Year Preparatory.
2. Grammar and Essays—Same as in 2d Session of Second Year Preparatory in Classical Course.
3. Orthography.
4. Book-keeping—Banking, Railroading, Steamboating, etc.
5. Commercial Law.
6. Penmanship.

**Optional Studies.**—Phonography, Telegraphy, Type-Writing, General History, and Linear Drawing.

The routine of study in the Course of Book-keeping embraces the following, the whole being completed in one scholastic year:—Preparatory Instructions and Definitions; Initiatory Sets by Double Entry; 1st Series, embracing the Buying and Selling of
Merchandise on Private Account; 2d Series, On account of Others; 3d Series, Buying and Selling the Same on Joint Account; 4th Series, Importing and Exporting on Private Account, on Account of Others, and Account of Ourselves and Others in Company; 5th Series, Receiving and Forwarding Merchandise, the Management and Settlement of Executors' Accounts, Buying and Selling, Remitting, Collecting, Discounting, Accepting and Paying Bills of Exchange, Banking—Private and Joint Stock,—Steamboating, Railroading, Retailing by Double Entry, Farming, Mechanics' Accounts. Saturdays are devoted to Commercial Law. Particular attention is paid to the explanation of the Law of Negotiable Paper.

Miscellaneous.

Post-Graduate Course.

The students in this Course occupy themselves with Philosophy, History, and the Natural and Physical Sciences. Law, Medicine, and Civil Engineering are optional studies of the Course.

Civil Engineering.

The Course of Civil Engineering has been established of late years, and it affords advanced students the opportunity of fitting themselves for the practice of this eminent profession.

The Department of Physical and Natural Sciences.

Notre Dame has always given special attention to the cultivation of the Physical and Natural Sciences, but during the past few years extra efforts have been made in this direction, with a view of affording to her students all the facilities and advantages that may be found elsewhere. A large and commodious building, in the Romanesque style, known as "Science Hall," has been erected for this purpose, and it is the intention of the authorities to make it as perfect in all its appointments as any similar institution in the country. It is one hundred and thirty-one feet long by one hundred and four feet deep, and proportionally high. There are upwards of twenty-five spacious, well-lighted and well ventilated rooms in the building, nearly all of which are designed either as lecture rooms or laboratories for the various branches of experimental science.

The building has been carefully planned for the purpose for which it is to be used, and embodies in its construction all the improvements and conveniences to be found in the most approved scientific structures of this country and Europe. The ground plans given herewith will show the size and general arrangement of the various rooms, and their connection with the Museum proper.
Special attention has been given to make the building convenient both for professor and student. The laboratories, lecture-rooms and cabinets are so connected with each other, and with the grand apartments set aside for the museum, that specimens and apparatus are always at hand when desired, and where they can be used.

The students of Natural History have their specimens systematically arranged in rooms adjoining their laboratories, whilst the students of Chemistry and Physics have their cabinets conveniently
near, and, at the same time, independent of each other, owing to the peculiar plan of the building. The various classes can enter the rooms and laboratories without interfering in any way with one another, and can continue their studies and experiments indefinitely without interruption. The general principles of science are taught by lectures, and these are supplemented by practical work in the various laboratories.

In Chemistry and Physics the necessary apparatus are at the dis-
posal of the student, and he is expected to verify, by observation and experiment, what has not been experimentally illustrated in the lectures he has attended.

In all these departments, as well as in those of Physics and Chemistry, special stress will be laid on practical work, and a student's proficiency will be estimated by his record of observation and experiment in the laboratory and workshop.

dent commences work in the laboratory at once, and thus early becomes acquainted with the various minerals, rocks, fossils, etc. The blowpipe, microscope, polariscope and clinometer are in constant use to verify what has been learned in the lecture-room, and to fix it on the memory.

In the department of Mechanical Engineering there are fully equipped workshops, for wood and metals. Steam engines and dynamo-electric generators, and motors of various types and sizes furnish the power required, and afford the students special facilities in making experiments concerning the various forms of energy.

A Photographic Laboratory is also fitted up in the building, where the student is enabled to learn, practically and in a short time, the art of modern Photography, and thus prepare himself for professional work in the studio.

Rooms have likewise been set aside for Assaying and Metallurgy, and it is the purpose of those in charge to leave nothing undone to make the work in this department compare favorably with that accomplished in the others.

Additions of apparatus, specimens, and books for reference are constantly being made to the various departments, and no effort will be spared to make "Science Hall" a recognized center of thorough work in genuine practical science.

Languages.

It is the desire of the authorities of the University of Notre Dame to promote the study of the foreign languages, the use of which is so necessary for business or scientific purposes.

The German language—the classes of which are so numerously attended—has been taught by five instructors during the past scholastic year. The number of students attending the German classes is becoming greater every year. The study of French is recommended to all students of the Collegiate Course. The course of Spanish will receive special attention in the future, and other modern languages may be taught when required.

Telegraphy, and Type-Writing.

These branches invite the special attention of the students of the Commercial Course. Both departments are fully equipped for
practical work. The Telegraphic Department is superintended by a skillful electrician, and the classes are under the personal instruction of an experienced operator who has seen much actual service and held responsible positions on railroad work.

In the Type-writing Department the machines in use are first-class Remingtons, with the latest improvements. The instructor, besides being a practical operator, also thoroughly understands the mechanism of the Type-writer, and is capable of adjusting and keeping it in order.

**Phonography, or Short-Hand,**

of which Dr. Johnson said "its usefulness is not confined to any particular science or profession," is of incalculable benefit in the higher branches of education, enabling its possessor to take verbatim notes of lectures, etc. It is adaptable to the English, French, German, or Spanish languages. With a good English education it is a profession in itself, and one not likely to be overcrowded for years to come. First-class phonographers and type-writers are always sure of employment, and pupils in both branches here find every facility to fit them for the highest grades of practical work.

Phonography and Type-writing have of late come into general use in legal and commercial work—in the court, the law office, and the counting-room; in business houses, banks, insurance and railroad offices, etc.,—and for first-class stenographers especially the demand exceeds the supply. A knowledge of these useful arts will therefore prove a strong recommendation for confidential and lucrative positions.

**Elocution.**

No educational institution in the country surpasses Notre Dame in the facilities afforded to students for acquiring proficiency in elocution. The instruction is thorough, the exercises are practical, and the subjects of study exhibit judicious variety. These exercises are held in St. Cecilia Hall, which is peculiarly adapted for the purpose, being eligibly situated, large, and elegantly furnished. The exercises constitute an important part in the studies of young men who strive to cultivate, with success, literature, oratory and
the dramatic art. The approved methods of stimulating and developing the natural elocutionary powers are called into requisition as occasion seems to warrant. To this end the drama receives a due share of attention; from time to time an appropriate tragedy or comedy is rendered by students, on the stage of the new Music Hall, with all the customary accessories and appointments used in connection with dramatic performances. Four public exhibitions are given during the year, and public literary exercises are held seven times during the same period. An oratorical contest is one of the notable features marking the close of the year. For the purpose of encouraging and stimulating students to put forth their best efforts, premiums and gold medals are offered to those who most distinguish themselves. When all these things are duly considered, there need be no hesitation in repeating that "no educational institution in the country surpasses Notre Dame in the facilities offered to students for acquiring proficiency in elocution."

**Anatomy and Materia Medica.**

Young men desiring to prepare for the Medical profession will find opportunities to do so at Notre Dame. The Course of Studies in this department embraces Materia Medica, Anatomy, and Surgery. As a preparatory Course, that which is given here, under L. Neyron, M. D., a graduate of the Ecole de Médecine, Lyons, leaves nothing to be desired.

**Drawing and Painting.**

The University, which is becoming every year more widely and favorably known as an art center, enjoys ample facilities for imparting instruction in this branch. It possesses a large number of models, a fine studio, and qualified and zealous teachers of the art. The eminent artist Signor Luigi Gregori, of Rome, is still in charge of this Department.

**Music.**

This Department is complete in all its appointments. It has able Professors, and is divided into classes on the regular Conservatory system. An Orchestra of fifteen pieces, with an excellent
Quartette, and a Brass Band of twenty-five instruments are some of the leading features of the Instrumental Music Department.

Vocal Music, to which special attention has been paid, and which has contributed so much to the pleasure of the students during the past few years, will receive even more careful attention in future, and it is hoped that this branch will become every year more popular. Students will learn with pleasure that, during this coming year, the vocal classes will be under the direction of the distinguished virtuoso Prof. Kindig, a graduate of the Royal Conservatory of Munich.

Lecture Course.

Amongst the lectures for the coming Scholastic year we take pleasure in announcing a course of twelve, by Prof. Albert Gunnlösgen, on the subject of Comparative Philology. Prof. Gunnlösgen, who has devoted a life-time to the study of linguistics, is well known as a contributor to prominent literary and scientific periodicals in Europe and America.

A course of twenty lectures, on Political Economy and Political Science, will also, during the winter, be delivered by Prof. John G. Ewing, of the regular Faculty.

Reading-Rooms.

The lower floor of the new Music Hall is divided into large and neatly furnished Reading Rooms for the benefit of the Senior and Junior departments. These reading rooms are supplied with books and periodicals from the library, and students have access to them during the hours of recreation.

The Lemonnier Library

continues to receive contributions from liberal friends, and now numbers over 25,000 volumes. A reading room has been opened in connection with the Library, in which the leading periodicals of Europe and America are to be found on file. The members of the Library Association desire to give their Alma Mater a collection of books which can stand comparison with those possessed by any other educational establishment of the United States; therefore they call on the friends of the University to assist them by donations of books, pamphlets, periodicals and manuscripts. All contributions should be addressed to the Librarian of the Lemonnier Library, Notre Dame University, Notre Dame, Indiana.
ACADEMY OF MUSIC. Dedicated June 21, 1882.
Minim Department.

For the care and training of boys under the age of thirteen, there has been established a Department to which the most scrupulous attention has always been paid by the College authorities; it is known as the Minim Department, and has ever been one of the greatest objects of interest to the Faculty as well as to all persons visiting Notre Dame.

Thorough and comprehensive instruction in all the elementary branches of an English education is here imparted, together with a rudimentary knowledge of Latin, French and German. Vocal Music and Drawing form no extra charges. The pupils of this Department are taught by Sisters of the Holy Cross, under whose maternal and tender care they pass nearly the entire day. During the hours of recreation, and while in the refectory and dormitory, they are under the charge of kind and efficient Prefects.

Discipline.

The following is the order of the day: Rising, at half-past six; toilet, etc.; seven, breakfast, after which there is a short time given for exercise in the Campus; half-past seven, study; half-past nine, recreation and lunch; ten, study; a quarter to twelve, toilet; twelve, dinner, followed by recreation; half-past one, study; half-past three, recreation and lunch; half-past six, supper and recreation; half-past eight, retiring. From this it may be seen that while the Minims devote never less than six hours a day to study, they are never more than two hours in succession in the class-room. The recreation and exercise in the fresh air, between each two hours of study, unbend the mind and prepare the boys to return to their classes refreshed and ready for work.

The Minims are always under supervision, during the hours of recreation, as well as in the class-room and study-hall. The presence, however, of the Prefects is far from being a restraint on the amusements of the boys; for while it is the duty of the Prefects to
insist that their young charges shall always keep within the limits of the strictest propriety, they, at the same time, take part in all sports, organize games, and do everything in their power to foster a love of healthful exercise. The play-ground consists of a fine level, four-acre field, well supplied with turning-poles, swings, ladders, rings, parallel-bars, and all other necessary gymnastic apparatus. That the boys make good use of them can best be seen from their healthy, happy appearance, which invariably attracts the notice of visitors.

Connected with the play-ground is a fine brick play-hall, 160 feet long, heated by steam. There the boys play in rainy or cold weather. In this building is one of the finest hand-ball alleys at Notre Dame. Adjoining the grounds is a large orchard to which the Minims have access in proper season. They are allowed so many privileges of a similar nature that, among the students of the other departments, they are often pleasantly spoken of as the "privileged class of the little college world." The Sisters preside at the toilet; they clean and mend the clothing, see to all the needs and to the comfort and convenience of the Minims. Baths are taken every Saturday. Underclothing is changed regularly twice a week. Great care is taken that the boys be neatly dressed, and that the clothing be suitable for the season. As the Sisters take entire charge of all these details, boys six years of age are received. They are separated from the larger Minims, and enjoy all desirable privileges.

Societies.

There are two societies in the Minim Department: that of the Guardian Angels of the Sanctuary, which has for its object to supply servers for the Church offices; and the Sorin Association, which has been established with a view to give the pupils a start, as early as possible, in Elocution. The Society is in charge of one of the Professors, who finds it a pleasant duty to draw out the talent of these interesting young orators. Meetings are held once a week, after school hours. These meetings are a source of pleasure as well as of profit. The members prepare original composi-
tions, deliver declamations, are trained to debate, etc. Only the best behaved and more advanced in studies are admitted to membership. To encourage this young Literary Society a Gold Medal is annually awarded at Commencement, for Elocution, to the most deserving member.

General Remarks.

The discipline to which the Minims are subjected is much milder than that which is suited to students more advanced in age. Recourse is scarcely ever had to punishment. Those in charge endeavor to govern by kindness and gentleness, and by appealing to the boys' sense of honor. The names of all whose conduct and application to studies are satisfactory appear under the heads of Roll of Honor and Class Honors in the Scholastic, a paper published weekly at Notre Dame. To find his name mentioned in these rolls is found to be as great a reward for the deserving pupil, as its non-appearance is a punishment for the undeserving.

Then, again, there is a Gold Medal awarded at the end of two full years to all whose deportment has been unexceptionable during that period. As this fact is made known to the Minim immediately after his entrance, he generally endeavors to shape his conduct with a view to receiving an "Honor." The greatest care is taken to form their young hearts to habits of virtue, and to inculcate the practice of refined manners. Every effort is made to foster respect and affection for parents, to whom they are expected to write once a week.

Not the least of the advantages enjoyed by the Minims is their complete separation from the larger students. An elegant and commodious building, known as St. Edward's Hall, affording ample accommodation for over one hundred pupils, is devoted to their use. It is four stories in height, ninety-five feet long and forty-five wide; heated by steam, supplied throughout with the Edison incandescent electric light, and provided with hot and cold water. The ceilings in the Study Hall, Class Rooms, and sleeping apartments are fifteen feet high. The windows are large and numerous, affording abundant light and ventilation. The Study Hall commands a charming view from each of its eleven
Study Hall.
large windows. It is tastefully decorated with statuary, beautiful pictures, choice plants and beautiful flower caskets, etc. Besides the pleasure the Minims derive from studying in this bright, beautiful hall, their habits and tastes are cultured by coming into contact with such refining objects. Fronting the building is a handsome park, which, with its sparkling fountain, rare trees and flowers, adds not a little to the beauty of St. Edward's Hall, as well as to the happiness of the Minims.

These remarks, which have been made to satisfy parents and others who frequently write for more detailed information, will show that while the Minims have every possible advantage to aid them in acquiring a good, solid education, they have also a most happy home where they enjoy the same ease and freedom as they would under the care of their mothers.

RELIGIOUS.

Society of the Holy Childhood.

The primary object of the Society of the Holy Childhood, of which this Society forms a part, is to offer an opportunity to children throughout the Christian world to contribute their share towards the redemption of pagan children from the darkness of heathenism. The monthly contributions are small, but the aggregate is considerable, while thousands of children are by this means trained up to habits of charity.

ATHLETIC.

The Hoynes Light Guards.

A few years since the State of Indiana supplied the University with 100 stand of arms and necessary accoutrements, including bayonets, scabbards, belts, cartridge-boxes, etc., for the use of students who might wish to organize military companies. These arms are breech-loaders (Sharp's rifles), and from year to year they are brought into requisition by students who voluntarily form military organizations, and learn the maneuvers, manual of arms, and all the ordinary evolutions of the United States Army, as taught in Upton's Tactics. During the last scholastic year two of these organizations existed at Notre Dame, one composed of Seniors and the other of Juniors. They were tastefully uniformed, and the high degree of proficiency in the use of arms attained by them was a subject of general remark and compliment. The authorities of the University duly encourage such organizations on account of the salutary physical exercise they afford, the respect for wholesome discipline they tend to inculcate, and the manly bearing they serve to promote. The officers during the past year were as follows:

William Hoynes, Colonel.

is the title of a neat 16-page paper, devoted to the interests of the students, which is published at the University every week during term time. This journal opens a field for young writers, who might otherwise, for want of a proper medium, allow their talents to remain inactive.

The Scholastic contains articles of an instructive and literary character, interesting Biographical Sketches, Essays, Poetry, Notes on Art, Music, Science and Literature, Notices of new publications, etc., etc.

In addition to its literary features, The Scholastic has a local importance for students, their parents, and all who have attended class at the University in times past, on account of the weekly summary of events transpiring at Notre Dame, personal notices of former students, Rolls of Honor, Class Honors, Lists of Excellence, etc., which appear in its columns every week. Reports relative to the arrangement of classes, the promotion of the more talented and energetic students, etc., also find a place in this paper, and keep parents and others informed on all that concerns their children and friends.

It will be the endeavor of the Editors, during the coming year, to merit the encouragement given the paper in the past, and the encomiums bestowed upon it by the press in general.

$1.50 PER ANNUM, Postpaid,

Address, THE NOTRE DAME, SCHOLASTIC,
Notre Dame, Indiana.
NOW entering upon its 31st year of active educational work, St. Mary's Academy for Young Ladies has earned the reputation of being one of the most thoroughly equipped and successful institutions in the United States. The location is on the dividing ridge of the St. Lawrence and Mississippi river systems, in the highest and healthiest part of the State.

The Academy buildings — large, well ventilated and commodious, heated with steam, supplied with hot and cold water, and with fire-escapes of the latest and best kind—are beautifully situated on an eminence overlooking the picturesque banks of the St. Joseph River.

All the branches of a thorough English and Classical education are taught by a Faculty of competent teachers, forty-two in number. French and German, Plain Sewing, and every variety of Fancy Needlework, are taught without extra charge. Book-Keeping in the regular course; Phonography and Type-Writing extra.

**THE CONSERVATORY OF MUSIC**

is conducted on the plan of the best classical Conservatories of Europe. Three instrumental lessons and one in theory, with five in general singing class, weekly, are included in the regular pension; extra practice, *pro rata*.

**THE ART DEPARTMENT**

is modeled after the best Art Schools of Europe. In the schools of Painting and Music, pupils may pursue a special course.

**PREPARATORY AND MINIMUM DEPARTMENTS.**

Pupils who need primary training, and those of tender age, are here carefully prepared for the Academic courses.
